

Hydraulic Valves Industrial Standard

ENGINEERING YOUR SUCCESS.

WARNING – USER RESPONSIBILITY

FAILURE OR IMPROPER SELECTION OR IMPROPER USE OF THE PRODUCTS DESCRIBED HEREIN OR RELATED ITEMS CAN CAUSE DEATH, PERSONAL INJURY AND PROPERTY DAMAGE.

This document and other information from Parker-Hannifin Corporation, its subsidiaries and authorized distributors provide product or system options for further investigation by users having technical expertise.

The user, through its own analysis and testing, is solely responsible for making the final selection of the system and components and assuring that all performance, endurance, maintenance, safety and warning requirements of the application are met. The user must analyze all aspects of the application, follow applicable industry standards, and follow the information concerning the product in the current product catalog and in any other materials provided from Parker or its subsidiaries or authorized distributors.

To the extent that Parker or its subsidiaries or authorized distributors provide component or system options based upon data or specifications provided by the user, the user is responsible for determining that such data and specifications are suitable and sufficient for all applications and reasonably foreseeable uses of the components or systems.

In this catalogue, page layout and drawing methods may differ due to changes in data processing. Erroneous data cannot be excluded despite careful revision. We do therefore not accept any liability for the exact compliance.

Offer of Sale

Please contact your Parker representation for a detailed "Offer of Sale".

Introduction

Product index, system solutions, Drive Controlled Pump, explosion-proof valves

1**Directional Control Valves**

Seated valves, spool valves, direct and pilot operated

2**Proportional DC Valves**

Standard, high repeatability, VCD® performance

3**Pressure Valves**

Subplate and screw-in mounting

4**Flow Valves**

Throttle and flow control valves, subplate and screw-in mounting

5**Check Valves**

Shuttle valves, direct and pilot operated check valves, subplate and screw-in mounting

6**Sandwich Valves**

For pressure, check and flow functions

7**Slip-In Cartridge Valves**

According to ISO 7368, with pressure, directional, flow and check functions

8**SAE Flange Valves**

For pressure, directional, flow and check functions

9**Valves for Pipe Mounting**

With pressure, directional, flow and check functions

10**Electronics**

Amplifiers, axis controllers and accessories

11**Accessories**

Subplates, pressure gauge valves, pressure switches, pressure intensifiers

12

Product index, by function	1-4
System solutions	1-6
Drive Controlled Pump	1-7
Explosion-proof valves	1-11
Machine directive – position papers	1-13

1

Series	Description	Page
2F1C	2-way variable flow control valve	5-14
A	Subplates for DC valves	12-7
A10	Adaptor plate for regenerative and hybrid valves	12-34
A102	Subplate for pressure valves	12-11
BK	Bolt kit	12-38
C / 9C	Check valves, direct operated	10-41
C*A	2-way slip-in cartridge valve without auxiliary function	8-8
C*B	2-way slip-in cartridge valve with stroke limiter	8-9
C*C	2-way slip-in cartridge valve for pilot system mounting	8-11
C*F	2-way slip-in cartridge valve for pressure relief function	8-14
C*G	2-way slip-in cartridge valve for pressure relief function plus pilot system mounting	8-15
C*H	2-way slip-in cartridge valve with stroke limiter	8-16
C*V	2-way slip-in cartridge valve with shuttle valve	8-19
C*W	2-way slip-in cartridge valve with shuttle valve	8-20
C10C*E	2-way slip-in cartridge valve with position control	8-89
C1DB	2-way slip-in cartridge valve, check valve	8-79
C4V	Check valve, direct operated	6-13
C4V	Check valve, pilot operated	6-18
C5V	Check valve, direct operated, SAE flange	9-41
CB	Cartridge block	12-30
CE, CP	2-way slip-in cartridge valve without cover	8-4
CM	Check valve, direct operated	7-52
Compax3F	Electrohydraulic axis controller	11-22
CPOM	Check valve, pilot operated	7-61
CPS	Check valve, pilot operated	6-16
CS	Check valve, direct operated	6-7
CS06	Sandwich plate	12-26
D*1FB	DC valve, pilot operated, proportional, with/without OBE	3-24
D*1FC	DC valve, pilot operated, proportional	3-64
D*1FC	DC valve, pilot operated, proportional, with EtherCAT	3-75
D*1FP	DC valve, pilot operated	3-99
D*1FP	DC valve, pilot operated, with EtherCAT	3-110
D*1VW	DC valve, pilot operated	2-61
D*1VWR	Regenerative and hybrid valve, pilot operated	2-74
D*1VWZ	Regenerative and hybrid valve, pilot operated	2-74
D11P	DC valve, direct operated	2-85
D1FB	DC valve, direct operated, proportional, with/without OBE	3-3
D1FC	DC valve, direct operated, proportional	3-48
D1FC	DC valve, direct operated, proportional, with EtherCAT	3-75
D1FP	DC valve, direct operated	3-78
D1FP	DC valve, direct operated, with EtherCAT	3-110
D1FV	Pressure reducing valve, proportional, with/without OBE	3-40
D1MW	DC valve, direct operated	2-33
D1SE	Seat valve, 3/2-way	2-2
D1VA	DC valve, direct operated, pneumatically	2-96
D1VL	DC valve, direct operated, hand lever	2-100
D1VP	DC valve, direct operated, hydraulically	2-85
D1VW	DC valve, direct operated	2-5
D1VW	DC valve, direct operated, with inductive position control	2-19
D1VW 8W	DC valve, direct operated, 8 watt	2-13
D1VW Ex	DC valve, direct operated, explosion proof	2-28

Series	Description	Page
D30FP	DC valve, pilot operated	3-92
D30FP	DC valve, pilot operated, with EtherCAT	3-110
D31DW	DC valve, pilot operated	2-61
D31NW	DC valve, pilot operated	2-61
D31NWR	Regenerative and hybrid DC valve, pilot operated	2-74
D3DL	DC valve, direct operated, hand lever	2-100
D3DP	DC valve, direct operated, hydraulically	2-85
D3DWR	Regenerative and hybrid valve, direct operated	2-74
D3FB	DC valve, direct operated, proportional, with / w/o OBE	3-14
D3FC	DC valve, direct operated, proportional	3-56
D3FC	DC valve, direct operated, proportional, with EtherCAT	3-75
D3FP	DC valve, direct operated	3-85
D3FP	DC valve, direct operated, with EtherCAT	3-110
D3MW	DC valve, direct operated	2-55
D3W	DC valve, direct operated	2-39
D3W	DC valve, direct operated, with inductive position control	2-46
D4L	DC valve, direct operated, hand lever	2-100
D4P	DC valve, direct operated, hydraulically	2-85
D4S	Seat valve, pipe mounting	10-24
D4S	Seat valve, subplate mounting	6-21
D51*	Cover plate	12-28
D9L	DC valve, direct operated	2-100
D9P	DC valve, direct operated	2-85
DSBA	Pilot valve with preload valve	8-25
DSDU	Pressure reducing valve, pilot operated, TÜV certificate	8-42
DUR*L06	Flow control valve, proportional, 2-way	5-20
EVSA	Pressure reducing valve, direct operated	4-15
EX-M05	Test unit	11-44
F / 9F	Throttle check valves	10-37
F5C	Throttle valve, proportional, SAE flange	9-30
FM	Throttle check valve	7-40
FS	Throttle check valve	5-6
GFG2	Flow control valve, 2-way	5-10
H06	Sandwich plate	12-22
H10	Sandwich plate for regenerative function	12-36
LCM	Pressure compensator	7-39
MSP	Multi-station manifold	12-12
MV / 9MV	Needle valves	10-33
MVI	Check und throttle valve	5-2
N / 9N	Needle valves	10-35
NS	Needle valve	5-4
PAC120	PLC for electrohydraulic controls	11-38
PACHC	Electrohydraulic control module	11-41
PADA	Adaptor plate	12-21
PCMS	Flow control valve, 2-way	5-8
PCD00	E-module for proportional pressure flow control valves	11-10
PCM / 9PCM	Flow control valves	10-39
PID00	Axis controller	11-18
PRDM	Pressure reducing valve, direct operated	7-22
PRM	Pressure reducing valve, pilot operated	7-27
PRPM	Pressure reducing valve, pilot operated, proportional	7-35
PSB	Pressure switch	12-42
PWD00	E-module for proportional valves	11-2
PWDXX	E-module for proportional valves with position transducer	11-6
PZD00	E-module for command signal	11-14

Product index by function see pages 4-5.

Series	Description	Page
R / RS*E	Pressure relief valves, pilot operated, cartridge	8-36
R06M	Pilot valve with pressure relief function	8-21
R1E02	Pressure relief valve, direct operated	4-18
R4R	Pressure reducing valve, pilot operated, pipe mounting	10-8
R4R	Pressure reducing valve, pilot operated, subplate mounting	4-83
R4R*P2	Pressure reducing valve, pilot operated, proportional, pipe mounting	10-19
R4R*P2	Pressure reducing valve, pilot operated, proportional, subplate mounting	4-95
R4S	Sequence valve, pilot operated, subplate mounting	4-75
R4U	Unloading valve, subplate mounting	4-69
R4V	Pressure relief valve, pilot operated, pipe mounting	10-2
R4V / R6V	Pressure relief valves, pilot operated, subplate mounting	4-21
R4V / R6V	Pressure relief valves, pilot operated, proportional, subplate mounting	4-49
R4V / R6V	Pressure relief valves, pilot operated, TÜV certificate, subplate mounting	4-30
R4V / R6V*P*	Pressure relief valves, pilot operated, proportional, OBE, subplate mounting	4-55
R4V*P2	Pressure relief valve, pilot operated, proportional, pipe mounting	10-14
R5P	Pressure compensator, 3-way, SAE flange	9-34
R5S	Sequence valve, pilot operated, SAE flange	9-12
R5U	Unloading valve, pilot operated, SAE flange	9-7
R5V*P2	Pressure relief valve, pilot operated, proportional, SAE flange	9-15
RDM	Pressure relief valve, direct operated	7-9
RE*E*T	Pressure relief valve, pilot operated, proportional, OBE, cartridge	8-49
RE*E*W	Pressure relief valve, pilot operated, proportional, cartridge	8-45
RE06M*T	Pressure relief valve, direct operated, proportional, OBE, subplate mounting	4-43
RE06M*W	Pressure relief valve, direct operated, subplate mounting	4-39
RH	Check valve, pilot operated	10-43
RK / RB	Check valve, threaded, block mounting	6-4
RM	Pressure relief valve, pilot operated	7-13
RPDM	Pilot valve, proportional, with pressure relief function	8-23
RS06M	Pilot valve with pressure relief function	8-22
S06M	Pilot valve with pressure sequence	8-27
SCPSD	Pressure switch, electronically	12-47
SD500	Pressure intensifier	12-53
SPD	Subplate for DC valve	12-2
SPP	Subplate for pressure valves	12-8
SPV / SPZ	Check valve, threaded	6-11
SPZBE	Check valve, threaded	6-9
SSR	Shuttle valve, block mounting	6-2
SVLA	Check valve, pilot operated, subplate mounting	8-28
SVLB	Check valve, pilot operated, cartridge	8-81

Series	Description	Page
TDA	Throttle valve, 2-way, proportional, pilot operated	8-106
TDC	High response valve, 2-way	8-113
TDP	VCD® performance valve, 2-way	8-121
TDW	Cartridge valve, 2/2-way, active controlled	8-95
TEA	Throttle valve, 2-way, proportional, pilot operated, with shut-off valve	8-110
TEP	High-response valve, 2-way, with shut-off valve	8-131
TFP	High-response valve, 2-way	8-142
TK	Tie rod kit	12-39
TPQ	High-response valve, 3-way	8-151
UR*E / US*E	Unloading valves, pilot operated, cartridge	8-55
UR06M / US06M	Pilot valves with unloading function	8-26
VB	Pressure relief valve	4-5
VBY	Pressure relief valve, pilot operated	4-10
VBY*K	Pressure relief valve, proportional	4-63
VM	Pressure reducing valve, direct operated	4-78
VMY	Pressure reducing valve, pilot operated, proportional	4-87
VS	Pressure relief valve	4-2
WM	Pressure gauge selector valve	12-40
Z1DW	Shut-off valve, direct operated	7-2
ZDR	Pressure reducing valve, pilot operated, high performance	7-31
ZDV	Pressure relief valve, pilot operated, high performance	7-18
ZNS	Counterbalance valve, pilot operated	7-69
ZRD	Throttle check valve, high performance	7-49
ZRE	Check valve, pilot operated, high performance	7-66
ZRV	Check valve, direct operated, high performance	7-58
ZSRA / ZSRB	Shuttle valves, sandwich plate	8-28
ZUDB	Pressure relief valve, sandwich plate	8-24

Product index by function see pages 4-5.

Product Index by Function

	Pilot operated, proportional, cartridge	RE*E*W	8-45
	Pilot operated, proportional, OBE, cartridge	RE*E*T	8-49
	Pilot operated, proportional, subplate mounting	R4V / R6V	4-49
		R4V*P2	10-14
Pilot operated, proportional, SAE flange	R5V*P2	9-15	
Pilot operated, TÜV certificate, subplate mounting	R4V / R6V	4-30	
Pilot operated, TÜV certificate, cartridge	DSDU	8-42	
Pressure reducing valve	Direct operated, subplate mounting	VM	4-78
	Direct operated, sandwich plate	PRDM	7-22
	Proportional, with/without OBE, subplate mounting	D1FV	3-50
	Pilot operated, high performance, sandwich plate	ZDR	7-31
	Pilot operated, sandwich plate	PRM	7-27
	Pilot operated, pipe mounting	R4R	10-8
	Pilot operated, subpl. mounting	R4R	4-83
	Pilot operated, proportional, subplate mounting	VMY	4-87
	Pilot operated, proportional, pipe mounting	R4R*P2	10-19
	Pilot operated, proportional, subplate mounting	R4R*P2	4-95
Pressure reducing valve	Pilot operated, proportional, sandwich plate	PRPM	7-35
Pressure switch	Electro-hydraulic	PSB	12-42
	Electronics	SCPSD	12-47
Pressure intensifier		SD500	12-53
Pressure compensator	2-way, sandwich plate	LCM	7-39
	3-way, SAE flange	R5P	9-34
Sequence valve	Pilot operated, subplate mounting	R4S	4-75
	Pilot operated, SAE flange	R5S	9-12
Servo drive	For closed loop position and force control	Compax3F	11-22
Electronics	For proportional pressure/flow control valves	PCD00	11-10
	For proportional valves	PWD00	11-2
		PWDXX	11-6
For command signal processing	PZD00	11-14	
Pressure gauge valve		WM	12-40
Test unit	For Parker prop. and servo proportional valves with OBE	EX-M05	11-38

Alphanumeric product index see pages 2-3.

Function	Description	Series	Page
Servo proportional valve	Direct operated, subplate mounting	D1FP	3-78
		D3FP	3-85
	Direct operated, with EtherCAT, subplate mounting	D*FP	3-110
	Pilot operated, subpl. mounting	D*1FP	3-99
	Pilot operated, with EtherCAT, subplate mounting	D*1FP	3-110
	Pilot operated, subpl. mounting	D30FP	3-92
	Pilot operated, with EtherCAT, subplate mounting	D30FP	3-110
	Pilot operated, proportional, 2-way, cartridge	TDC	8-113
	Pilot operated, VCD®, 2-way, cartridge	TDP	8-121
	Pilot operated, VCD®, 2-way, cartridge with shut-off valve	TEP	8-131
	Pilot operated, VCD®, 2-way, cartridge	TFP	8-142
Pilot operated, VCD®, 3-way, cartridge	TPQ	8-151	
Control module	for electrohydraulic controls	PACHC	11-41
Check valve	Direct operated, pipe mounting	C / 9C	10-41
	Direct operated, subplate mounting	C4V	6-13
		CS	6-7
	Direct operated, SAE flange	C5V	9-41
	Direct operated, sandwich plate	CM	7-52
		ZRV	7-58
	Block mounting	RK / RB	6-4
		SPV / SPZ	6-11
		SPZBE	6-9
	Pilot operated, block mounting	SVLB	8-81
	Pilot operated, pipe mounting	RH	10-43
	Pilot operated, subplate mounting	C4V	6-18
		CPS	6-16
		SVLA	8-30
Pilot operated, sandwich plate	CPOM	7-61	
Pilot operated, sandwich plate, high performance	ZRE	7-66	
Regenerative and hybrid DC valve	Pilot operated, subplate mounting	D*1VWR	2-74
		D*1VWZ	2-74
		D31NWR	2-74
	Direct operated, subplate mounting	D3DWR	2-74
Multi-station manifold		MSP	12-12
Bolt kit		BK	12-38
Counterbalance valve	Pilot operated, high performance, sandwich plate	ZNS	7-69
Programmable Logic Controller	for electrohydraulic controls	PAC120	11-38
Tie rod kit		TK	12-39
Flow control valve	2-way, subplate mounting	PCMS	5-8
	2-way, pipe mounting	PCM / 9PCM	10-39
	2-way, subplate mounting	2F1C	5-14
		GFG2	5-10
	Proportional, subplate mounting	DUR*L06	5-20
Pilot valve, pressure function	With unloading function, subplate mounting	UR06M / US06M	8-27
	With pressure relief function, subplate mounting	RS06M	8-22
		R06M	8-21
	With preload function, subplate mounting	DSBA	8-25
	With sequence function, subplate mounting	S06M	8-29
	Proportional, with pressure relief function, sandwich plate	RPDM	8-23
With pressure reducing function, sandwich plate	ZUDB	8-24	

Function	Description	Series	Page
Shuttle valve	Screw-in mounting	SSR	6-2
	Sandwich plate	ZSRA / ZSRB	8-30
Directional seat valve	3/2-way, subplate mounting	D1SE	2-2
	Pipe mounting	D4S	10-24
	Subplate mounting	D4S	6-22
DC valve, direct operated	Direct operated, hydraulically, subplate mounting	D11P	2-85
		D1VP	2-85
		D3DP	2-85
		D4P	2-85
		D9P	2-85
	Direct operated, solenoid, 8 watt, subplate mounting	D1VW 8 Watt	2-13
	Direct operated, solenoid, explosion proof, subplate mounting	D1VW	2-28
	Direct operated, solenoid, with inductive position control, subplate mounting	D1VW	2-19
		D3W	2-46
	Direct operated, solenoid, subplate mounting	D1VW	2-5
		D1MW	2-33
		D3MW	2-55
		D3W	2-39
	Direct operated, solenoid, sandwich plate	Z1DW	7-2
Direct operated, hand lever, subplate mounting	D1VL	2-100	
	D3DL	2-100	
	D4L	2-100	
	D9L	2-100	
Direct operated, pneumatically, subplate mounting	D1VA	2-96	
Direct operated, proportional, with CANopen, subplate mounting	D1FB	3-24	
	D3FB	3-24	
Direct/pilot operated, proportional, with OBE and position feedback, with EtherCAT, subplate mounting	D*FC	3-75	
Direct operated, proportional, with OBE and position feedback, subplate mounting	D1FC	3-48	
	D3FC	3-56	
Direct operated, proportional, with/without OBE, subplate mounting	D1FB	3-3	
	D3FB	3-14	
DC valve, pilot operated	Pilot operated, subplate mounting	D*1VW	2-61
		D31DW	2-61
		D31NW	2-61
Pilot operated, proportional, with OBE and position feedback, subplate mounting	D*1FC	3-64	
	Pilot operated, proportional, with/without OBE, subplate mounting	D*1FB	3-24
Sandwich plate		CS06	12-26
		H06	12-22
		H10	12-36

Alphanumeric product index see pages 2-3.

1

Parker is more than a supplier of excellent components. Together with our customers, we develop innovative systems solutions. In this industrial valves catalogue, we would like to point out to you our special competence in industrial manifold blocks. Our experienced, highly motivated team answers technical needs with complete, sound solutions.

Our performance spectrum comprises a complex understanding of the job, project management, design, and production, including final tests of manifold blocks on our modern, automated test beds. In addition we offer compact hydraulic axis controls.

When you entrust us with your system requirements, you can rely on getting an optimal solution from the Parker valves program with all components used in accordance with their characteristics. Furthermore you can rely on us taking full responsibility for all our valves, electronics and combined functions within the system.

In addition to customized solutions Parker also supplies standardized press controls as shown in our catalogue MSG11-3362/UK "Hydraulic Press Controls according to DIN EN ISO 16092-1/3 – Series PPCC". Contact your Parker representation for information and offerings concerning your hydraulics.

The Drive Controlled Pump system solutions from Parker are variable-speed hydraulic pump systems. They essentially consist of an AC drive unit (frequency controller and electronics), an asynchronous motor or synchronous servo motor, as well as a hydraulic pump. They enable the central, regulated hydraulic supply of all drives. Thus, they provide the exact power that is required in the cycle at all times.

The controller continuously records target values for the volume flow and/or pressure of the machine control system and compares them to actual pressure value. The drive speed of the electric motor is regulated so that the pump provides the exact amount of oil required to achieve the target value.

Features

- Suitable for 400 V supply
- Change-over pressure/volume flow control
- Optimum dimensioning of all components using the Parker DriveCreator software
- Standard interfaces for simple conversion of conventional pump systems
- Dual pump systems for larger volume flow possible – also as combination of variable and fixed displacement pumps

The Drive Controlled Pump Catalogue HY11-3352/UK contains complete product information including the ordering code. Detailed information on all Parker components can be found in the individual product catalogues (see next page).

- High precision and dynamic operation for flow and pressure control
- High energy efficiency through optimum adjustment to cycle requirements
- Low noise emissions through optimized pump design and speed adjustment

Combination vane pump/ synchronous servo motor with AC30V

Combination vane pump/ standard asynchronous motor with AC30V

Combination axial piston pump/standard asynchronous motor with AC30V

Components of the Drive Controlled Pump system

1

1. Pump

- Vane pump T7, catalogue HY29-0001, or
- Axial piston pump PVplus, catalogue MSG30-3245, or
- Combination of vane pump and axial piston pump
- Mounting accessories for the motor pump assembly:
 - Coupling
 - Pump bellhousing
 - Pump flange

2. Motor

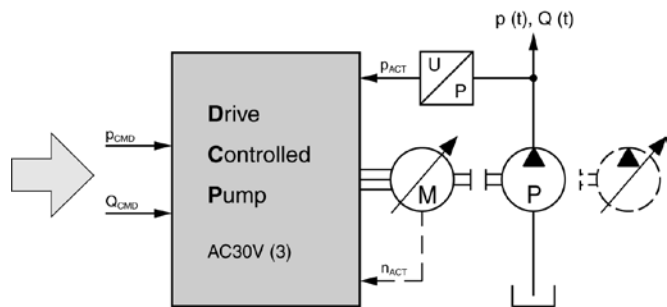

- Asynchronous standard motor or
- Synchronous servo motor, catalogue 192-061012 and 192-061013

3. AC Drive Controller

- AC30V, catalogue 192-300022

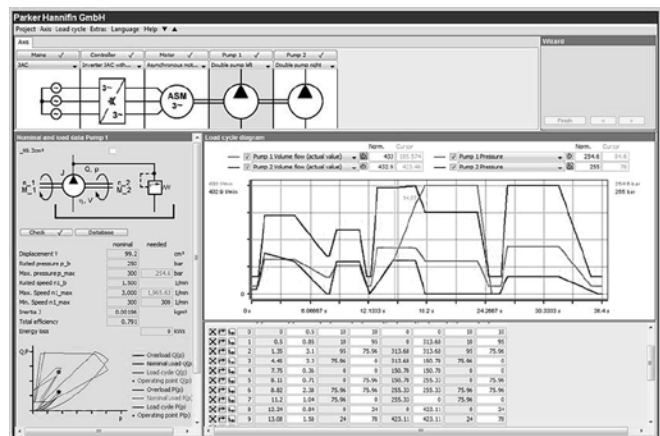

4. Accessories that may be required ¹⁾

- Shield connection
- Power cables
- Sensor cables
- Braking resistor
- Mains filters
- Pressure transducer

Parker DriveCreator

For optimum yet simple selection and dimensioning of the components Parker offers a unique software tool: the Parker DriveCreator. Firstly, the cycle data (pressure and flow) is entered. Subsequently, the optimum pump or combination of pumps is selected using this data, and then motor and drive suitable for the power consumption. The Parker DriveCreator calculates the best combination of components possible with the highest degree of energy efficiency.

¹⁾ Not included in the scope of delivery.

Vane pumps

Parker vane pumps are especially suited to variable speed applications. They enable very quick changes in pressure at a very high flow rate reproducibility and at a low noise level. High operating pressures of up to 320 bar and small dimensions reduce installation costs. Reduced pressure increases life-span.

Features

- High volumetric efficiency
- Low noise design
- High mechanical efficiency (generally over 94 %)
- Wide speed range (300–3,000 rpm)
- Impervious to particle contamination thanks to the double lip design

Axial piston pumps

Parker axial piston pumps are particularly characterized by their low noise level based on low-pulsation and a rigid housing. They are used if high peak pressures must be generated or high pressures must be maintained for long periods.

Features

- Low noise level
- Fast response
- Service-friendly
- High self-priming speed
- Thru drive for 100 % nominal torque

Standard asynchronous motors

The standard asynchronous motors are characterized by their versatility, robustness and high efficiency. They fulfill the IE2 efficiency standard (high efficiency), and therefore allow large energy savings and conserves the environment. The design offers maximum flexibility and minimum cost when installing.

Features

- Long life-span
- Thermistor motor protection incl.
- High overload reserves in continuous operation
- Low weight

1

Synchronous motors

The series MH and SMB of highly dynamic, brushless synchronous motors from Parker provides generously-sized mechanical components and low inertia. Thanks to the high quality of the Neodymium-Iron-Boron magnets and the encapsulation technique used to fasten them to the shaft, they can achieve high acceleration and withstand high overload without risking the demagnetization or detachment of the magnets.

Features

- Protection class IP64
- Ambient temperature -10/+40 °C
- High power density
- Lifetime-lubricated ball bearings
- Convection cooling, fan as option available

AC drive controller AC30V

As a central component of the Drive Controlled Pump, the AC30V series covers the entire spectrum of speed-regulated applications for asynchronous and synchronous motors. I/O-Module can be added easily if required. Modules that are required for the Drive Controlled Pump are equipped ex works.

Features

- Integrated hydraulic functions
- Integrated web server
- Sensorless vector control
- Safety torque off
- Software tool for configuration, commissioning, optimisation, programming and maintenance

Parker has expanded the range of applications for its explosion-proof industry hydraulic valves. All series are not only ATEX certified but also equipped with IECEx compliant solenoids.

Parker has certified the solenoids of these explosion-proof directional control valves in accordance with IECEx standard for equipment class 2G, as well ensuring ATEX compliance. Both the performance characteristics and the dimensions are identical to the values of the previous versions, so that the valves can also easily be used as a replacement in existing systems.

All valves offered in this chapter are ATEX certified for usage in zone 1 and 2.

The Explosion-Proof Valves Catalogue MSG11-3343/UK contains further product information and the ordering codes.

In the following we give you a short overview of our range of explosion-proof valves.

Directional control valve, series D1VW explosion proof

The D1VW with explosion proof solenoids is the ATEX version of the standard D1VW series. It provides high functional limits up to 60l/min in combination with a very low, energy-saving pressure drop. All explosion proof solenoids are DC design. The valves for AC operate with integrated rectifier.

Further information about this valve can be found in chapter 2.

Pilot operated directional control valve, series D*W*EE explosion proof

The D*1*W*EE with explosion proof solenoids is based on the standard D*1*W series. The pilot operated valves are available in 4 sizes from NG10 to NG32. All of them are piloted by a D1VW valve. All explosion proof solenoids are DC design. The valves for AC operate with integrated rectifier.

1

Direct operated proportional DC valve, series D1FB*EE explosion proof

The D1FB*EE series with explosion proof solenoids is the ATEX version of the standard D1FB series. The parameters can be saved, changed and duplicated in combination with the digital power amplifier PWD00A-400 (to be used in an explosion proof cabinet or outside of the hazardous area).

Features

- Spool/sleeve and spool/body
- High repeatability from valve to valve
- Low hysteresis
- Manual override

Pilot operated proportional DC valve, series D*1FB*EE explosion proof

The D*1FB*EE series with explosion proof solenoids is the ATEX certified version of the standard D*1FB series. The valves work with barometric feedback of the main stage to the pressure reducing pilot valve. The parameters can be saved, changed and duplicated in combination with the digital power amplifier PWD00A-400 (to be used in an explosion proof cabinet or outside of the hazardous area).

Features

- Progressive flow characteristics for sensitive adjustment of flow rate
- High flow capacity
- 4 sizes, NG10 to NG32

Proportional pressure reducing valve, series D1FV*EE explosion proof

The D1FV*EE series with explosion proof solenoids is based on the standard D1FV series. In combination with the digital power amplifier PWD00A-400 (to be used in an explosion proof cabinet or outside of the hazardous area), the parameters can be saved, changed and duplicated. The D1FV valves control the pressure in the A- or B-ports using the barometric feedback principle.

Features

- Barometric feedback
- High repeatability from valve to valve
- Low hysteresis
- Manual override

**Positions Paper of ISDE
regarding
Machinery Directive 2006/42/EC
EN ISO 13849**

Products made by the Industrial Systems Division Europe (ISDE) of Parker Hannifin GmbH are excluded from the scope of the machinery directive following the “CETOP Position Paper PP 07, Machinery Directive 2006/42/EC” (26.05.2010).

The only exceptions are products placed on the market as safety components for certain applications that have to be treated as machines within the meaning of the machinery directive 2006/42/EC.

All ISDE products that are listed in the following product index are designed and manufactured considering the basic and proven safety principles according to EN 13849-2:2012, so that the machine in which the products are incorporated can meet the essential health- and safety requirements.

Components that fall within the scope of EN ISO 13849-1:2015, *Safety of machinery – Safety related components of controls – part 1: General principles for design*, do not necessarily have to be placed on the market as safety components in accordance with the machinery directive 2006/42/EC. A component that is placed on the market but not as a safety component does not necessarily provide a lower safety level.

Confirmations for components to be proven components, e.g. for validation of hydraulic systems, can only be provided after an analysis of the specific application, as the fact to be a proven component mainly depends on the specific application.

MTTF_d values for our products are part of the technical data within our catalogue.

B10_d, DC and CCF values depend on cycle time, running time and system design. Therefore they can only be provided application specific.

Analogous to EN ISO 13849-1:2015, a maximum operating life T_M of 20 years can be assumed for the following industrial valves if the use is according to the data sheet resp. operating instructions and particularly in compliance with oil cleanliness. In the sense of preventive maintenance, an earlier replacement is recommended, no later however when exceeding 10 million switching cycles before the end of the operating life T_M.

When using the valves with fire-resistant pressure fluids HFC a reduced operating life must be assumed, depending on the respective application.

Characteristics / Ordering Code

2

The directional valve type D1SE is equipped with a wet pin armature solenoid, drain free tapered poppet and compatible with the standards DIN NG06, CETOP 03, and NFPA D03. Due to the 3/2-way design, port A is either connected with P or discharged in the tank. The neutral position (solenoid not activated) is taken automatically by a return spring. This position remains until the solenoid is energized.

The valve poppet including activation lever and the armature of the solenoid are located in the pressurized oil chamber of connection T. The valve poppet is designed such that there can be no differential area in its axial operational direction (opening, closing). Thus it is statically pressure-balanced so that the valve can be switched in both flow directions even under pressure.

The unit has an all-steel design, the important functional inner parts are hardened, the poppet and seat are grinded.

Surface finish	 Kit	 Kit	 Kit	 Kit
	BK375	4x M5x30 ISO 4762-12.9	7.6 Nm ±15 %	NBR: SK-D1SE-70 FPM: DK-D1SE-V70

Subplates and manifolds see chapter 12.

The space necessary to remove the plug per EN 175301-803, design type AF is at least 15 mm.
 The torque for the screw M3 of the plug has to be 0.5 to 0.6 Nm.

Characteristics

The NG06 directional control valve series D1VW provides high functional limits up to 80 l/min in combination with a very low, energy-saving pressure drop.

A wide variety of spool options allows to design an unlimited number of hydraulic circuits.

Versions with 8 watt coils, position control, ATEX approval, surface protection and connector variants are shown in the following chapters.

The valve is also available as sandwich type, see series Z1DW in chapter 7.

Valves with explosion proof solenoids Ex e mb II see series D1VW Explosion Proof in chapter 2 and catalogue MSG11-3343/UK.

1) Only for pressure compensation, no high flow possible.

The diagram below specifies the shift limits for valves with DC & AC solenoids. Valves with spool position “F” or “M” can only be operated up to 70 % of the limits. The specifications apply to a viscosity of 40 mm²/s and

balanced flow conditions. The shift limits can be considerably lower at unbalanced flow conditions. To avoid flow rates beyond the shift limits, a plug-in orifice can be inserted in the P-port.

Valve with standard DC solenoid

Measured with HLP46 at 50 °C, 90 % U_{nom} and warm solenoids

Valve with standard AC solenoid

Measured with HLP46 at 50 °C, 95 % U_{nom} and warm solenoids

Shift Limits / Response Times

Shift limit diagram - Soft shift with 1 DC solenoid

Shift limit diagram - Soft shift with 2 DC solenoids

Measured with HLP46 at 50 °C, 90 % U_{nom} and warm solenoids.

Response times D1VW Standard and Soft Shift [ms]

Standard solenoid	Orifice	Energize	De-energize
Standard DC	w/o	45 - 60	20 - 30
Standard AC	w/o	13	20
Standard DC with rectifier plug	w/o	60 - 70	70 - 90

Response times soft shift		2 solenoid valve 3 positions		2 solenoid valve 3 positions		1 solenoid valve 2 positions	
Code	Orifice size	Center position: Closed		Center position: Open		Energize	De-energize
		Energize	De-energize	Energize	De-energize		
S2	0.50 mm	200 - 750	310 - 650	220 - 400	350 - 750	90 - 350	160 - 500
S3	0.75 mm	180 - 300	300 - 400	200 - 350	300 - 500	90 - 350	130 - 350

The lower value applies to small flow rates and low pressure, the upper value to high flow rates and high pressure.

Step response times were obtained under the following conditions: HLP46 at 50 °C with the valve operating at nominal pressure and flow. Published response times are nominal and may vary with spool, flow, pressure and temperature.

Acceleration for orifice size 0.75, code "S3" (measured against a standard valve)

For even softer shifting, the proportional spools 081, 082, 101 and 102 can be used.

The space necessary to remove the plug per EN 175301-803, design type AF is at least 15 mm.
The torque for the screw M3 of the plug has to be 0.5 to 0.6 Nm.

Characteristics

The D1VW 8 Watt series is based on the standard D1VW design. The low watt, low current (<0.5 A) solenoid allows direct connection to a PLC or a bus knot. The valves are offered with standard solenoid connection (as per EN175301-803) and M12 x 1 connection. The version with M12 x 1 connection and LEDs is conform to the DESINA standard (**D**istribut**E**d and **S**tandardised **I**Nst**A**l-lation technology) for machine tools and manufacturing systems.

The torque for the screw M3 of the plug has to be 0.5 to 0.6 Nm.

The direct operated directional valves series D1VW with inductive position control are typically used in safety relevant applications. The start or end position can be monitored. The position control is available for single and double solenoid valves.

The fail-safe position of the directional valve during power failure is the spring offset or center position.

Please find detailed information on the machine directive in the position paper in chapter 1.

Attention:

The adjustment of the position control is factory set and sealed. Replacement and repairs can only be undertaken by the manufacturer.

Outputs: Open collector

Definitions

Start position monitored:

The valve is de-energized. The inductive switch gives a signal at the moment when the spool leaves the spring offset position (below 15 % spool stroke).

At the switching point the spool is located within the closed position. It is secured that only the flow paths of the offset position are granted.

End position monitored:

The inductive switch gives a signal before the end position is reached (above 85 % spool stroke).

The switch can only be located on the opposite side of the solenoid for direct operated valves. Please order plug M12x1 separately (see accessories, plug M12x1; order no.: 5004109).

¹⁾ Only guaranteed with screened cable and female connector

The space necessary to remove the plug per EN 175301-803, design type AF is at least 15 mm.

The torque for the screw M3 of the plug has to be 0.5 to 0.6 Nm.

The space necessary to remove the M12x1 female connector is at least 22 mm.

Attention:

The adjustment of the position control is factory set and sealed. Replacement and repairs can only be undertaken by the manufacturer.

¹⁾ Please order plug M12x1 separately (see accessories, plug M12x1; order no.: 5004109).

²⁾ Please order plug M12x1 separately. Straight plug recommended – no defined position possible for angled plug.

Characteristics

The D1VW with explosion proof solenoids is based on the standard D1VW series. The specific solenoid design allows the usage in hazardous environments.

The explosion proof class is

CE Ex II 2 G
Ex e mb IIC T4 Gb

for use in zone 1 and 2 (according to ATEX). Additionally the solenoids are IECEx compliant.

All explosion proof solenoids are DC design. The valves for AC operate with integrated rectifier.

For further explosion proof valves please refer to catalogue MSG11-3343/UK.

Download of the PDF file at www.parker.com/ISDE, see "Support".

Flow curve diagram

All characteristic curves measured with HLP46 at 50 °C.
 1) Only for pressure compensation, no high flow possible.

The diagram below specifies the shift limits for valves with AC and DC solenoids. The specifications apply to a viscosity of 40 mm²/s and balanced flow conditions. The

shift limits can be considerably lower at unbalanced flow conditions. To avoid flow rates beyond the shift limits, a plug-in orifice can be inserted in the P-port.

2

Shift limit diagram with DC solenoid

Characteristics

The D1MW is based on the D1VW series of directional control valves size NG06, but offers additional corrosion protection of the valve body, the solenoid coil and the anchor tube as well as the typical solenoid connections for the mobile market such as AMP Junior Timer and DT04-2P “Deutsch”.

Technical features

- High corrosion protection (optional)
- Solenoid connection:
 - Standard (as per EN175301-803)
 - AMP Junior Timer
 - DT04-2P “Deutsch”
- Robust design for rough applications
- Extended manual override with rubber cover (optional)

With AMP Junior Timer

Connector DT04-2P “Deutsch”

Surface finish	 Kit	 Kit	 Kit	 Kit
	BK375	4x M5x30 ISO 4762-12.9	7.6 Nm ±15 %	NBR: SK-D1VW-N-91 FPM: SK-D1VW-V-91

The space necessary to remove the plug per EN 175301-803, design type AF is at least 15 mm.
The torque for the screw M3 of the plug has to be 0.5 to 0.6 Nm.

The NG10 direct operated directional control valve series D3W provides high functional limits up to 150 l/min in combination with a low, energy saving pressure drop.

The wide variety of options includes soft shift anchor tubes for smooth operation.

Versions with position control, additional surface protection and connector variants are shown in the following chapters.

Flow curve diagram

All characteristic curves measured with HLP46 at 50 °C.

The diagrams below specify the shift limits for valves with DC and AC solenoids. Valves with spool position “F” or “M” can only be operated up to 70 % of the limits. The specifications apply to a viscosity of 40 mm²/s and

balanced flow conditions. The shift limits can be considerably lower at unbalanced flow conditions. To avoid flow rates beyond the shift limits, a plug-in orifice can be inserted in the P-port.

Shift limits, DC voltage

Measured with HLP46 at 50 °C, 90 % U_{nom} and warm solenoids.

Shift limits, AC voltage

Measured with HLP46 at 50 °C, 95 % U_{nom} and warm solenoids.

Shift Limits / Response Times

Shift limits soft shift

The diagrams below specify the shift limits. Valves with spool position “F” or “M” can only be operated up to 70 % of the limits. The specifications apply to a viscosity of 40 mm²/s and balanced flow conditions. The shift limits can

be considerably lower at unbalanced flow conditions. To avoid flow rates beyond the shift limits, a plug-in orifice can be inserted in the P-port.

Measured with HLP46 at 50 °C, 90 % U_{nom} and warm solenoids.

Response times D3W Soft Shift

Code	Orifice size	Energize	De-energize
(Standard)	-	105 ms (DC) 21 ms (AC)*	85 ms (DC) 35 ms (AC)*
S4	1.0 mm	320 ms	550 ms
S7	1.75 mm	160 ms	370 ms

Step response times were obtained under the following conditions: HLP46 at 50 °C with the valve operating at 175 bar and 65 l/min. Published response times are nominal and may vary with spool, flow, pressure and temperature.

Acceleration for different orifice sizes (archived against a valve without soft shift)

For even softer shifting, the proportional spools 081, 082, 101 and 102 can be used.

* For AC input and soft shift use rectifier plug.

	BK385	4x M6x40 ISO 4762-12.9	13.2 Nm ±15 %	NBR: SK-D3W-30 FPM: SK-D3W-V-30

The space necessary to remove the plug per EN 175301-803, design type AF is at least 15 mm.
The torque for the screw M3 of the plug has to be 0.5 to 0.6 Nm.

Characteristics

The direct operated valves series D3W with inductive position control are typically used in safety relevant applications. The start or the end position can be monitored. The fail-safe position of the directional valve during power failure is the spring offset position.

Please find detailed information on the machine directive in the position paper in chapter 1.

2

Attention:

The adjustment of the position control is factory set and sealed. Replacement and repairs can only be undertaken by the manufacturer.

M12 pin assignment

- 1 + U_s 19.2...28.8 V
- 2 Out B: normally open
- 3 0V
- 4 Out A: normally closed

Outputs: Open collector

Definitions

Start position monitored:

The valve is de-energized. The inductive switch gives a signal at the moment when the spool leaves the spring offset position (below 15 % spool stroke).
 At the switching point the spool is located within the closed position. It is secured that only the flow paths of the offset position are granted.

End position monitored:

The inductive switch gives a signal before the end position is reached (above 85 % spool stroke).

The switch can only be located on the opposite side of the solenoid for direct operated valves. Please order plug M12x1 separately (see accessories, plug M12x1; order no.: 5004109).

Position Control

Double solenoid valves

Definitions

Start position monitored:

The valve is de-energized. The inductive switch gives a signal at the moment when the spool leaves the center position (below 15 % spool stroke).

At the switching point the spool is located within the closed position. It is secured that only the flow paths of the offset position are granted.

End position monitored:

The inductive switch gives a signal before the end position is reached (above 85 % spool stroke).

Please order plug M12 x 1 separately. Straight plug recommended – no defined position possible for angled plug.

The flow curve diagram shows the flow versus pressure drop curves for all spool types. The relevant curve

number for each spool type, operating position and flow direction is given in the table below.

2

Flow curve diagram

All characteristic curves measured with HLP46 at 50 °C.

Shift limit diagram

The diagram below specifies the shift limits. Valves with spool position “F” or “M” can only be operated up to 70 % of the limits. The specifications apply to a viscosity of 40 mm²/s and balanced flow conditions. The shift limits can

be considerably lower at unbalanced flow conditions. To avoid flow rates beyond the shift limits, a plug-in orifice can be inserted in the P-port.

Measured with HLP46 at 50 °C, 90 % U_{nom} and warm solenoids.

	BK385	4x M6x40 ISO 4762-12.9	13.2 Nm ±15 %	NBR: SK-D3W-30 FPM: SK-D3W-V-30

The space necessary to remove the plug per EN 175301-803, design type AF is at least 15 mm.
The torque for the screw M3 of the plug has to be 0.5 to 0.6 Nm.
The space necessary to remove the M12x1 female connector is at least 22 mm.

Attention:

The adjustment of the position control is factory set and sealed. Replacement and repairs can only be undertaken by the manufacturer.

¹⁾ Please order plug M12x1 separately (see accessories, plug M12x1; order no.: 5004109).

²⁾ Please order plug M12x1 separately. Straight plug recommended - no defined position possible for angled plug.

The D3MW is a solenoid operated directional control valve size NG10 in 3-chamber design. It is direct operated by wet pin solenoids.

The D3MW is designed for mobile and marine applications.

It is based on the D3W series, but offers additional corrosion protection of the valve body, the solenoid coil and the anchor tube as well as the typical solenoid connections for the mobile market such as AMP Junior Timer.

Features:

- High corrosion protection (optional)
- Solenoid connection:
 - Standard (as per EN175301-803)
 - AMP Junior Timer
 - DT04-2P “Deutsch”
- Robust design for rough applications

Dimensions with AMP Connector (only C and D -style shown)

Dimensions with DT04-P2 "Deutsch" Connector (only C and D -style shown)

Surface finish	 Kit	 Kit	 Kit	 Kit
	BK385	4x M6x40 ISO 4762-12.9	13.2 Nm ±15 %	NBR: SK-D3W-N-30 FPM: SK-D3W-V-30

The space necessary to remove the plug per EN 175301-803, design type AF is at least 15 mm.
The torque for the screw M3 of the plug has to be 0.5 to 0.6 Nm.

The pilot operated valves are available in 4 sizes:

- D31DW NG10 (standard)
- D31NW NG10 (high flow)
- D41VW NG16
- D81VW NG25 (for port diameter up to 26 mm)
- D91VW NG25 (for port diameter up to 32 mm)
- D111VW NG32

All valves are piloted by a D1VW valve. Please see the separate ordering code for valves with position control.

The minimum pilot pressure must be ensured for all operating conditions of the directional valve.

Additionally spools with a P to T connection in the de-energized position need an external pressure supply (external inlet) or an integral check valve.

Valves with explosion proof solenoids Ex e mb II see catalogue MSG11-3343/UK.

⁴⁾ Not for spools 002, 007, 009, 014, 030 available.
⁵⁾ To be used in combination with rectifier plugs at 120 VAC / 230 VAC power supply.
⁶⁾ For hydraulic presses according to the safety regulations DIN EN ISO 16092-3, solenoid option "T" (without manual override) and accessories "I4N", "I5N" or "I6N" (start position monitored) are required.
⁷⁾ Please order female connector M12x1 separately (see accessories, female connector M12x1 (order no.: 5004109). The monitor switch has to be located on the side to which the spool moves from the spring offset position. For 4/3-way valves two switches are required.

Outputs: Open collector

Definitions

Start position monitored:

The valve is de-energized. The inductive switch gives a signal at the moment when the spool leaves the spring offset position (below 15 % spool stroke).

At the switching point the spool is located within the closed position. It is secured that only the flow paths of the offset position are granted.

End position monitored:

The inductive switch gives a signal before the end position is reached (above 85 % spool stroke).

Please order plug M12x1 separately (see accessories, plug M12x1; order no.: 5004109).

¹⁾ Only guaranteed with screened cable and female connector

The flow curve diagrams show the flow versus pressure drop curves for all spool types. The relevant curve

number for each spool type, operating position and flow direction is given in the tables below.

D111VW

Integral check valve in the P port

Mounting an integral check valve in the P port is necessary to build up pilot pressure for valves with P to T connection and internal pilot oil supply. The pressure difference at the integral check valve (see performance curves) is to be added to all flow curves of the P-port of the main valve. Directional valves with an integral check valve are available for the series D31NW, D41VW and D81VW.

Flow curve D31NW

Flow curve D41VW

Flow curve D81VW

Characteristics

The series of regenerative and hybrid directional control valves are available in four sizes:

Direct operated valve:

D3DWR NG10 Hybrid function with adaptor plate (see chapter 12)

Pilot operated valves:

D31NWR NG10 Hybrid function with adaptor plate (see chapter 12)

D41VWR, D41VWZ NG16

D91VWR, D91VWZ NG25

D111VWR, D111VWZ NG32

The innovative integrated regenerative function in the A-line allows energy saving circuits with differential cylinders. The hybrid version can switch between regenerative mode and standard mode.

Features

- Energy saving A-regeneration
- Switchable hybrid version

Characteristics

Hydraulically operated directional control valves are available in 5 sizes:

- D1VP*4L NG06 – operated via end caps
- D1VP*90 NG06 – operated via end caps and mounting interface (X, Y)
- D3DP NG10 – operated via mounting interface (X, Y)
- D4P NG16 – operated via mounting interface (X, Y)
- D9P NG25 – operated via mounting interface (X, Y)
- D11P NG32 – operated via mounting interface (X, Y)

Size NG06 (D1VP) is available in two different designs:

- D1VP*4L for operating pressure >10 bar (over tank pressure) with control ports in the end caps.
- D1VP*90 for operating pressure >15 bar with control ports in the end caps and mounting interface (X, Y).

All other series are operated only via mounting interface (X, Y).

The shifting time is depending on the pilot pressure. For safe operation the minimum pilot pressure has to be ensured in all operating conditions. The maximum pilot pressure varies from the maximum operating pressure in some sizes.

Characteristics

Pneumatically controlled directional control valves of series D1VA are based on the standard D1VW design.

The main spool is operated via an auxiliary spool of larger diameter. Thus enables low operating pressures from 3 to 5 bar.

Pneumatic connection via thread G1/8 in the end caps.

2

Characteristics

The D1VL is a 3 chamber, D3DL, D4L and D9L are 5 chamber 4/3- or 4/2-way directional control valves.

The hand lever is directly connected to the spool and can be located either on the A or B side. Spring offset and detent designs are available.

2 Directional control valves with hand lever are available in 4 sizes:

- D1VL NG06
- D3DL NG10
- D4L NG16
- D9L NG25

Features

- All hand lever parts stainless steel

* VCD® = Voice Coil Drive technology

Introduction**Introduction: Proportional DC Valves**

Proportional valves and servo proportional valves are characterized by a number of design features that determine their quality to fit into different applications. The main features are listed below.

Solenoid drive (proportional valves):

Solenoids operate unidirectionally against a spring, provide high force and are - because of high inductance - limited in their dynamics.

Voice Coil Drive® :

A moving coil in the field of a static permanent magnet operates bi-directionally. Springs are only needed to ensure the power-down position. The low inductance allows highest dynamics.

External electronics:

Valves without integrated electronics are less sensitive to vibration and high temperature. LVDTs always include integrated electronics.

Integrated electronics (onboard electronics - OBE):

Onboard electronics simplifies the installation and improves the repeatability from valve to valve.

LVDT (spool position feedback):

Closed loop control of the spool position improves the sensitivity and accuracy.

Direct operated (d.o.):

High hydraulic output can be achieved with low electric power input.

Pilot operated (p.o.):

Beyond the functional limits of direct operated valves hydraulic amplification is required.

Positive spool overlap:

To avoid load drifting in the zero position, spools with positive overlap are used.

Zero lap spools:

In closed loop circuits zero lap spools are used for an effective control of the spool at low position errors.

Spool/sleeve design:

For minimal hysteresis, high precision, and better wear resistance, the spool/sleeve design is preferred over the spool/body design.

Regenerative valves:

In applications with differential cylinders it is common to feed the return flow from the rod side of the cylinder back to the piston side to achieve higher velocity or lower pump flow. Parker differentiates between regeneration to the pressure level of the pump (P-regeneration) or directly to the piston area respectively the A-port of the valve (A-regeneration). The Parker regenerative valves use the advantageous A-regeneration.

Hybrid valves:

Regenerative valves with an integrated solenoid valve - to switch to the standard mode - are called Hybrid Valves at Parker. The regenerative mode is used for maximum velocity, the standard mode for maximum force.

Regenerative and hybrid valves are also available as on/off directional control valves.

Characteristics

The proportional directional valves D1FB (NG06) are available with and without onboard electronics (OBE).

D1FB OBE:

The digital onboard electronics is situated in a robust metal housing, which allows the usage under rough environmental conditions.

The nominal values are factory set. The cable connection to a serial RS232 interface is available as accessory.

D1FB for external electronics:

The parameters can be saved, changed and duplicated in combination with the digital power amplifier PWD00A-400.

The valve parameters can be edited with the common ProPxD software for both versions.

The D1FB valves can be ordered with spool/sleeve design (D1FB*0) for maximum precision as well as spool/body design (D1FB*3) for high nominal flow - see functional limit curves for maximum flow capability.

Valves with explosion proof solenoids Ex e mb II see catalogue HY11-3343.

ProPxD interface program

The ProPxD software permits comfortable parameter setting for the module electronics. Via the clearly arranged entry mask the parameters can be noticed and modified. Storage of complete parameter sets is possible as well as printout or record as a text file for further documentation. Stored parameter sets may be loaded anytime and transmitted to other valves. Inside the electronics a nonvolatile memory stores the data with the option for recalling or modification.

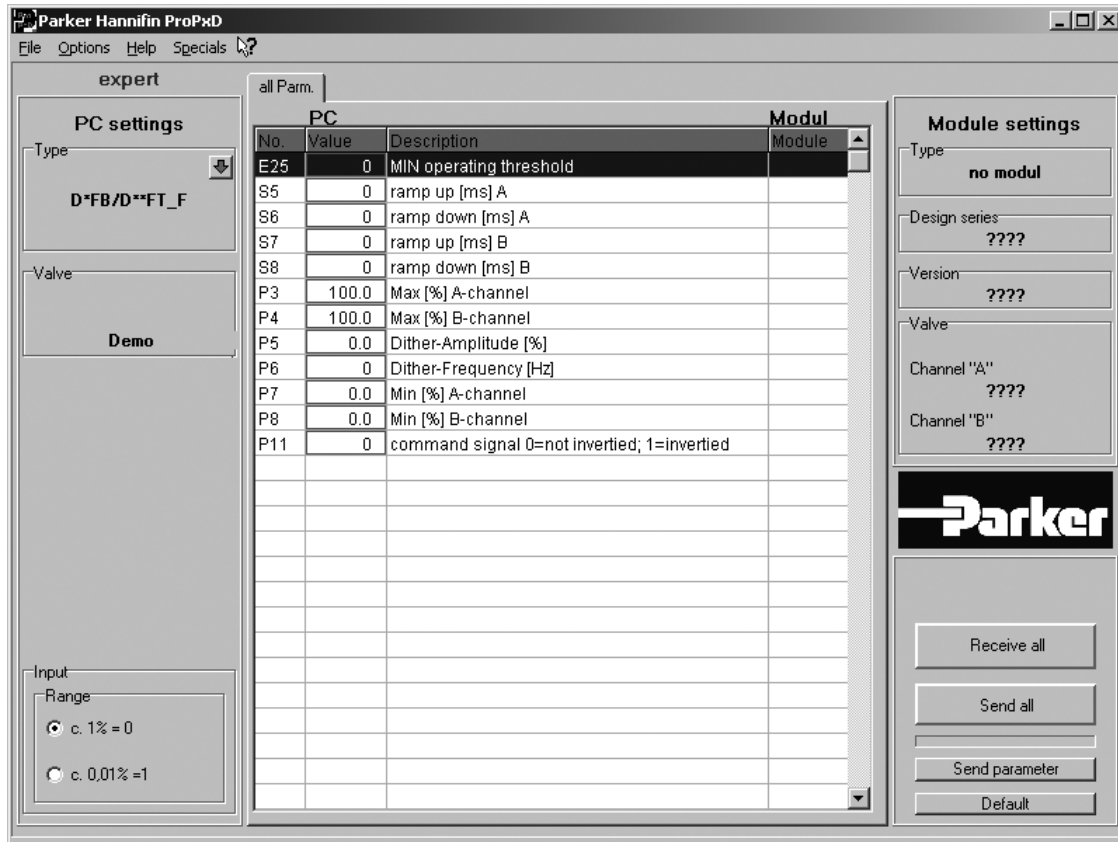

The PC software can be downloaded free of charge at www.parker.com/isde – see page “Support” or directly at www.parker.com/propxd.

Features

- Comfortable editing of all parameters
- Depiction and documentation of parameter sets
- Storage and loading of optimized parameter adjustments
- Executable with all actual Windows® operating systems from Windows® XP upwards
- Plain communication between PC and electronics via serial interface RS232C

The parametrizing cable may be ordered under item no. 40982923.

Characteristics

The proportional directional valves D3FB (NG10) are available with and without onboard electronics (OBE).

D3FB OBE

The digital onboard electronics is situated in a robust metal housing, which allows the usage under rough environmental conditions.

The nominal values are factory set. The cable connection to a serial RS232 interface is available as accessory.

D3FB for external electronics

The parameters can be saved, changed and duplicated in combination with the digital power amplifier PWD00A-400.

The valve parameters can be edited with the common ProPxD software for both versions.

The D3FB valves can be ordered with spool/sleeve design (D3FB*0) for maximum precision as well as spool/body design (D3FB*3) for high nominal flow - see functional limit curves for maximum flow capability.

Features

- Spool/sleeve and spool/body
- 3 command options for D3FB OBE:
+/- 10 V, 4...20 mA, +/- 20 mA
- High repeatability from valve to valve
- Low hysteresis
- Manual override
- Digital onboard electronics

ProPxD interface program

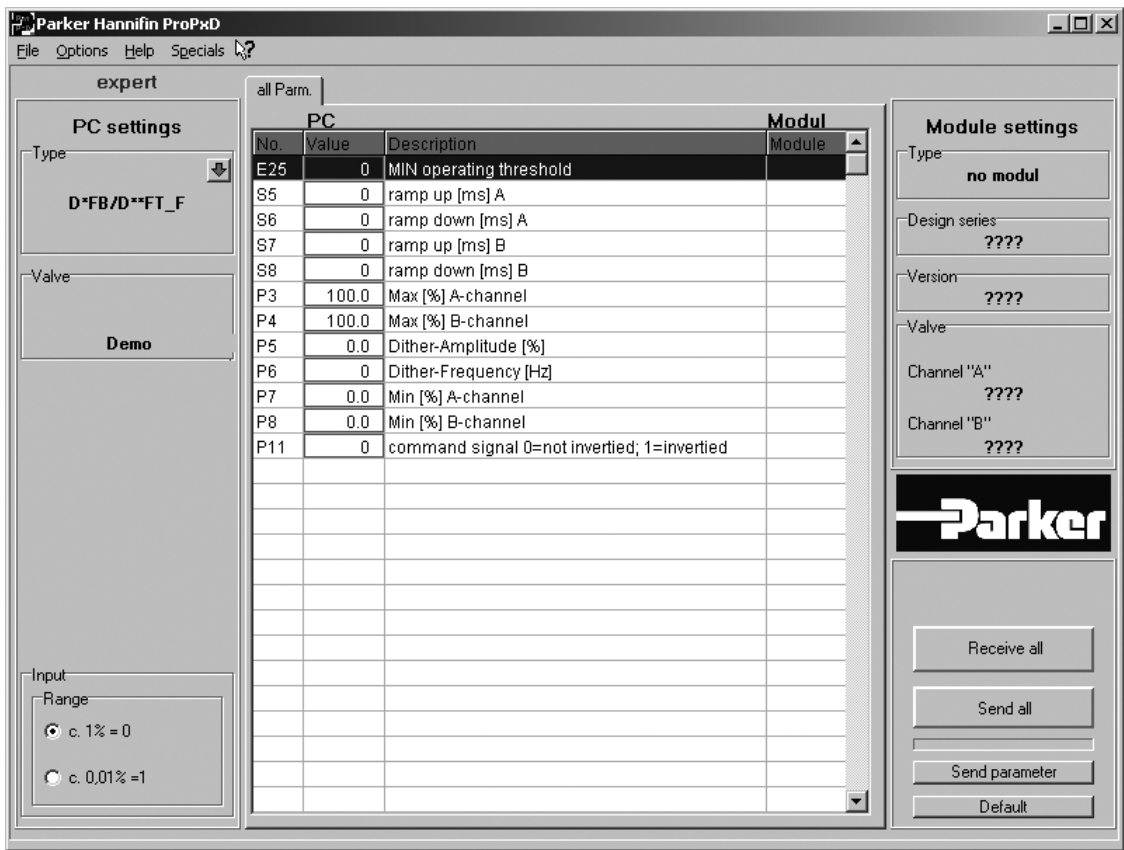

The ProPxD software permits comfortable parameter setting for the module electronics. Via the clearly arranged entry mask the parameters can be noticed and modified. Storage of complete parameter sets is possible as well as printout or record as a text file for further documentation. Stored parameter sets may be loaded anytime and transmitted to other valves. Inside the electronics a nonvolatile memory stores the data with the option for recalling or modification.

The PC software can be downloaded free of charge at www.parker.com/isde – see page “Support” or directly at www.parker.com/propxd.

Features

- Comfortable editing of all parameters
- Depiction and documentation of parameter sets
- Storage and loading of optimized parameter adjustments
- Executable with all actual Windows® operating systems from Windows® XP upwards
- Plain communication between PC and electronics via serial interface RS232C

The parametrizing cable may be ordered under item no. 40982923.

Characteristics

The pilot operated proportional directional valves D*1FB are available in 4 sizes:

- D31FB - NG10 (CETOP 05)
- D41FB - NG16 (CETOP 07)
- D91FB - NG25 (CETOP 08)
- D111FB - NG32 (CETOP 10)

The valves are available with and without onboard electronics (OBE).

3

D*1FB OBE

The digital onboard electronics is situated in a robust metal housing, which allows the usage under rough environmental conditions.

The nominal values are factory set. The cable connection to a serial RS232 interface is available as accessory.

D*1FB for external electronics

The parameters can be saved, changed and duplicated in combination with the digital power amplifier PWD00A-400.

The valve parameters can be edited with the common ProPxD software for both versions.

The D*1FB valves work with barometric feedback of the main stage to the pressure reducing pilot valve. The pilot control pressure of 25 bar allows high flow rates at maximum stability.

The innovative integrated regenerative function into the A-line (optional) allows energy saving circuits for differential cylinders. The hybrid version can be switched between regenerative mode and standard mode at any time.

Valves with explosion proof solenoids Ex e mb II see catalogue HY11-3343.

Characteristics

The proportional pressure reducing valves series D1FV are available with and without onboard electronics (OBE).

D1FV OBE

The digital onboard electronics is situated in a robust metal housing, which allows the usage under rough environmental conditions.

The nominal values are factory set. The cable for connection to a serial RS232 interface is available as accessory.

D1FV for external electronics

The parameters can be saved, changed and duplicated in combination with the digital power amplifier PWD00A-400. The value parameters can be edited with the common ProPxD software for both versions.

The D1FV valves control the pressure in the A- or B-ports using the barometric feedback principle.

Valves with explosion proof solenoids Ex e mb II see catalogue HY11-3343.

Download: www.parker.com/euro_hcd - see "Literature"

Technical Features

- Barometric feedback
- 3 command options for D1FV OBE: ± 10 V, 4...20 mA, ± 20 mA
- High repeatability from valve to valve
- Low hysteresis
- Manual override
- Pressure stages 25 bar and 45 bar

Supply voltage	[V]	12
Current consumption	[A]	2.2
Resistance	[Ohm]	4.4
Solenoid connection	Connector as per EN 175301-803 (code W), DT04-2P "Deutsch" connector (code J). Solenoid identification as per ISO 9461.	
Wiring min.	[mm ²]	3x1.5 (AWG 16) overall braid shield (code W), "Deutsch" connector DP4 2 Pin (code J)
Wiring length max.	[m]	50 recommended

¹⁾ If valves with onboard electronics are used in safety-related parts of control systems, in case the safety function is requested, the valve electronics voltage supply is to be switched off by a suitable switching element with sufficient reliability.

With electrical connections the protective conductor (PE ≡) must be connected according to the relevant regulations.

ProPxD interface program

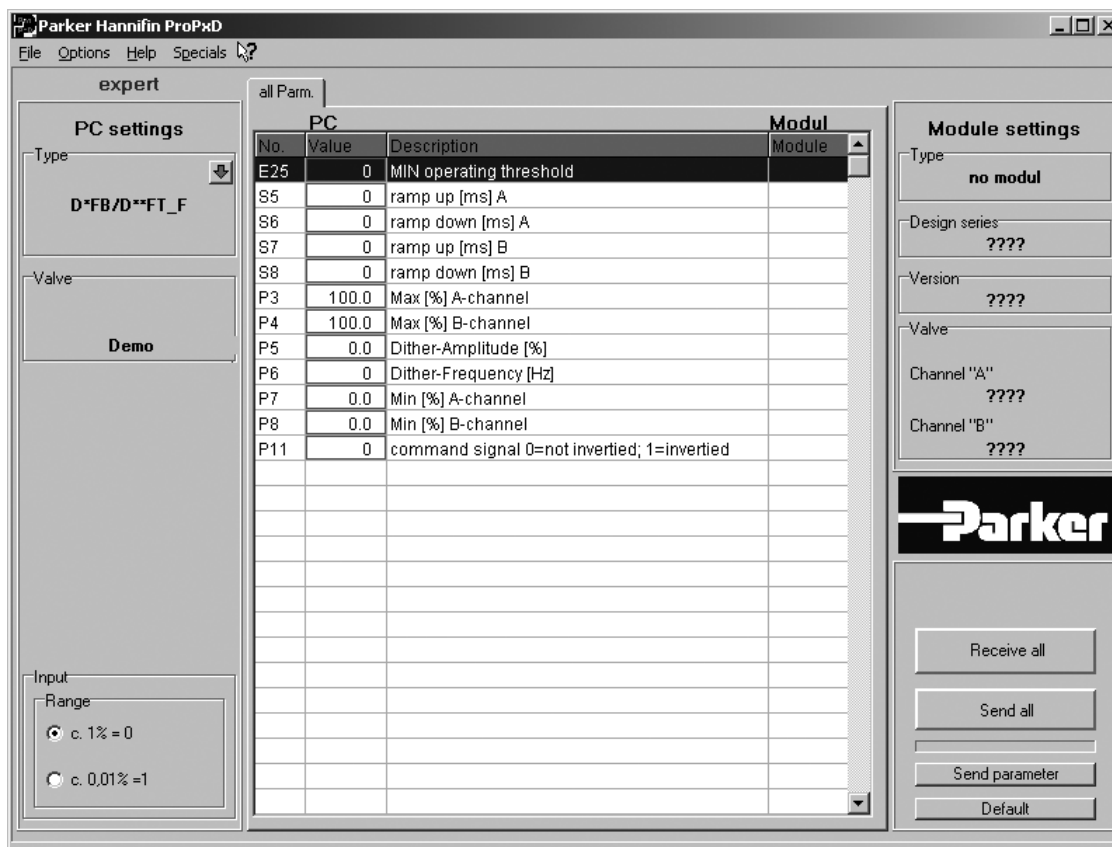

The ProPxD software permits comfortable parameter setting for the module electronics. Via the clearly arranged entry mask the parameters can be noticed and modified. Storage of complete parameter sets is possible as well as printout or record as a text file for further documentation. Stored parameter sets may be loaded anytime and transmitted to other valves. Inside the electronics a nonvolatile memory stores the data with the option for recalling or modification.

The PC software can be downloaded free of charge at www.parker.com/isde – see page “Support” or directly at www.parker.com/propxd.

Features

- Comfortable editing of all parameters
- Depiction and documentation of parameter sets
- Storage and loading of optimized parameter adjustments
- Executable with all actual Windows® operating systems from Windows® XP upwards
- Plain communication between PC and electronics via serial interface RS232C

The parametrizing cable may be ordered under item no. 40982923.

Characteristics

The new direct operated proportional DC valve series D1FC (NG06) with digital onboard electronics and position feedback provides high dynamics combined with high flow.

The D1FC is available with overlap spools for open loop applications as well as zero lap spools for closed loop control.

The LVDT is completely integrated into the housing and it does not require an exposed cable connection. Thus an unintended disconnection is impossible.

The digital onboard electronics is situated in a robust metal housing, which allows the usage under rough environmental conditions. The nominal values are factory set. The parametrizing cable to connect to a serial RS232 interface is available as accessory.

Features

- Progressive flow characteristics for sensitive adjustment
- Low hysteresis
- High dynamics
- High flow capacity
- Compact dimensions
- Defined spool positioning at power-down for zero lap spools

Characteristics

The pilot operated proportional directional valves D*1FC with position feedback are available in 4 sizes:

- D31FC - NG10 (CETOP 05)
- D41FC - NG16 (CETOP 07)
- D91FC - NG25 (CETOP 08)
- D111FC - NG32 (CETOP 10)

The digital onboard electronics is situated in a robust metal housing, which allows the usage under rough environmental conditions.

3

The nominal values are factory set. The parametrizing cable to connect to a serial RS232 interface is available as accessory.

The innovative integrated regenerative function into the A-line (optional) allows energy saving circuits for differential cylinders. The hybrid version can be switched between regenerative mode and standard mode at any time.

Features

- Progressive flow characteristics for sensitive adjustment
- Low hysteresis
- High dynamics
- High flow capacity
- Centre position monitoring optional
- Energy saving A-regeneration optional
- Switchable hybrid version optional

neutral	closed	closed
	open	closed
	closed	open

The neutral position is monitored. The signal changes after less than 10 % of the spool stroke.

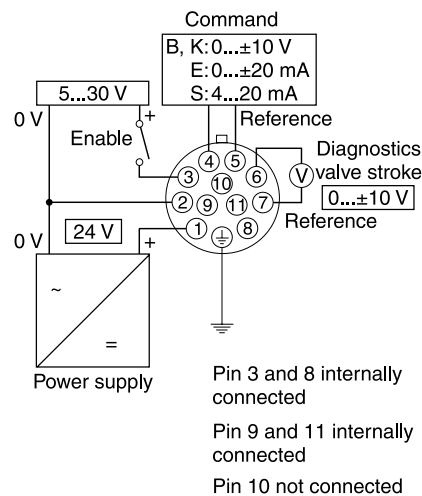

Please order female connector M12x1 separately (see accessories, female connector M12x1 (order no.: 5004109).

Wiring according EN 175201-804

Code 0/3, 6+PE

Code 5, 11+PE

Code 1/7, 6+PE + enable

¹⁾ Only guaranteed with screened cable and female connector

ProPxD interface program

The ProPxD software allows quick and easy setting of the digital valve electronics. Individual parameters as well as complete settings can be viewed, changed and saved via the comfortable user interface. Parameter sets saved in the non-volatile memory can be loaded to other valves of the same type or printed out for documentation purposes.

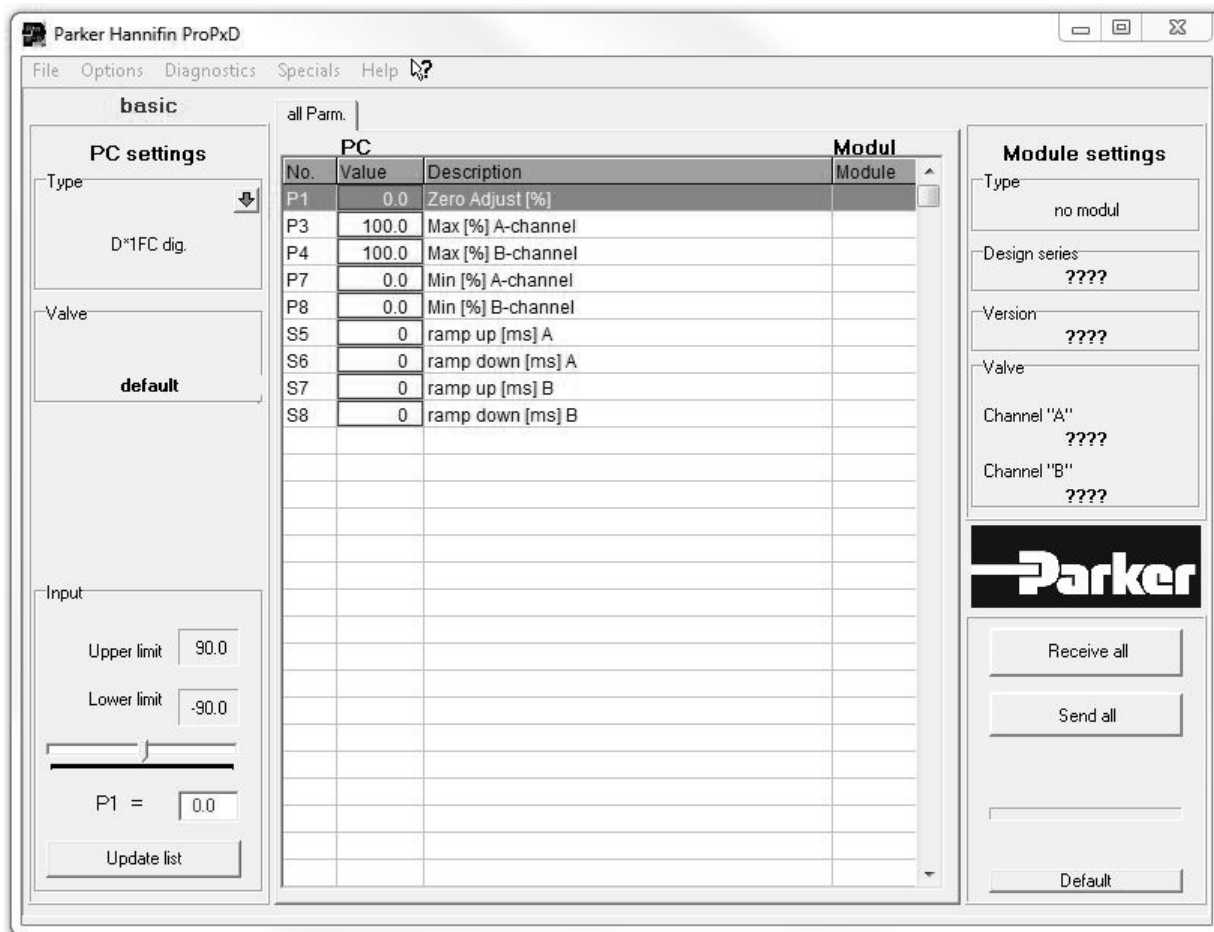

The PC software can be downloaded free of charge at www.parker.com/isde – see page “Support” or directly at www.parker.com/propxd.

Features

- Comfortable editing of valve parameters
- Saving and loading of customized parameter sets
- Executable with all Windows® operating systems from Windows® XP upwards
- Simple communication between PC and valve electronics via serial interface RS232C

The valve electronics cannot be connected to a PC with a standard USB cable – this can result in damages of PC and/or valve electronics.

The parametrizing cable may be ordered under item no. 40982923.

Characteristics

Introduction

The new proportional valves with position feedback series D*FC (direct operated) and D*1FC (pilot operated) with EtherCAT interface fulfill the requirements of modern communication between valve and main control. Due to high data transmission speed and short cycle times, also demanding control functions can be realized within the fieldbus system.

The valve is actuated and monitored by the EtherCAT interface. Actual value (spool position), temperature, operating hours and different error messages are available as diagnostic signals. The valve parameters are factory set and can be adapted with the Parker ProPxD software via the parametrizing interface.

In addition to the fieldbus communication, the valves provide the range of functions of the standard version including analogue command signal and diagnostic spare stroke. Thus they can be operated independent of the fieldbus control, particularly during commissioning and maintenance.

The option with EtherCAT is available for the series:

- D1FC, D3FC
- D31FC, D41FC, D91FC, D111FC

D1FC with EtherCAT

Features EtherCAT interface

- EtherCAT interface, 2x M12x1 connector 4-Pin (EtherCAT In and EtherCAT Out)
- Progressive flow characteristics for sensitive adjustment
- Low hysteresis
- High dynamics
- High flow capacity
- Onboard electronics

Block diagram

3

Dimensions D1FC with EtherCAT

Characteristics

The direct operated control valve D1FP of the nominal size NG06 (CETOP 03) shows extremely high dynamics combined with maximum flow. It is the preferred choice for highest accuracy in positioning of hydraulic axis and controlling of pressure and velocity.

Driven by the patented VCD® actuator the D1FP reaches the frequency response of real servovalves. Compared with solenoid driven valves the D1FP can also be used in applications with pressure drops up to 350 bar across the valve. Because of the high flow capability the D1FP can be a substitute for NG10 valves in some cases.

At power-down the spool moves in a defined position. All common input signals are available.

Features

- Real servovalve dynamics (-3 dB / 350 Hz at ±5 % input signal)
- No flow limit up to 350 bar pressure drop through the valve
- Max. tank pressure 350 bar (with external drain port y)
- High flow
- Defined spool positioning at power-down - optional P-A/B-T or P-B/A-T or center position (for overlapped spools)
- Onboard electronics

ProPxD interface program

The ProPxD software allows quick and easy setting of the digital valve electronics. Individual parameters as well as complete settings can be viewed, changed and saved via the comfortable user interface. Parameter sets saved in the non-volatile memory can be loaded to other valves of the same type or printed out for documentation purposes.

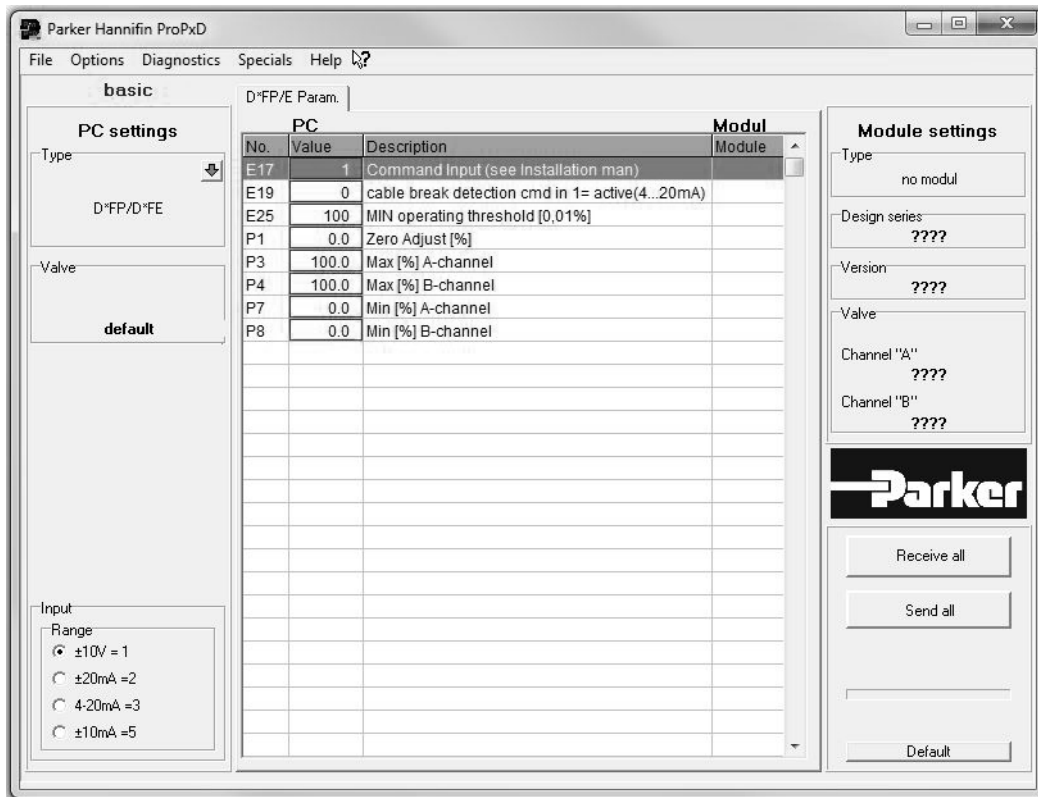

The PC software can be downloaded free of charge at www.parker.com/isde – see page “Support” or directly at www.parker.com/propxd.

Features

- Comfortable editing of valve parameters
- Saving and loading of customized parameter sets
- Executable with all Windows® operating systems from Windows® XP upwards
- Simple communication between PC and valve electronics via serial interface RS232C

The valve electronics cannot be connected to a PC with a standard USB cable – this can result in damages of PC and/or valve electronics.

The parametrizing cable may be ordered under item no. 40982923.

¹⁾ O-ring recess diameter on valve body.

Characteristics

The series of pilot operated control valves D30FP closes the gap between the direct operated D3FP valves and the conventional pilot operated D31FP valves.

Providing high flow capacity and practically no flow limits like D31FP in the envelope size of the D3FP.

The valve works with the hydraulic follower principle, with a moving sleeve as main spool.

3

Features

- Pilot operated with hydraulic follower sleeve
- No flow limit up to 350 bar through the valve
- Defined spool positioning at power-down - optional P-A / B-T or P-B / A-T or center position (for overlapped spools)

	BK385			NBR: SK-D3FP FPM: SK-D3FP-V HFC: SK-D3FP-H

¹⁾ O-ring recess diameter on valve body.

The series of pilot operated servo proportional valves D*1FP transfers the advantages of the Parker patented Voice Coil Drive (VCD®) to larger frame sizes and thus high flow rates. The high dynamics / high precision drive of the pilot valve allows the optimum control of the main spool and results in servo class performance of the complete valves.

The D*1FP series is available in 5 sizes:

D31FP NG10 (CETOP 05)

D41FP NG16 (CETOP 07)

D81FP NG25 (CETOP 08) for port diam. up to 26 mm

D91FP NG25 (CETOP 08) for port diam. up to 32 mm

D111FP NG32 (CETOP 10)

The safety concept works with a safe 4th position at the D1FP pilot valve. This ensures that the main stage is hydraulically balanced at power down and allows to have the main spool spring centered (for overlapped spools) or approximately 10 % spring offset to spool position A or B (for zerolap spools).

The innovative integrated regenerative function into the A-line (optional) allows new energy saving circuits for differential cylinders. The hybrid version can be switched between regenerative mode and standard mode at any time.

Features

- High dynamics
- High flow
- Defined spool positioning at power-down - optional P-A/B-T or P-B/A-T or center position (for overlapped spools)
- Onboard electronics
- Energy saving A-regeneration
- Switchable hybrid version

Characteristics

Introduction

DFplus valves with EtherCAT interface fulfill the requirements of modern communication between valve and main control. Due to high data transmission speed and short cycle times, the high dynamics of the DFplus valves can be also utilized within the fieldbus system.

The valve is actuated and monitored by the EtherCAT interface. Actual value (spool position), temperature, operating hours and different error messages are available as diagnostic signals. The valve parameters are factory set and can be adapted with the Parker ProPxD software via the parametrizing interface.

In addition to the fieldbus communication, the valves provide the range of functions of the standard version including analogue command signal and diagnostic spare stroke. Thus they can be operated independent of the fieldbus control, particularly during commissioning and maintenance.

D1FP with EtherCAT

3

The option with EtherCAT is available for the series:

- D1FP, D3FP
- D30FP
- D31FP, D41FP, D81FP, D91FP, D111FP

as well as for cartridge valves TDP, TEP and TPQ in chapter 8.

Features EtherCAT interface

- EtherCAT interface, 2x M12x1, connector 4-Pin (EtherCAT In and EtherCAT Out)
- High dynamics
- High flow capacity
- Onboard electronics

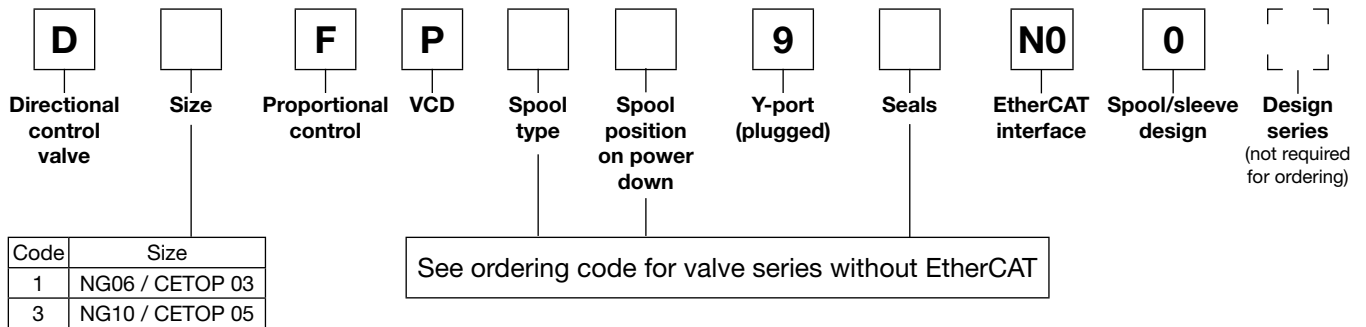

Technical Data

Characteristics / Ordering Code

The pressure relief valve series VS is a direct operated spool valve for subplate mounting. The connection and function is according to ISO 6264.

Function

- Spool type valve
- Subplate mounting according to ISO 6264
- 5 pressure stages
- 2 adjustment modes
- Gauge port

¹⁾ Deviating from ISO the Y port has Ø 14.7 instead of Ø 4.8.

Characteristics

Pilot operated relief valves of the series VBY consist of a pilot with manual adjustment and a spool type main stage. The valves need to be externally drained.

The series VBY NG10 can also be used as pressure sequence valve, because of the high pressure capability in the outlet port and the external drain port. In this case the external drain port Y has to be used.

Features

- Subplate mounting acc. to ISO 5781
- Main stage spool type
- Pilot stage seated type
- 4 pressure stages
- 2 adjustment modes:
 - screw with hexagon socket
 - cylinder lock

¹⁾ Deviating from ISO the Y port has $\varnothing 14.7$ instead of $\varnothing 4.8$.

The direct operated pressure relief valve series EVSA is a seated type valve for screw-in mounting. It is available in two sizes and three pressure stages.

Function

When the pressure in port P exceeds the setting pressure the cone opens to port T and thus limits the pressure in port P to the adjusted level.

The integrated damping spool prevents pressure fluctuations in the transition region. The pressure is set by the adjusting screw, which is locked by the clamping screw. The setting can optionally be secured by a cylinder lock.

Features

- Seated type valve
- Screw-in mounting
- 3 pressure stages
- 2 adjustment modes:
 - screw with hexagon socket
 - cylinder lock

Note

The spring must be unloaded when the EVSA is screwed out of the manifold.

Characteristics

Direct operated pressure relief valves series R1E02 are seated type valves typically used for remote control of pilot operated pressure valves or compensators of variable pumps. In applications where the reliability and simplicity of a hydraulic remote control are preferred to an electrohydraulic system the R1E02 series is an ideal solution.

Features

- Seated type valve
- Body variants:
 - front panel mounting
 - subplate mounting
- 3 pressure stages
- 3 adjustment modes:
 - hand knob
 - acorn nut with lead seal
 - cylinder lock

Characteristics

**Pilot Operated Pressure Relief Valves
Series R4V / R6V**

Pilot operated pressure relief valves series R4V (DIN 24340 Form D) and R6V (DIN 24340 Form E) consist of a manually adjusted pilot stage and a seated type main stage.

A vent function with a solenoid operated directional valve is available for circulation at minimum pressure.

Features

- Pilot operated with manual adjustment
- 2 interfaces
 - R4V subplate ISO 6264 (DIN 24340 Form D) with VV01 vent valve
 - R6V subplate ISO 6264 (DIN 24340 Form E) with CETOP 03 vent valve
- 3 pressure stages
- 3 adjustment modes:
 - hand knob
 - acorn nut with lead seal
 - cylinder lock
- Remote control via port X

Function:

Series R4V/R6V

System pressure in port P is applied via the X gallery to the spring loaded cone in the pilot head. The pilot head controls the pressure in the Z area on top of the main cartridge which is additionally kept close by the main spring. If the pilot pressure exceeds the setting pressure the pilot cone opens and thus limits the pilot pressure.

When the system pressure exceeds the pilot pressure plus the spring force, the main cartridge opens to port T and limits the pressure in port P to the adjusted level.

Series R4V/R6V with vent function

Additionally to the relief function, a solenoid operated vent valve connects the Z area to tank. This allows oil circulation from P to T at minimum pressure drop. The vent valve can either be a standard CETOP 03 valve (R6V) or a sandwich unit (R4V). For both types the vent position can be either at the energized or de-energized solenoid.

Characteristics

Pilot operated pressure relief valves series R4V (TÜV) (DIN 24340 Form D) and R6V (TÜV) (DIN 24340 Form E) include a certification according to directive 2014/68/EU for the usage for safety-related applications.

The valve is set and sealed by the German technical inspection association TÜV. The valve delivery includes the TÜV certificate of conformity.

For series R6V a vent function with a solenoid operated directional valve is available for circulation at minimum pressure.

Features

- TÜV certificate
- Pilot operated with manual adjustment
- 2 interfaces:
 - R4V subplate ISO 6264 (DIN 24340 Form D)
 - R6V subplate ISO 6264 (DIN 24340 Form E) with CETOP 03 vent valve
- Adjustment leaved (code W)
- Adjustment leaved to maximum pressure, lower pressure possible (code V)

R4V06

R6V06 with vent valve

R4V06

Name plate data

Example R4V06

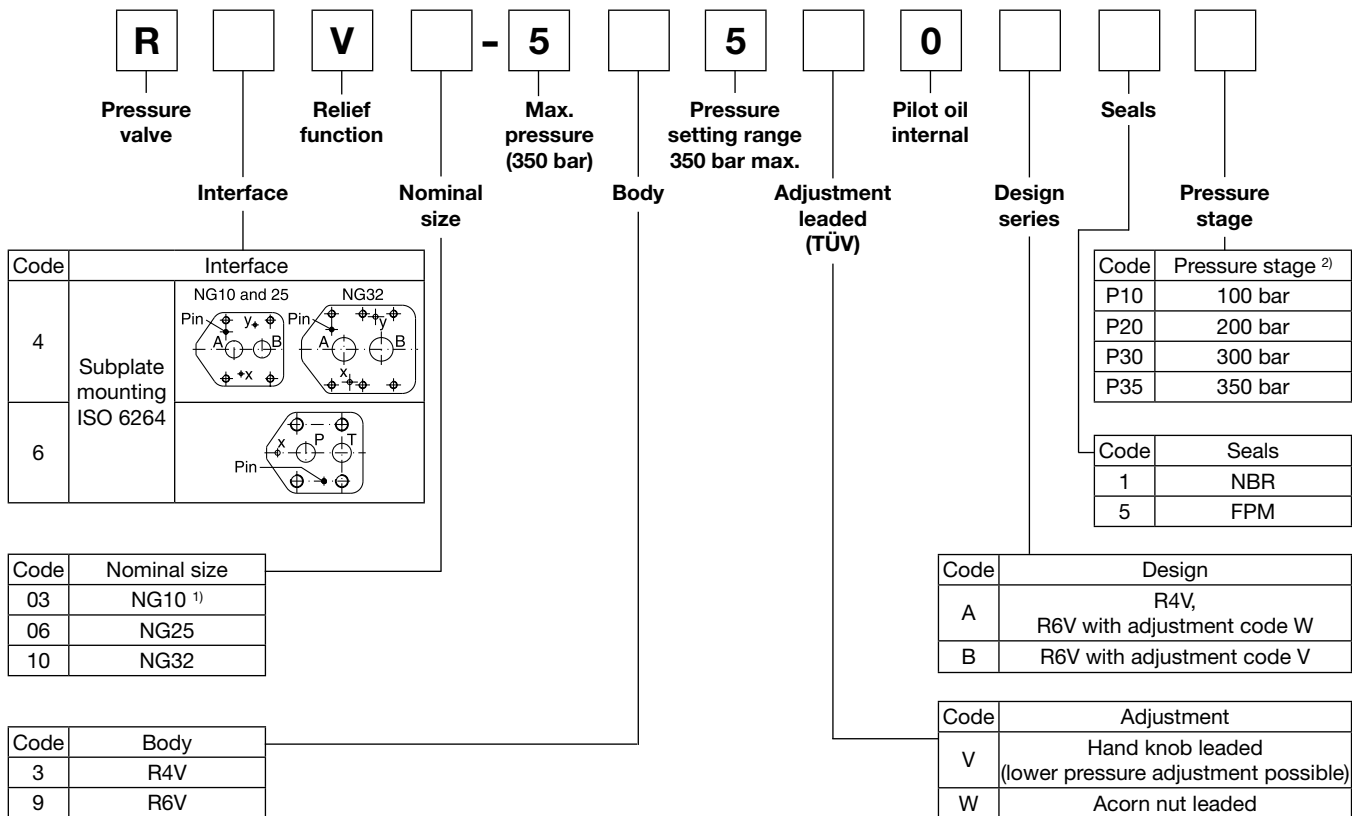

- 415 mm² : minimum opening width
- L220 l/min : max. flow
- 70 bar : set pressure (compare p/Q curves)
- 7,3 mm : cartridge stroke
- 10 % : permitted pressure increase of the flow range

¹⁾ Details see chapter 12, series SPP.

Characteristics / Ordering Code

Pressure relief valves of the series RE06M*W are direct operated proportional valves typically used as remote control valves for flow rates below 3 l/min.

Function

When the pressure in port P or A exceeds the pressure setting at the solenoid, the cone opens to port T and limits the pressure in port P to the adjusted level.

The optimum performance can be achieved in combination with the digital amplifier module PCD00A-400.

Also available as sandwich valve, see Chapter 8, Pilot valves series RPDM.

Features

- Direct operated with proportional solenoid
- Very low pressure adjustment of p_{min}
- 2 pressure ports, A and P
- Subplate mounting according to ISO 6264
- 4 pressure stages

Characteristics / Ordering Code

The proportional pressure relief valve series RE06M*T (NG06) with onboard electronics is based on the functionality of the digital amplifier PCD00. The digital onboard electronics is situated in a robust metal housing and can be used in rough environments. The nominal values of the valves are factory set. Additionally the ProPxD software permits the editing of all parameters. The software is also used for the digital electronic modules. The cable for connection to a serial RS232C interface is available as accessory.

The electrical connection is available in 2 options:

- Code F: 6 + PE central connection
+/- 10 V command signal
+10 V reference voltage output
- Code R: 6 + PE central connection
4...20 mA command signal

Function

When the pressure in port P or A exceeds the pressure setting at the solenoid, the cone opens to port T and limits the inlet pressure to the adjusted level.

The pressure adjustment is effected by applying current to the solenoid. The control signal is modulated to the solenoid current by the electronics.

Features

- Direct operated with proportional solenoid
- Onboard electronics
- Very low pressure adjustment of p_{min}
- Subplate mounting acc. to ISO 6264
- 6 pressure stages
- 2 pressure inlet ports A and P

ProPxD interface program

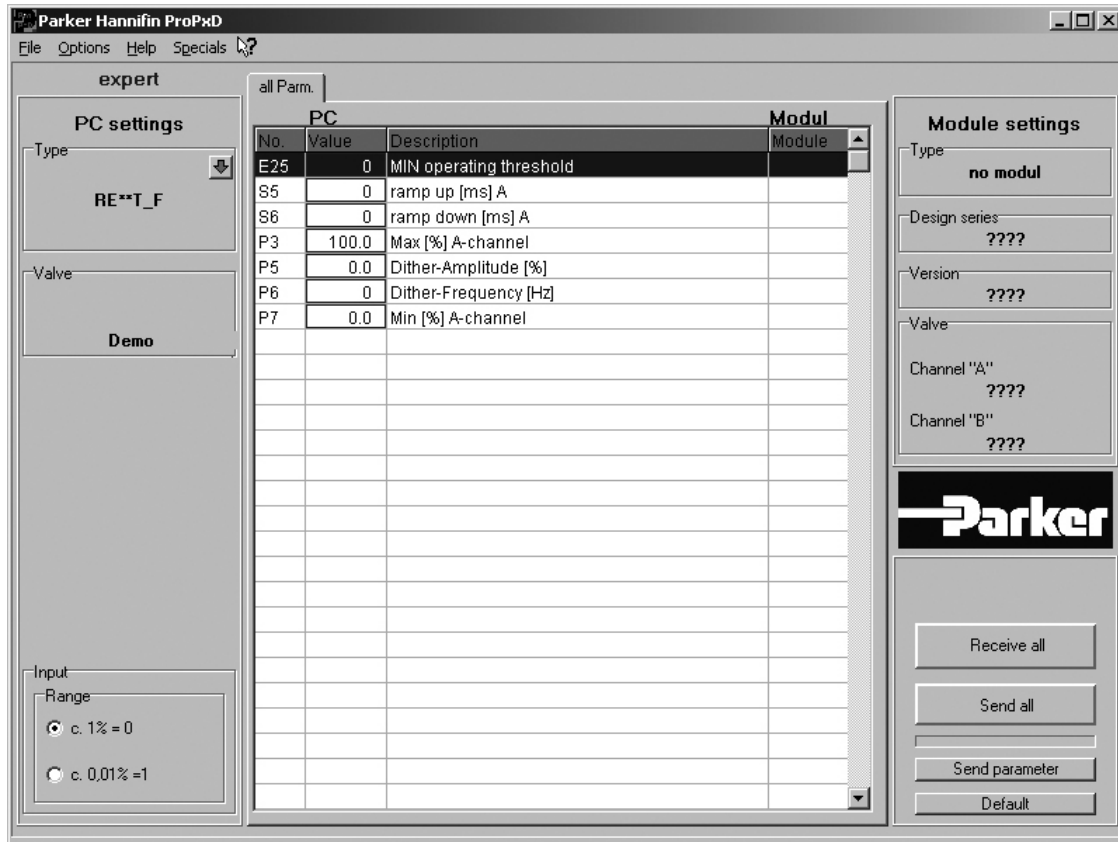

The ProPxD software permits comfortable parameter setting for the module electronics. Via the clearly arranged entry mask the parameters can be noticed and modified. Storage of complete parameter sets is possible as well as printout or record as a text file for further documentation. Stored parameter sets may be loaded anytime and transmitted to other valves. Inside the electronics a nonvolatile memory stores the data with the option for recalling or modification.

The PC software can be downloaded free of charge at www.parker.com/isde – see page “Support“ or directly at www.parker.com/propxd.

Features

- Comfortable editing of all parameters
- Depiction and documentation of parameter sets
- Storage and loading of optimized parameter adjustments
- Executable with all actual Windows® operating systems from Windows® XP upwards
- Plain communication between PC and electronics via serial interface RS232C

The parametrizing cable may be ordered under item no. 40982923.

Characteristics

Pilot operated proportional pressure relief valves series R4V (DIN 24340 Form D) and R6V (DIN 24340 Form E) consist of a proportionally adjusted pilot stage and a seated type main stage.

The optimum performance can be achieved in combination with the digital amplifier module PCD00A-400.

Features

- Pilot operated with proportional solenoid
- 2 interfaces:
 - R4V subplate ISO 6264 (DIN 24340 Form D)
 - R6V subplate ISO 6264 (DIN 24340 Form E)
- 3 pressure stages
- Mechanical maximum pressure adjustment (optional for R6V)

¹⁾ Details see chapter 12, series SPP.

Characteristics

The proportional solenoid operated pilot stage with integrated electronics controls a seated type main stage. The valves are optionally available with a mechanical maximum pressure adjustment.

The onboard electronics of the proportional pressure relief valves is based on the functionality of the digital amplifier PCD00.

The digital onboard electronics is situated in a robust metal housing and can be used in rough environments.

The nominal values of the valves are factory set. Additionally the ProPxD software permits the editing of all parameters. The software is also used for the digital electronic modules. The cable for connection to a serial RS232C interface is available as accessory.

The electrical connection is available in 2 options:

- Code 10V: 6 + PE central connection
 0...+10 V command signal
 +10 V reference voltage output
- Code 4MA: 6 + PE central connection
 4...20 mA command signal

Features

- Pilot operated with proportional solenoid
- Onboard electronics factory set
- Ramp time adjustment
- Linearized characteristics
- 3 pressure stages
- 2 interfaces:
 - R4V subplate ISO 6264 (DIN 24340 Form D)
 - R6V subplate ISO 6264 (DIN 24340 Form E)
- Optional mechanical maximum pressure adjustment

ProPxD interface program

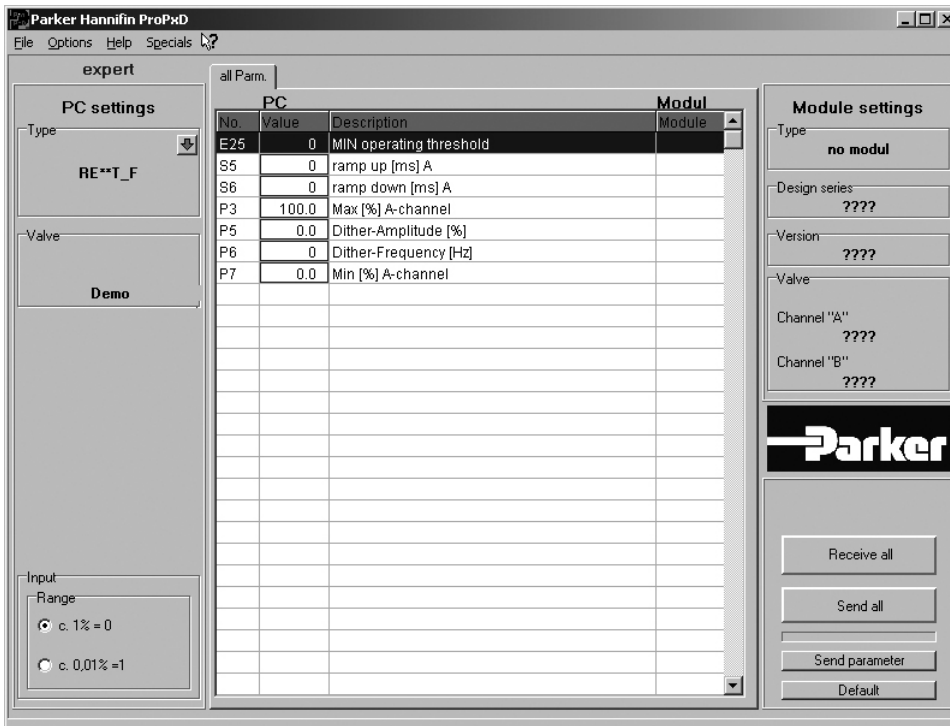

The ProPxD software permits comfortable parameter setting for the module electronics. Via the clearly arranged entry mask the parameters can be noticed and modified. Storage of complete parameter sets is possible as well as printout or record as a text file for further documentation. Stored parameter sets may be loaded anytime and transmitted to other valves. Inside the electronics a nonvolatile memory stores the data with the option for recalling or modification.

The PC software can be downloaded free of charge at www.parker.com/isde – see page “Support“ or directly at www.parker.com/propxd.

Features

- Comfortable editing of all parameters
- Depiction and documentation of parameter sets
- Storage and loading of optimized parameter adjustments
- Executable with all actual Windows® operating systems from Windows® XP upwards
- Plain communication between PC and electronics via serial interface RS232C

The parametrizing cable may be ordered under item no. 40982923.

¹⁾ Details see chapter 12, series SPP.

Pilot operated relief valve with proportional adjustment. Series VBY*K is a pilot operated pressure valve with external drain. Because of the high pressure capability of the outlet port the VBY*K NG10 can be used as sequence valve. In this case the external drain port Y has to be used.

The optimum performance can be achieved in combination with the digital amplifier module PCD00A-400.

Features

- Proportional adjustment
- Subplate mounting acc. to ISO 5781
- External drain
- Main stage spool type valve
- Pilot stage seated type valve

Characteristics

**Unloading Valve
Series R4U**

Subplate mounted unloading valves series R4U are used to unload a circuit at low pressure. The mechanically adjustable pressure signal to unload the main stage has to be applied to port X. The pressure differential between opening and closing is nominal 15 or 28 % of the setting pressure:

28 % for pressure stages 105 and 210 bar

15 % for pressure stage 350 bar

Typical applications are unloading of pumps in an accumulator circuit or unloading of the low pressure stage of a double pump.

The R4U is available with an electrical vent valve for unpressurized circulation.

Features

- Pilot operated unloading valve
- Interface
 - subplate mounting to ISO 5781
- 3 pressure stages
- 2 vent valve functions
- 3 adjustment modes:
 - hand knob
 - acorn nut with lead seal
 - cylinder lock

Subplate mounted sequence valves series R4S enable a hydraulic system to operate in a pressure sequence. When the system pressure reaches the setting pressure the valve opens and permits flow to the secondary sub-system.

Features

- Pilot operated sequence valve
- Subplate mounting acc. to ISO 5781
- 3 pressure stages
- 3 adjustment modes:
 - hand knob
 - acorn nut with lead seal
 - cylinder lock

Characteristics

Direct operated pressure reducing valve with manual adjustment. Series VM is a direct operated, spring loaded 3-way pressure reducing valve, that is open in neutral position. The valve closes the connection when the pre-set pressure is exceeded.

Primary port: NG06 - P, NG10 - B

Secondary port: NG06 - A, NG10 - A

Tank port: NG06 - T, NG10 - Y

If the pressure increases due to an external influence the spool opens to port T until the pre-set pressure is reached.

Characteristics

Pilot Operated Proportional Reducing Valve Series VMY

Proportional pressure reducing valves of the series VMY allow the variable adjustment of the reduced pressure from 0 bar up to the nominal pressure.

The valve consists of a spool type main stage and a proportionally operated pilot stage. The desired pressure can be variably set corresponding to the command signal specified on the amplifier. The proportional solenoid converts the current of the amplifier into force on the valve poppet of the pilot stage.

Typical applications are pressure systems, test equipment, or counterweight systems. The optimum performance can be achieved in combination with the digital amplifier module PCD00A-400 for open loop systems or with PWDXXA-40* for closed loop systems.

Function VMY*K06

With the proportional solenoids de-energized the main spring forces the main spool into the neutral position. Port A is connected to port T. Thus the reduced pressure only depends on the back pressure in the external drain pipe and/or the tank pressure and can accordingly be reduced down to 0 bar. The pressure present in the P line delivers the pilot oil to the pilot stage via a flow control valve.

When the proportional solenoid is energized, the pilot pressure is increased in the pilot pressure area, and the main spool moves against the spring until the connection P - A opens. The regulation of the reduced pressure on connection A takes place by the constant comparison of the actual pressure and the reference pressure of the pilot stage.

VMY*K06

VMY*K06

VMY*K10

4

VMY*K10

The valve spool is designed so that the connection B-A is open in the neutral position and is closed in the working position.

¹⁾ Deviating from ISO the Y port has Ø 14.7 instead of Ø 4.8.

Subplate mounted proportional pressure reducing valves series R4R have a proportional solenoid operated pilot stage and a cartridge main stage.

The optimum performance can be achieved in combination with the digital amplifier module PCD00A-400.

Features

- Pilot operated with proportional solenoid
- Continuous adjustment by proportional solenoid
- Subplate mounting according to ISO 5781
- 3 pressure stages
- With mechanical maximum pressure adjustment

Characteristics / Ordering Code

Manatrol needle valve with steel body as screw-in valve for block insertion, optionally with a 30° taper fine V-notch or micro-fine rectangular slot. The form of the metering opening influences the accuracy of the flow adjustment, which is pressure and viscosity dependent. The needle is made of stainless steel and fits into a ring gap in the valve cartridge. For details of cutting tools for reaming the block bore, see 'Accessories' at the end of this chapter.

Characteristics / Ordering Code

Manatrol shut-off and metering valves with 2 stage needle cone. Fine adjustment for the first stage can be achieved with 3 rotations of the adjustment knob. The second stage with normal throttle characteristics is achieved with 3 further rotations.

A cylindrical needle with a rectangular slot is provided to reduce the viscosity effect for sizes 400 and 600. The flow is dependent on pressure and viscosity.

Characteristics / Ordering Code

Manatrol throttle check valves series FS allow the adjustment of the flow for a defined direction.

A 2 stage needle allows for very exact setting of smaller flow rates with the first 3 rotations of the adjustment knob. After 3 more rotations, the valve is completely open. The valve setting can be locked by a locking screw.

Characteristics

2-way flow control valves series GFG2 are used to provide pressure compensated flow. The valve design compensates temperature variations to a certain extent. The GFG is optionally equipped with a built-in check valve for the return flow.

Design

The 2-way flow control valves are used with a triangular flow restrictor and a subsequent pressure compensator. The setting of the flow rate can be locked by a cylinder lock in the adjusting knob against unauthorized adjustment (option S).

Function

The fluid enters through port A through the flow restrictor. Downstream of the flow restrictor the pressure compensator is located. The control edges are provided by four radial bores in the poppet, which are fully open to port B in the neutral position.

Optionally the flow from A to B can be blocked by external pilot pressure applied to port P (option X). This can be used to avoid unintended initial movements of actuators.

The flow adjustment is done via the hand knob with an adjusting angle knob of 270°.

Features

- Flow rate independent of pressure and temperature
- Available for 7 different flow rates
- Good fine adjustment
- External port (P) to block flow from A to B
- Optional reverse flow check valve
- Turn knob with cylinder lock (option S)

Note

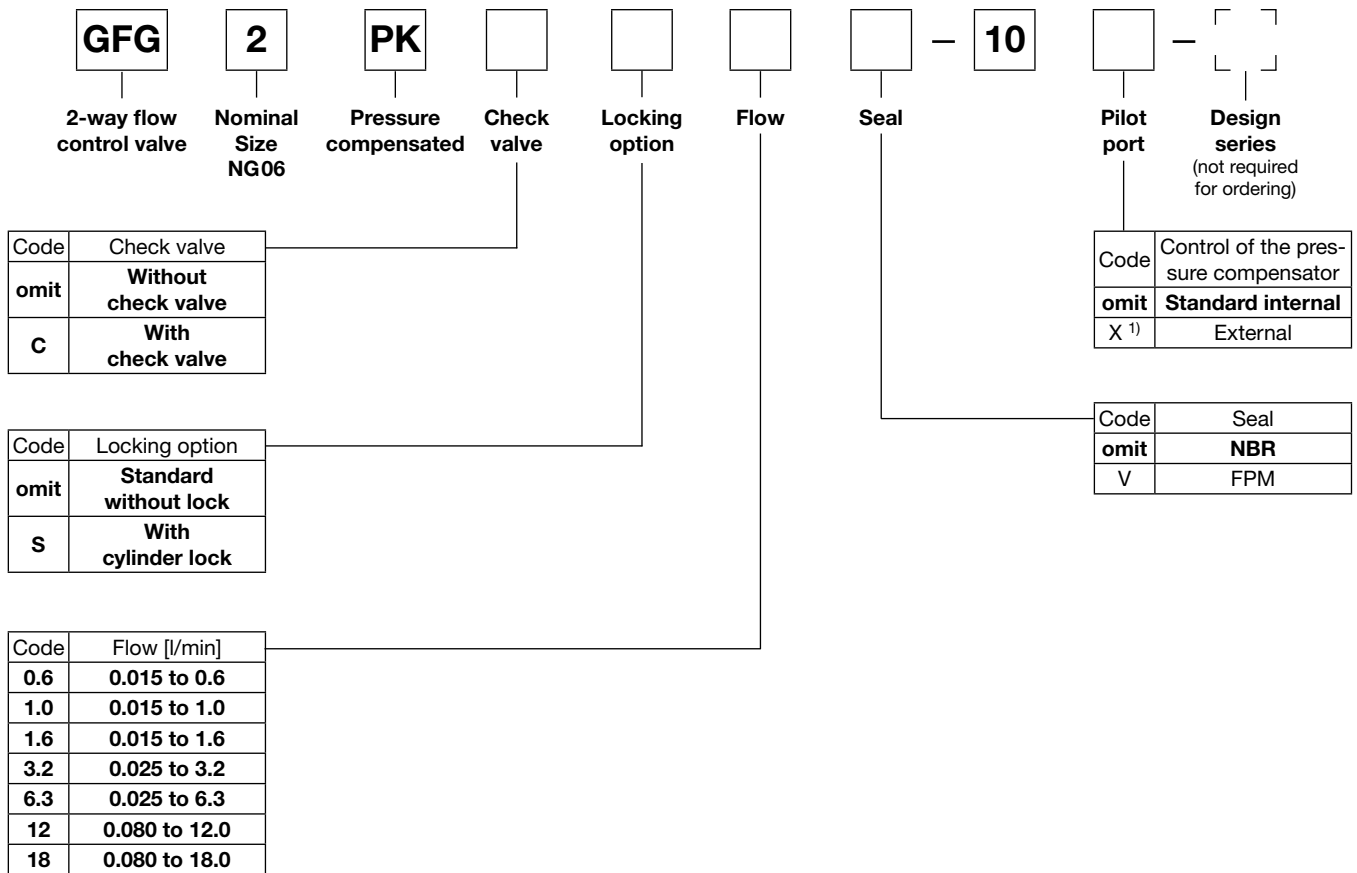

Rectifier plate and subplates see 'Accessories' at the end of this chapter.

Characteristics / Ordering Code

2-way flow control valves series 2F1C provide pressure and viscosity compensated flow from port A to port B. The counter direction is blocked (standard) or can be open via an integral reverse flow check valve (optional).

Function

The compensator spool is located in front of the metering spool. The metering spool is closed in the neutral position to avoid undesired initial actuator motion. The oil flow to open the metering spool has to pass a needle valve (not shown in the sectional drawing). The needle valve can be adjusted from the front panel to set the response time of the 2F1C.

The metering spool is adjusted by the main control knob. The key lock has three positions:

- Lock: Adjustment is locked.
- Adjust: Full adjustment is permitted.
- Trim: Fine adjustment of $\pm 5\%$ is possible.

Features

- 2-way flow control valve
- Subplate mounting according to ISO 6263
- Excellent fine adjustment
- Adjustable response time
- Closed in neutral position
- Optional reverse flow check valve
- 2 sizes, NG10 (3/8"), NG16 (3/4")

Characteristics / Ordering Code

Proportional flow control valves of the series DUR*L06 are used to generate pressure-compensated flow from A to B. The valve is equipped with a built-in check valve for the return flow.

For meter-in and meter-out control of an actuator a rectifier plate can be used.

Function

When solenoid current is applied, the metering spool opens against the reset spring and the flow is regulated by the pressure compensating spool to port B.

With the aid of the pressure compensating spool, the pressure drop is held constant on the metering window. Thus pressure load changes are compensated, and the oil flow remains constant.

In combination with the digital electronic module PCD00A-400 the valve parameters can be saved changed and duplicated.

5

Features

- Low hysteresis
- High reproducibility
- Load-independent oil flow
- Bypass check valve
- Mounting pattern to ISO 6263
- 3 flow rates

Note

Characteristics / Ordering Code

The check valves series RK and RB are designed to go into simple, threaded cavities. The connection is O-ring sealed on the 118° shoulder in the mounting cavity.

The valve body is supplied as a unit, with a spring loaded, hardened and polished semisphere of stainless bearing steel inside. The seat is also hardened and ground.

Mounting cavity

- for connecting in combination with tube fitting
- for internal line channels

* Required depth depending on type of screw plug, connecting plate etc. used.

1) Thread runout x must be maintained. It may be smaller, but not larger (requirement for a perfect seal using the O-ring).

2) Fully cut-out thread

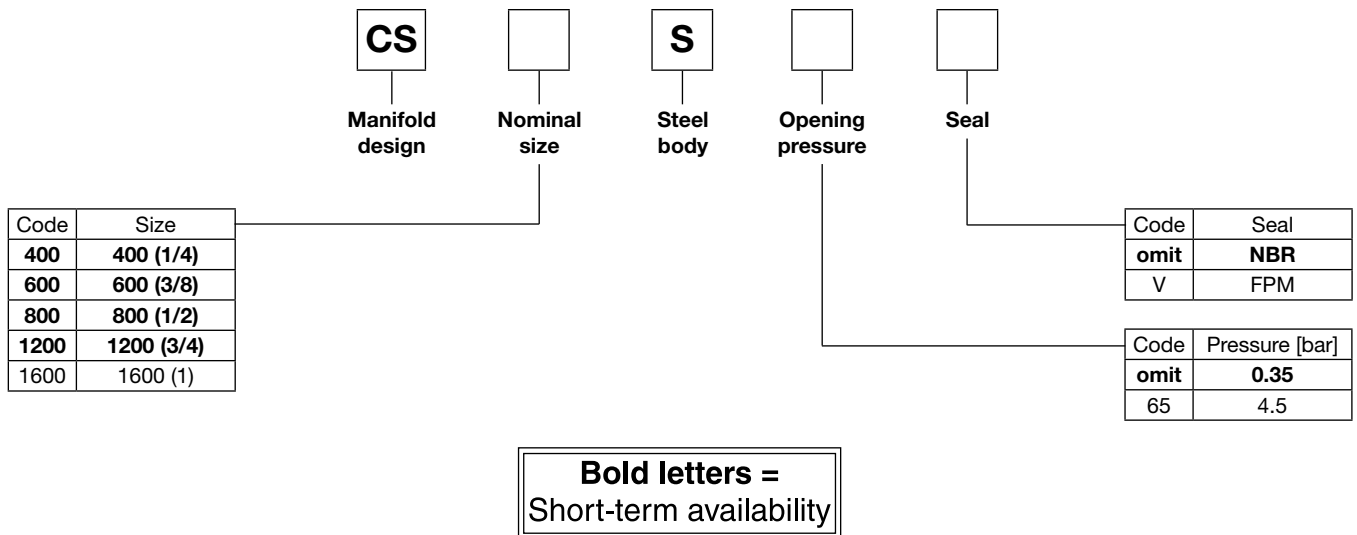

Characteristics / Ordering Code

Manatrol check valves of the series CS for subplate mounting provide free flow in one direction and block flow in the counter direction.

Specific Manatrol poppets and poppet guides ensure reliable functional integrity even at high flow rates and/or pulsations.

Characteristics / Ordering Code

The check valves series SPZBE are slip-in cartridge valves. The function unit is fixed inside the manifold by a hexagonal plug with slot.

The design is based on CE series with same poppet and sleeve. The different mounting cavity has to be considered.

Features

- Little space required
- Leak-free from port B to A
- 4 different opening pressures

Characteristics / Ordering Code

The check valve series SPV and SPZ are designed as threaded cartridge valves. All parts are assembled in one unit and easy to mount.

Features

- Little space required
- Leak-free
- Easy assembly

Direct operated check valves C4V allow free flow from A to B. The counter direction is blocked. The C4V series is equipped with a leak-free seat type cartridge.

Function

The pressure arising in port A lifts the poppet from the valve seat and releases the flow to B. In the counter direction, the spring and the pressure on top of the cartridge hold the poppet onto the seat and block the flow.

Characteristics / Ordering Code

Hydraulically pilot operated check valves C4V allow free flow from A to B. The counter-flow direction is blocked. When pressure is applied to control port X, the ring chamber flow from B to A is released.

Up to four different pilot control ratios are available (see ordering code).

Function

When no pressure is applied to the X-port, the flow from B to A is blocked, because the pressure in B is also in effect on top of the poppet.

Pressurizing the X port relieves the area on top of the poppet to the drain port and allows flow from B to A.

The seat design of the SVL valve series provides leak-free separation of port A and B in the closed position.

Characteristics

Seat valves series D4S are designed for directional control functions. A large variety of poppets, springs and covers – including shuttle valves, stroke limiters, solenoid valves (VV01) and position control – allow to design individual hydraulic solutions for nominal flow up to 600 l/min.

A complete program of 2/2-way seat valves is offered under Parker brand:

- subplate mounted valves series D4S chapter 6
- SAE flange valves series D5S chapter 9
- slip-in cartridges series CAR on request

Features

- Subplate mounting according to ISO 5781
- Leak-free seat valve design
- Numerous pilot options
- 6 poppet types
- D4S03 - NG10
- D4S06 - NG25
- D4S10 - NG32

Characteristics

Direct operated, spool-type sandwich DC valves series Z1DW size NG06 are used for shutting off the flow in stack systems.

For shut off secondary ports A and B, body version A is applied. P and T are drilled through.

For applications with port B drained in a switching position to tank, body version B is used. P and A are drilled through.

Valves are sealed to the manifold side.

The valves can be ordered with inductive position control optionally.

Attention:

The adjustment of the position control is factory set and sealed. Replacement and repairs can only be undertaken by the manufacturer.

Technical Features

- Shut-off sandwich valve NG06
- Inductive position control optional

- 3 0V
- 4 Out A: normally closed

Outputs: Open collector

Definitions

Start position monitored:

The valve is de-energized. The inductive switch gives a signal at the moment when the spool leaves the spring offset position (below 25 % spool stroke). At the switching point the spool is located within the closed position. It is secured that only the flow paths of the offset position are granted.

End position monitored:

The inductive switch gives a signal before the end position is reached (above 75 % spool stroke).

The switch can only be located on the opposite side of the solenoid for direct operated valves. Please order plug M12 x 1 separately (see accessories, plug M12x1; order no.: 5004109).

¹⁾ Only guaranteed with screened cable and female connector

The flow curve diagram shows the flow versus pressure drop curves for all spool types. The relevant curve

number for each spool type, operating position and flow direction is given in the table below.

Spool	Symbol	A-A'	A'-A	B-B'	B'-B	T-T'	T-T' Start position	T-T' End position	P-P'	B-T	A-B	B-A

The direct operated pressure relief valves series RDM are in sandwich design for easy configuration of stock systems. They relieve the pressure of the hydraulic system to the adjusted value.

Function

PT... pressure is relieved from P to T.

TT... pressure pre-loading in T.

Features

- The direct operated, cushioned piston design results in fast response, low leakage and minimal hysteresis.
- Pressure settings:
bar 25, 64, 160, 210, 350 for RDM2,
bar 19, 50, 100, 150, 210 for RDM3.
- Adjustment modes:
- Hexagon socket
- Cylinder lock
- Turning knob
- Gauge port
- RDM2 - NG06 (CETOP 03)
RDM3 - NG10 (CETOP 05)

The pilot operated pressure relief valves from the Parker Manapak series RM are in sandwich design for easy configuration of stack systems. Depending on type, pressure limiting can be achieved in ports P, A or B with unloading to port T.

RM valves may only be mounted in the defined mounting position.

Features

- The valve bodies of the Parker Manapak valve series RM are made of steel.
- The pressure can be set by hexagon socket screw (RM4), hexagon socket screw or knob with cylinder lock (RM6). Piloting results in a flat p/Q performance curve.
- Piloting results in a flat p/Q performance curve.
- The orifices located in the main spool limit the pilot oil flow.

Characteristics

Series PRDM are direct operated pressure reducing valves to regulate pressure in one area of a hydraulic circuit at a predetermined level below normal system pressure. Additionally, an integral pressure relieving function for the secondary reduced pressure circuit is incorporated into the design.

Function

These valves are "normally open" devices that allow fluid to flow through the controlled port during their non-actuated or "at rest" condition. When downstream pressure exceeds the value set by the spring force, the control piston moves off its seat, closing off the flow path and thus reducing the fluid passing through from the main system. The cushioned piston modulates to maintain the preset pressure in this branch of the hydraulic circuit. If, due to external forces, the pressure continues to rise in this branch circuit, the piston will keep moving against the spring force allowing fluid to be drained to the tank, thereby limiting maximum pressure to the valve's setting.

Features

- 3-way design for pressure relieving of the secondary side
- The direct operated, cushioned piston design results in fast response, low leakage and minimal hysteresis.
- Reduced pressure in the 'P', 'A' or 'B' port.
- Pressure settings:
25, 64, 160, 210, 350 bar for PRDM2,
19, 50, 100, 150, 210 bar for PRDM3.

The pilot operated pressure reducing valves series PRM are in sandwich design for easy configuration of stack systems. The reducing function is located in port P.

The pressure reduction for the desired connecting port is achieved by internal connections of the pilot and drain lines with the corresponding channels.

Features

- The valve bodies of the Parker Manapak valve series PRM are made of steel.
- The control pressure range can be set by hexagon socket screw (PRM4), knob, or knob with cylinder lock (PRM6).
- Pressure gauge/measuring connections are available in the valve body.
- Piloting results in a flat p/Q performance curve.
- PRM4 - NG16 (CETOP 07)
- PRM6 - NG25 (CETOP 08)

Pilot operated pressure reducing valves series ZDR are designed for maximum flow rates.

The reducing function can be located in the ports P, A or B. The sizes NG06 and NG10 are equipped with an integral return flow check valve (reducing function in A or B).

Features

- High flow capacity
- Pressure function in P, A or B
- With integral return flow check valve
- Sizes:
ZDR01 - NG06 (CETOP 03)
ZDR02 - NG10 (CETOP 05)

Characteristics / Ordering Code

Proportional pressure reducing valves series PRPM keep a constant pressure p_{red} on the secondary side – independent of pressure fluctuations on the primary side. The integrated pressure relief function obviates the need for an additional pressure relief valve on the secondary side and reliefs to tank, if the reduced pressure rises above the setting pressure.

The proportional pressure reducing valve reduces the pressure in output port p_{red} in proportion to the solenoid current. The PRPM works practically independent of the inlet pressure. In non-activated mode, the connection to the tank is fully open with a min. pressure corresponding to the spring force.

The gauge port is connected to the secondary side. Types A and B have an integrated bypass check valve. The PRPM provides optimum performance in combination with a digital amplifier module PCD00A-400.

2-way pressure compensators in sandwich design maintain a constant pressure differential between ports P and A or P and B. Thus achieves a constant flow rate by a steady cross sectional opening of a directional control valve. The control pressure applied to the spring side of the compensator spool is supplied from port A or B via a shuttle valve. Flow rate regulation is automatically effective in the port with the highest pressure.

Application example

Proportional DC valve model D31FB with 2 way pressure compensator LCM3 maintains a constant flow rate. The diagram shows the design according to code X.

Characteristics

Double-throttle check valves from the Parker Manapak series FM are in sandwich design for easy configuration of stack systems. Throttle and check valves are located in ports A and B.

FM2 and FM3 can be used as meter-in or meter-out throttle by changing the mounting position.

FM4 can be selected by ordering code as meter-in or meter-out throttle. FM6 is only available as meter-out control.

The throttle check valve can also be used to influence the switching time of pilot operated directional valves. In this case, the valve is positioned between the pilot stage (CETOP 03, NG06) and the main stage (CETOP 05, NG10 up to CETOP 10, NG32).

Features

- Two types of metering needle design can be selected when ordering FM2 and FM3 valves to achieve the throttle characteristics required to suit the application.
- Large bypass check valves allow high flow at low pressure drop.
- NG06 - FM2 (CETOP 03)
NG10 - FM3 (CETOP 05)

Pilot operated check valves from the Parker Manapak series CPOM are in sandwich design for easy configuration of stack systems. Depending on the function required, one or two pilot operated check valves are arranged in the ports A and/or B. The free flow direction is always from the valve side to the manifold side.

Function

The check valves open when flowing to the consumer side, where the opposing check valve is hydraulically-mechanically pilot operated simultaneously by a control spool, and thus the return flow is enabled from other consumer sides.

Features

- The valve bodies of the Parker Manapak valve series CPOM are made of steel.
- The valve poppet is precisely guided into the steel sleeve and ensures a good seal on the seat.
- When the valve poppet is open, the large cross-section allows high flow rates at low differential pressure.
- Different control ratios can be chosen with the NG06 and NG10 valves.
- Pre-opening for CPOM*HT to achieve smooth opening.

Characteristics / Ordering Code

Pilot operated check valves series ZRE are designed for maximum flow rates and long life time.

The valves are typically used in combination with spool type directional control valves to ensure nearly leak free positioning of the actuator.

The inlet flow is free while the outlet flow is blocked. Pressure in the inlet line opens the check valve and allows free outlet flow.

Features

- High flow capacity
- High life time
- Check function in A, B or A + B
- ZRE01 - NG06 (CETOP 03)
- ZRE02 - NG10 (CETOP 05)

7

The counterbalance valve series ZNS controls the actuator movement at overrunning loads.

The return flow from the actuator is piloted and controlled by the inlet flow to the actuator, ensuring a cavitation-free lowering of the load.

The counter balance valve operates as a pressure relief valve. The setting pressure is lowered by the pressure in the inlet line. To ensure safe load holding the setting pressure should be approximately 30 % higher than the max. load pressure.

ZNS-AB01

ZNS-B01

ZNS-B01

Features

- Controlled movement loads
- Load holding via leak-free poppet valve
- Secondary relief protection for the actuator
- ZNS*01 – NG06 (CETOP 03)
ZNS*02 – NG10 (CETOP 05)

 All other dimensions: ± 0.2 mm.

Mounting

Parker sandwich valves can be installed as desired. Each has a mounting pattern, whose dimensions correspond to the following standards.

- ISO 4401
- DIN 24430
- CETOP RP121
- NFPA

Mounting screws

Cylinder head bolts as per ISO 4762-12.9, or studs as per DIN 835 10.9 with cylindrical nuts are used to mount the height stacking Manapak sandwich valves.

Bolt kits and tie rods see chapter 12, "Accessories".

Length of the mounting screws

The screw length is the sum of the engagement depth plus the stacking length. The stud length is the sum of the stacking length plus the thread depth of the nut.

Torques

The mounting screws or studs must be tightened with the prescribed tightening torque so that safety and proper seal are ensured.

See chapter 12 "Accessories" for BK bolt kits and TK tie rod kits.

Characteristics

2-way slip-in cartridge valves are hydraulically controlled seat valves that are designed for compact block installation. Slip-in cartridge, cover, and pilot system are valve elements that permit single and combined functions.

Series CE offers poppet and sleeve combinations for directional functions. Series CP offers a cartridge for pressure functions and has to be combined with corresponding covers.

Features

- Installation cavity and mounting pattern according to ISO 7368
- 5 poppet shapes
- 5 poppet springs
- Optional seal between ports B and C
- Cover with adjustable stroke limitation
- Cover with mounting pattern for pilot valve assembly
- Combinations for complex functions
- Normally open cartridge (CE*F*)

DK-M8-12 ⇒ 20 pcs, orifice size 1.2 mm

Orifice gauge: Order no. DK-05-30

Removal CE016 to CE063

The extracting tools consist of tee bar, slide hammer, support handle, and expanding collet (fig. 1).

At first the spacer ring is removed. Next, spring and poppet are withdrawn. Finally, the expanding collet is inserted into the sleeve and braced by means of the tee bar. Using the slide hammer, collet and sleeve are extracted from the cavity.

Figure 1

CE016 to CE063 *	090 4600 09785

Removal CE080 to CE100

The extracting tools consist of spacer ring puller (fig. 4), puller (fig. 3), and puller thrust plate. At first the spacer ring is removed. Next the puller is inserted into the sleeve and aligned by the puller thrust plate. Tightening the nut then extracts the sleeve from the cavity.

Spare parts.INDD 15.07.21

Characteristics

The pressure relief valve series R consists of a manual adjustment pilot stage and a cartridge main stage.

The pressure relief valve series RS consists of a manual adjusted pilot stage with a directional valve for an electrically controlled vent function and a cartridge main part.

The R/RS*E model codes embrace the pilot valves, covers and cartridges that are also offered as separate items. See combination examples for details.

Features

- Pilot operated with manual adjustment
- Cavity and mounting pattern according to ISO 7368
- 6 pressure stages
- 2 switching types (series RS*E)
- 3 adjustment modes
 - Hand knob
 - Acorn nut with lead seal
 - Cylinder lock
- 6 sizes, NG16 to NG63

Note

Port X only usable for remote control.

Characteristics

The pilot operated pressure relief valves series DSDU limit the system pressure by opening the pressure port to tank. They are mostly used for accumulator pressure relief. The valve is set and sealed by the German technical monitoring association TÜV. The valve delivery includes a copy of the TÜV certificate of conformity.

Features

- TÜV certificate
- CE certification (module G) according to directive 2014/68/EU
- Installation cavity and mounting pattern according to ISO 7368
- 3 sizes, NG16 to NG32
- Remote control via port X

Characteristics

The proportional pressure relief valve series RE*E*W consists of a proportional pilot stage and a slip-in cart-ridge main stage. A mechanical maximum pressure stage is optionally available. For sizes NG25, NG32 and NG40 a screw-in cartridge is used, for sizes NG50 and NG63 an additional sandwich unit.

The RE*W model code embraces the pilot valves, covers and cartridges that are also offered as separate items. See combination examples for details.

In combination with the digital power amplifier PC-D00A-400 the valve parameters can be saved, changed and duplicated.

Features

- Pilot operated with proportional solenoid
- Continuous adjustment by proportional solenoid
- Optional mechanical max. pressure stage
- Cavity and mounting pattern according to ISO 7368
- 4 pressure stages
- 6 sizes, NG16 to NG63

Note

Port X only usable for remote control.

¹⁾ Width 65 mm.

²⁾ With mechanical pressure adjustment.

The proportional pressure relief valves series RE*E*T with onboard electronics and a slip-in cartridge main stage is electronically based on the functionality of the digital amplifier PCD00.

The digital onboard electronics is situated in a robust metal housing and can be used in rough environments. The nominal values of the valves are factory set. Additionally the ProPxD software permits the editing of all parameters. The software is also used for the digital electronic modules. The cable for connection to a serial RS232C interface is available as accessory.

The valves are optionally available with a mechanical maximum pressure adjustment.

The RE*E*T model code embraces the pilot valves, covers and cartridges that are also offered as separate items.

Features

- Pilot operated pressure relief valve
- Onboard electronics
- Optional mechanical max. pressure stage
- Factory setting
- Ramp time adjustment
- Linearized characteristics
- 4 pressure stages
- Cavity and mounting pattern according to ISO 7368
- 6 sizes, NG16 to NG63

Note

Port X only usable for remote control.

ProPxD interface program

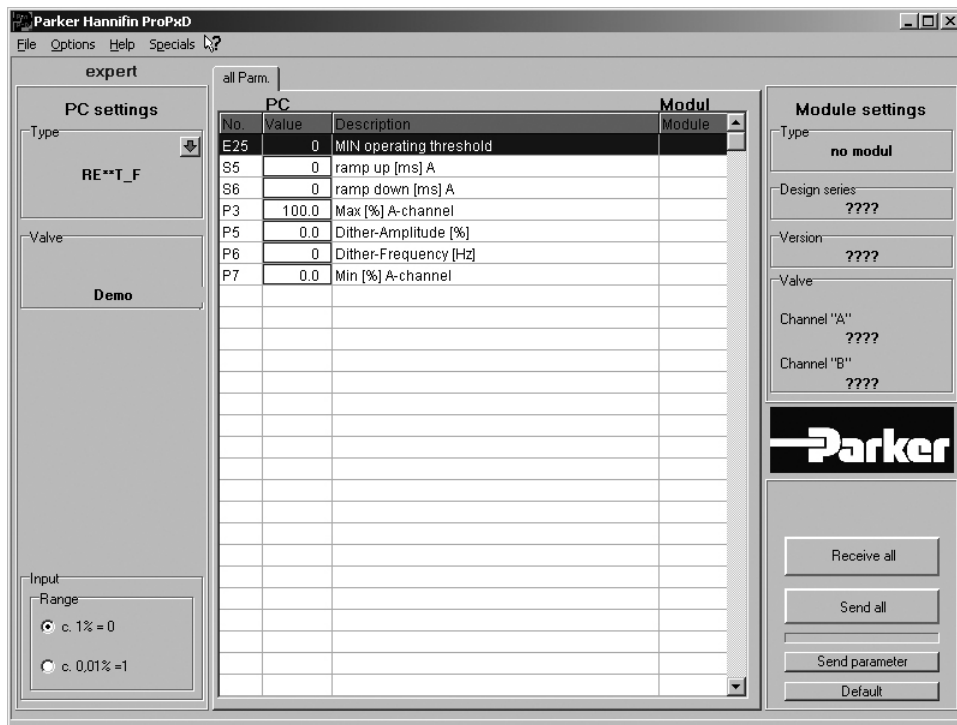

The ProPxD software permits comfortable parameter setting for the module electronics. Via the clearly arranged entry mask the parameters can be noticed and modified. Storage of complete parameter sets is possible as well as printout or record as a text file for further documentation. Stored parameter sets may be loaded anytime and transmitted to other valves. Inside the electronics a nonvolatile memory stores the data with the option for recalling or modification.

The PC software can be downloaded free of charge at www.parker.com/isde – see page “Support“ or directly at www.parker.com/propxd.

Features

- Comfortable editing of all parameters
- Depiction and documentation of parameter sets
- Storage and loading of optimized parameter adjustments
- Executable with all actual Windows® operating systems from Windows® XP upwards
- Plain communication between PC and electronics via serial interface RS232C

The parametrizing cable may be ordered under item no. 40982923.

Characteristics

Unloading valves series UR*E consist of a mechanical pilot stage and a slip-in cartridge main stage. These valves are used to unload a circuit at low pressure. The mechanically adjustable pressure signal to unload the main stage has to be applied to port X. The nominal pressure differential between opening and closing is 15 %. In addition the series US*E is vented by electrical operation. The UR*E/US*E model codes embrace the pilot valves, covers and cartridges that are also offered as separate items. See combination examples for details.

Features

- Pilot operated unloading valve
- Cavity and mounting pattern according to ISO 7368
- 4 pressure stages
- 2 switching types (series US*E)
- 3 adjustment modes
 - Hand knob
 - Acorn nut with lead seal
 - Cylinder lock
- 6 sizes NG16 to NG63

Note

Port X only usable for remote vent function

Unloading Valves Series UR*E / US*E

Ordering Code

UR*E

US*E

¹⁾ To be used in combination with rectifier plugs at 120 VAC / 230 VAC power supply.

UR*E

General							
Nominal size		NG16	NG25	NG32	NG40	NG50	NG63
Interface	Slip-in mounting acc. ISO 7368						
Mounting position	as desired, horizontal mounting preferred						
Ambient temperature	[°C]	-20...+60					
MTTF _D value	[years]	75					
Weight	[kg]	2.2	3.5	4.9	8.0	13.7	22.8
Hydraulic							
Max. operating pressure	[bar]	Ports A and X up to 350, Ports B and Y 30					
Pressure stages	[bar]	75, 175, 250, 350					
Pressure differential, nominal	[%]	15					
Nominal flow	[l/min]	220	500	950	1400	2300	4000
Fluid	Hydraulic oil according to DIN 51524						
Fluid temperature	[°C]	-20...+70 (NBR: -25...+70)					
Viscosity, permitted	[cSt] / [mm ² /s]	20...400					
Viscosity, recommended	[cSt] / [mm ² /s]	30...80					
Filtration	ISO 4406 (1999); 18/16/13						

US*E

General							
Nominal size		NG16	NG25	NG32	NG40	NG50	NG63
Interface	Slip-in mounting acc. ISO 7368						
Mounting position	as desired, horizontal mounting preferred						
Ambient temperature	[°C]	-20...+60					
MTTF _D value	[years]	75					
Weight	[kg]	2.7	5.2	6.4	9.5	15.2	24.3
Hydraulic							
Max. operating pressure	[bar]	Ports A and X 350, ports B and Y 30					
Pressure stages	[bar]	75, 175, 250, 350					
Pressure differential, nominal	[%]	15					
Nominal flow	[l/min]	220	500	950	1400	2300	4000

Viscosity, recommended	[cSt] / [mm ² /s]	30...80					
Filtration	ISO 4406 (1999); 18/16/13						
Electrical (solenoid)							
Duty ratio	100 % ED; CAUTION: coil temperature up to 150 °C possible						
Protection class	IP65 in accordance with EN 60529 (with correctly mounted plug-in connector)						
	Code	K		J		U	
Supply voltage	[V]	12 V =		24 V =		98 V =	
Tolerance supply voltage	[%]	±10		±10		±10	
Current consumption	[A]	2.72		1.29		0.33	
Power consumption	[W]	±10		±10		±10	
Solenoid connection	Connector as per EN175301-803, solenoid identification as per ISO 9461						
Wiring min.	[mm ²]	3 x 1.5 recommended					
Wiring length max.	[m]	50 recommended					

p/Q performance curve ¹⁾

All characteristic curves measured with HLP46 at 50 °C.

¹⁾ The performance curves are measured with external drain.
For internal drain the tank pressure has to be added to curve.

Characteristics / Ordering Code

Check valves of the series C1DB consist of a slip-in valve, that is designed for a compact manifold block installation.

Features

- Cavity and mounting pattern according to ISO 7368
- 4 different springs
- 8 sizes NG16 to NG100

100	BK420	8x M30x140	1775	SK-CBE1000	SK-CBE1000V	1/8 NPT

Characteristics

Hydraulically pilot operated check valves allow free flow from A to B. The counter-flow direction is blocked.

When pressure is applied to control port X, the ring chamber flow from B to A is released. The pilot control ratio is 6:1.

Function

When no pressure is applied to the X-port, the flow from B to A is blocked, because the pressure in B is also effective on top of the poppet.

Pressurizing the X-port relieves the area on top of the poppet to the drain port and allows flow from B to A. The seat design of the SVLB valve series provides leak-free separation of port A and B in the closed position.

Features

- Pilot operated check valve
- Cavity and mounting pattern acc. to ISO 7368
- Dampening poppet optional
- 5 sizes NG16 to NG50

The 2/2-way seat valves series C10C*E are equipped with an inductive switch to monitor the closed position. The poppet has a 60/40 area ratio (AA = 0.6 AC, AB = 0.4 AC) and is capable for flow in both directions.

The safety overlap of the poppet avoids opening of the valve before the signal of the inductive switch has changed.

For sizes NG80 and NG100 a proximity switch is used.

Features

- 8 sizes, NG16 up to NG100
- Cover to mount a directional control valve (on the side) for cover 3 (for NG16 to NG63)
- Cavity and mounting pattern acc. to ISO 7368
- Monitored closed position
- Inductive switch CE conform
- Optional with poppet sealing between pilot flow C and port B

- 2 Out A: not connected
- 3 0V
- 4 Out A: normally closed

8

Please order plug M12x1 separately. Straight plug recommended – no defined position possible for angled plug.

Definition

Start position monitored:

The switching point of the inductive switch is within the overlap of the poppet.

After the signal of the inductive switch has changed, the poppet leaves the safety overlapping position.

The series of active pilot operated 2/2-way cartridge valves TDW enables to open and close the main poppet solely by pilot pressure, independent of pressure build-up in the main ports A and B.

The main poppet is designed hollow and mostly pressure balanced. The operation is accomplished via minimal control surfaces resulting in low pilot oil demand and fast switching operations.

TDW is supplied as one unit to ensure easy installation – sleeve and body are screwed together. Additionally, the lower recess in the standardized mounting cavity is no longer required, providing the possibility to minimize pressure losses in the manifold block.

Features

- Active pilot operated 2/2-way cartridge valves
- Cavity and mounting pattern according to ISO 7368
- Flow direction B to A and A to B
- 7 sizes NG25 up to NG100
- Position monitoring optional
- Stroke limiter optional

TDW040

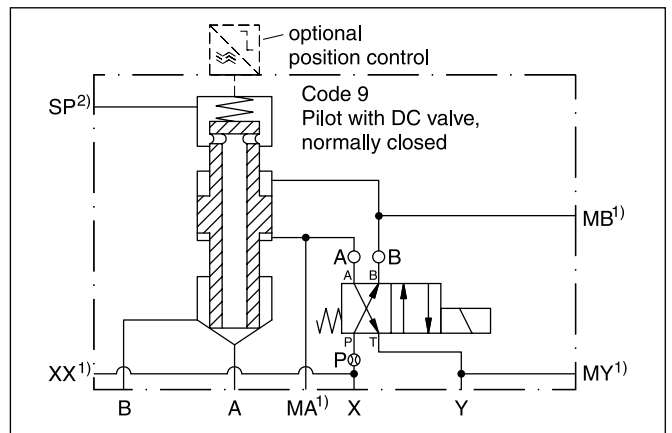

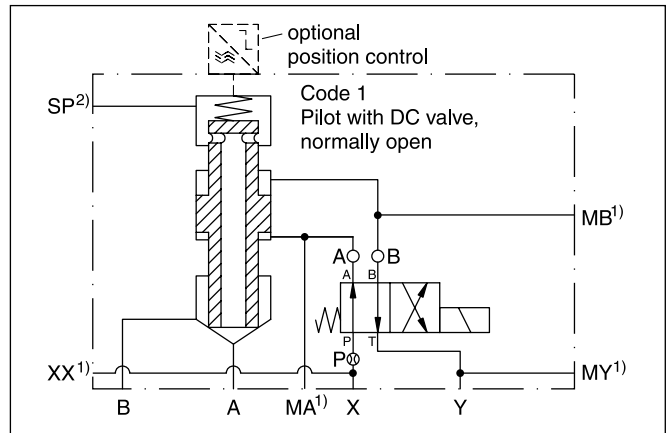

1) NG25 and NG32 without accu port XX and without ports MA, MB and MY.
2) NG25 without suction port SP.

Characteristics / Ordering Code

The 2-way proportional throttle valves series TDA are used to control large oil flows.

Features

- Cavity and mounting pattern according to ISO 7368
- Fail-safe function at power failure
- Leak-free from port B to A
- Pressure differential up to 350 bar possible
- 8 sizes NG16 up to NG100

Function

The 2-way proportional throttle valves have a 3-stage design consisting of the first solenoid operated pilot stage with a spool in sleeve design, the second pilot stage with the control spring and the sequence spool and as main stage the poppet in the sleeve. The proportional solenoid operates the pilot spool against the feedback of the control spring and controls the position of the sequence spool. The main poppet follows the position of the sequence spool and provides an open area for flow from B to A (optional A to B) in proportion to the solenoid current. The poppet is positioned independently of the differential pressure, which can become as high as the maximum working pressure.

In combination with the digital power amplifier PC-D00A-400 the valve parameters can be saved, changed and duplicated.

Characteristics

Accumulator discharge valves series TEA are preferably used in hydraulic systems where high flow rates are discharged from hydraulic accumulators over a short operating period (in the range of milliseconds). Typical applications are injection molding and die casting machines as well as hydraulic presses.

Basically the function of an accumulator discharge valve corresponds to the function of a TDA throttle valve. In addition a directional valve is integrated in the pilot circuit to meet the relevant safety regulations.

The directional valve provides the safety function. When the solenoid is deenergized and the spring is in end position, pilot pressure from X presses the control piston into lower end position and the main poppet is closed. As a result the flow from B to A or from the reservoir system to the machine is blocked.

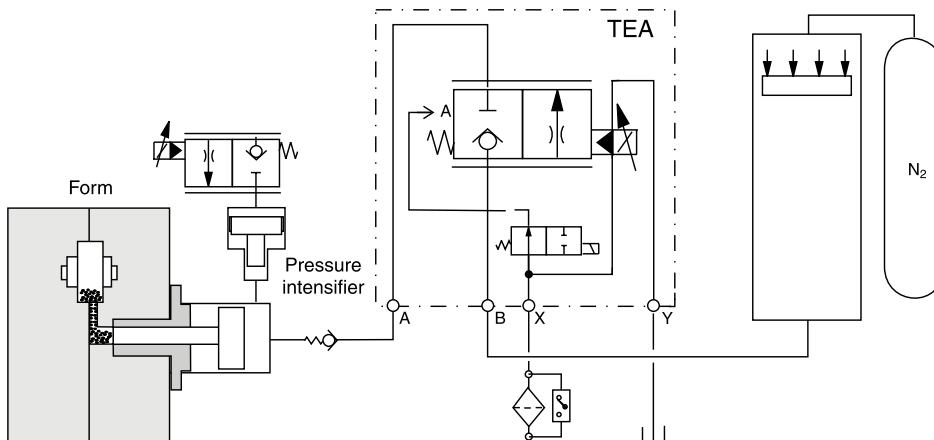

Characteristic curve

Characteristic curve measured with HLP46 at 50 °C.

Example accumulator system in a die casting machine

The 2-way high performance proportional throttle valves series TDC are used in applications where high flow has to be precisely controlled at high dynamics. Typical applications are die casting, injection moulding and hydraulic presses.

Function

The 2-way high performance proportional throttle valves TDC have a 2-stage design consisting of a proportional pilot valve and a main stage with poppet and LVDT.

With the pilot valve the TDC achieves fast response times: from 20 ms (NG25) up to 31 ms (NG50) with an accuracy of <0.7 % of the nominal flow. The pilot valve actively controls the poppet - independent of the pressure conditions in the main ports.

It is basically required that the pilot pressure is at the level of the system pressure. At low system pressure the pilot pressure should be min. 140 bar, when high valve dynamics are desired.

TDC040

Features

- Active pilot operated 2-way high performance proportional throttle valve
- Cavity and mounting pattern according to ISO 7368
- Fast step response
- Flow direction B to A and A to B
- Completely mounted and adapted unit with integrated electronics
- In order to ensure the closed position, pilot pressure is required.
- 4 sizes NG25 up to NG50

TDC040

¹⁾ NG25 and NG32 without accu port XX and without ports MA, MB and MY.

²⁾ NG25 without suction port SP.

Installation Recommendations / Electronics

Installation recommendation (NG40 + NG50)

An insufficient pilot oil supply (e.g. due to long distances and/or small diameters) can negatively influence the dynamics of the TDC valve.

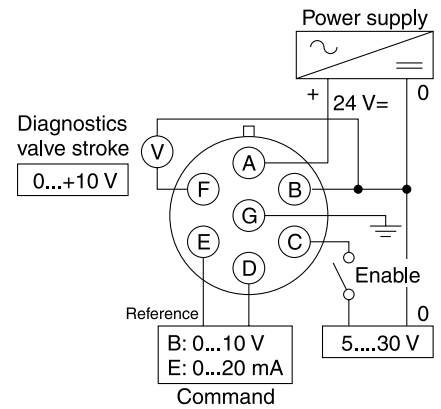

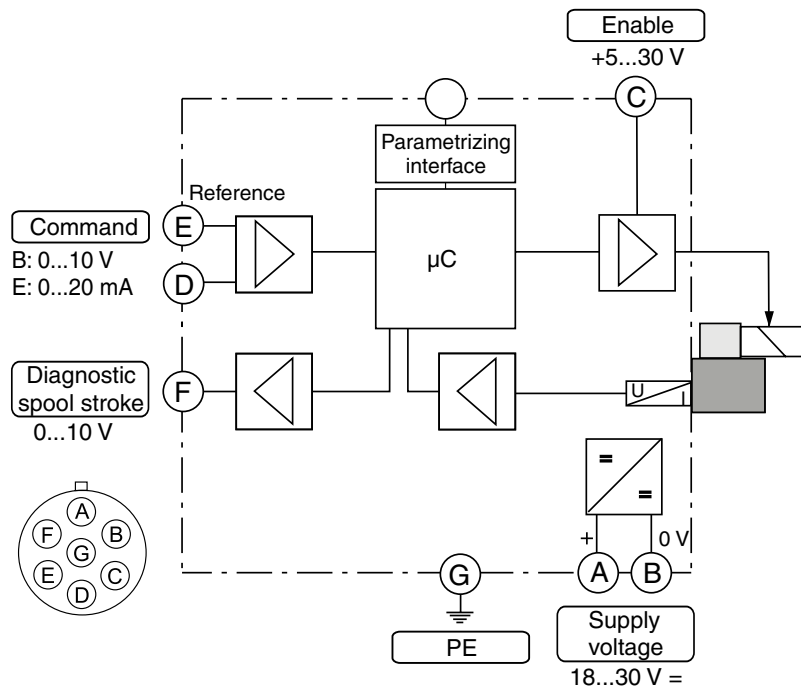

To avoid this, an accumulator can be connected to port XX at the valve body of the TDC. A short-term undersupply with pilot oil can be compensated via this accumulator.

Sizing data: see operation manual.

Please also consider the Parker accumulator product range and the Parker Accumulator Sizing Software.

ProPxD interface program

The ProPxD software allows quick and easy setting of the digital valve electronics. Individual parameters as well as complete settings can be viewed, changed and saved via the comfortable user interface. Parameter sets saved in the non-volatile memory can be loaded to other valves of the same type or printed out for documentation purposes.

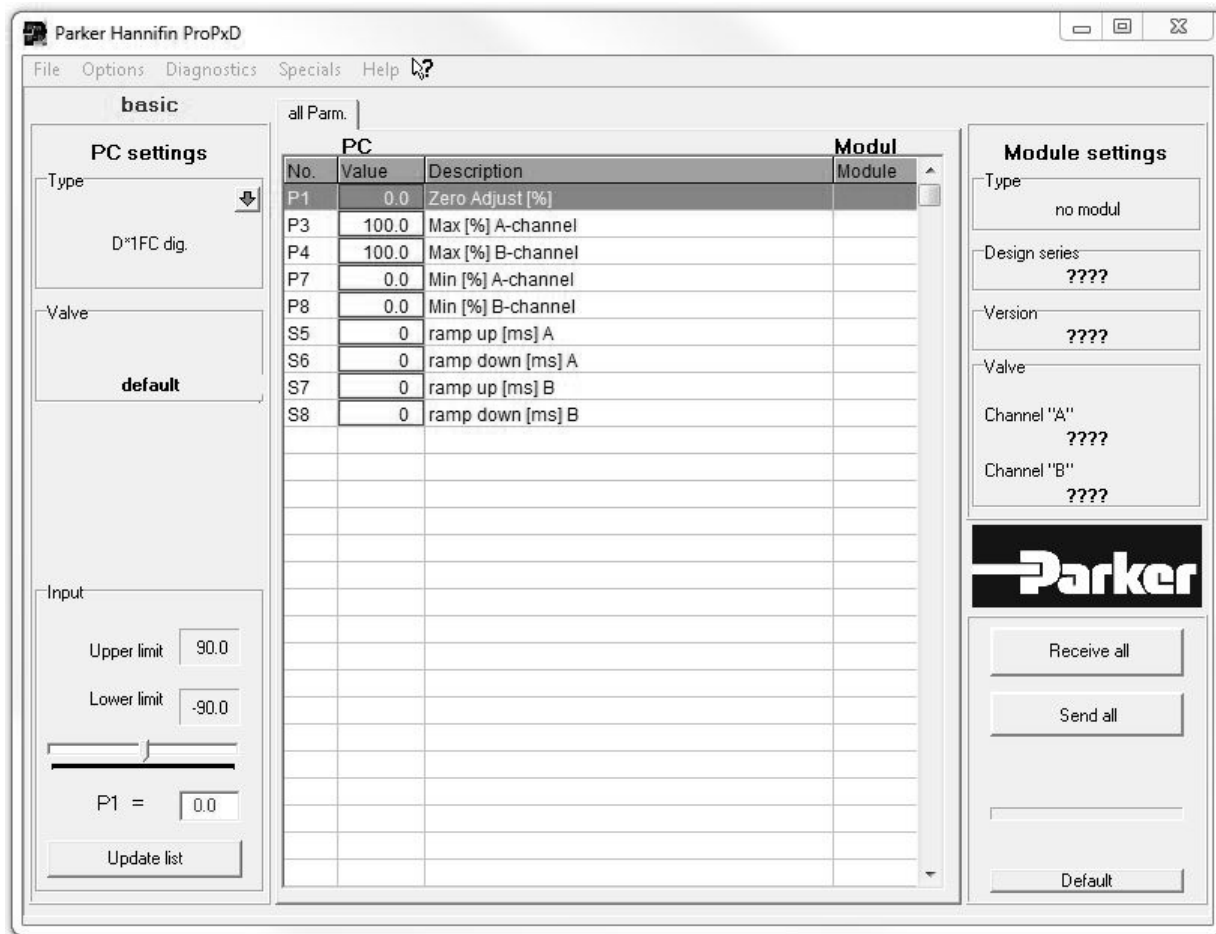

The PC software can be downloaded free of charge at www.parker.com/isde – see page “Support” or directly at www.parker.com/propxd.

Features

- Comfortable editing of valve parameters
- Saving and loading of customized parameter sets
- Executable with all Windows® operating systems from Windows® XP upwards
- Simple communication between PC and valve electronics via serial interface RS232C

The valve electronics cannot be connected to a PC with a standard USB cable – this can result in damages of PC and/or valve electronics.

The parametrizing cable may be ordered under item no. 40982923.

Characteristics

The 2-way servo proportional valves with VCD® technology valves series TDP are used in applications where high flow has to be precisely controlled at maximum dynamics. Typical applications are die casting, injection moulding and hydraulic presses.

Function

The 2-way servo proportional valves TDP have a 2-stage design consisting of a DFplus pilot valve and a main stage with poppet and LVDT.

With the DFplus pilot valve the TDP achieves extremely fast response times: from 10.5 ms (NG25) up to 28 ms (NG100) with an accuracy of <0.1 % of the nominal flow. The pilot valve actively controls the poppet - independent of the pressure conditions in the main ports. It is basically required that the pilot pressure is at the level of the system pressure. At low system pressure the pilot pressure should be min. 140 bar, when high valve dynamics are desired.

The integrated electronics in the pilot of the TDP has two control loops for the main poppet and the pilot spool.

Characteristics

2-way servo proportional valves with VCD® technology and shut-off valve series TEP base on the TDP range. Additionally, TEP valves are equipped with a direction control valve for shutting off the pilot system.

Structure and function

The 2-way servo proportional valves with shut-off valve TEP have a 2-stage design consisting of a DFplus pilot valve and a main stage with poppet and LVDT.

With the DFplus pilot valve the TEP achieves extremely fast response times: from 10.5 ms (NG25) up to 28 ms (NG100) with an accuracy of <0.1 % of the nominal flow. The pilot valve actively controls the poppet - independent of the pressure conditions in the main ports. It is basically required that the pilot pressure is at the level of the system pressure. At low system pressure the pilot pressure should be min. 140 bar, when high valve dynamics are desired.

The integrated electronics in the pilot of the TEP has two control loops for the main poppet and the pilot spool.

In the de-energized position of the shut-off valve, the upper pilot control surface of the main spool is pressurized, the lower one is relieved to tank. Independent of the DFplus pilot valve, the main spool remains always closed, if the shut-off valve is not activated.

If the solenoid of the shut-off valve is energized, the position of the main spool is controlled by DFplus pilot valve and LVDT.

The shut-off valve can be ordered with position control optionally.

TEP040

Features

- Active pilot operated 2-way servo proportional valves with shut-off valve
- Flow directions A-B and B-A
- Cavity and mounting pattern according to ISO 7368
- Fast step responses
- Completely mounted and adapted unit with integrated electronics
- In order to ensure the closed position pilot pressure is required
- 7 sizes, NG25 up to NG100
- Shut-off function

1) If valves with onboard electronics are used in safety-related parts of control systems, in case the safety function is requested, the valve electronics voltage supply is to be switched off by a suitable switching element with sufficient reliability.

Installation Recommendations / Electronics Series TEP

Installation recommendations

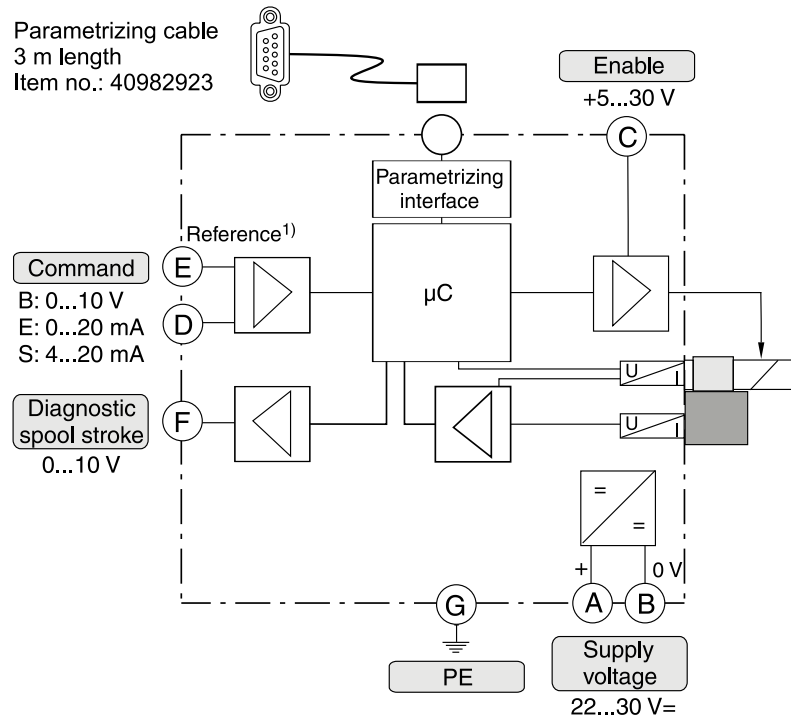

An insufficient pilot oil supply (e.g. due to long distances and/or small diameters) can negatively influence the dynamics of the TEP valve.

To avoid this, an accumulator can be connected to port XX at the valve body of the TEP. A short-term undersupply with pilot oil can be compensated via this accumulator.

Sizing data: see operation manual.

Please also consider the Parker accumulator product range and the Parker Accumulator Sizing Software.

Characteristics

The new 2-way servo proportional valves with VCD® technology series TFP provide outstanding flow values and a minimized pressure drop. They are used in applications where high flow has to be precisely controlled at maximum dynamics. Typical applications are die casting, injection moulding and hydraulic presses.

Design and function

The 2-way servo proportional valves TFP have a 2-stage design consisting of a DFplus pilot valve and a main stage with poppet and LVDT. Oriented windows in the optimized sleeves permit optimum adaption of the control manifold block design. With the DFplus pilot valve the TFP achieves extremely fast response times: from 18 ms (NG50) up to 32 ms (NG100). The integrated electronics in the pilot of the TFP has two control loops for the main poppet and the pilot spool.

The pilot valve actively controls the poppet - independent of the pressure conditions in the main ports. For using the maximum TFP valve dynamics Parker recommends a minimum pilot pressure on the same level as the system pressure. Generally, a pilot pressure below 140 bar can affect the valve dynamics and lead to deviations from the specified data for step and frequency response.

TFP063

Features

- Active pilot operated 2-way servo proportional valve
- Cavity and mounting pattern according to ISO 7368
- Fast step response
- Flow direction B to A and A to B
- Completely mounted and adapted unit with integrated electronics
- In order to ensure the closed position, pilot pressure is required
- 4 sizes, NG50 up to NG100

¹⁾ Only in combination with d4_{max} und t4_{max}.

Please note: the flow capacity of the valve can only be up to 100 % when used with optimized ports d3_{max} and d4_{max}.

Characteristics

The 3-way servo proportional valve with VCD® technology series TPQ are used in applications where high flow has to be precisely controlled at maximum dynamics. Typical applications are die casting, injection moulding and hydraulic presses.

Function

TPQ has a 2-stage design consisting of a DFplus pilot valve and a main stage with spool and LVDT.

With the DFplus pilot valve the TPQ achieves extremely fast response times: from 7 ms (NG25) up to 20 ms (NG80) with an accuracy of <0.1 % of the nominal flow. The pilot valve actively controls the spool – independent of the pressure conditions in the main ports.

It is basically required that the pilot pressure is at the level of the system pressure. At low system pressure the pilot pressure should be min. 140 bar, when high valve dynamics are desired.

The integrated electronics in the pilot of the TPQ has two control loops for the main cone and the pilot spool.

TPQ 040

Features

- Active pilot operated 3-way servo proportional valve
- Cavity according to Parker house norm
- Fast step response
- Flow direction A to T and P to A
- Completely mounted adapted unit with integrated electronics
- In order to ensure the basic position, pilot pressure is required
- 6 sizes NG25 up to NG80

TPQ 040 P

Installation Recommendations / Electronics Series TPQ

Installation recommendation

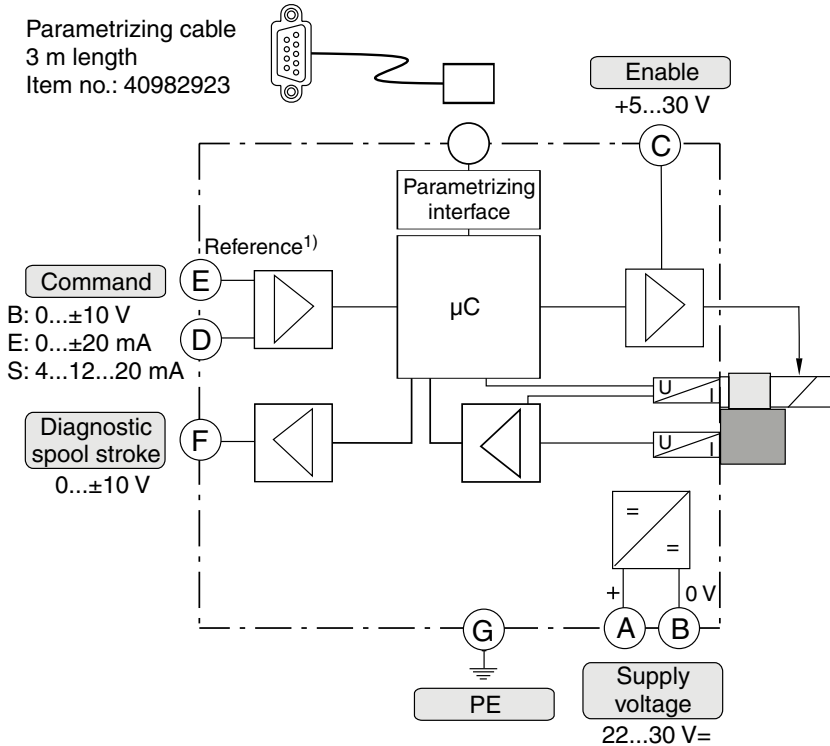

An insufficient pilot oil supply (e.g. due to long distances and/or small diameters) can negatively influence the dynamics of the TPQ valve.

To avoid this, an accumulator can be connected to port XX at the valve body of the TPQ. A short-term undersupply with pilot oil can be compensated via this accumulator.

Sizing data: see operation manual.

Please also consider the Parker accumulator product range and the Parker Accumulator Sizing Software.

Characteristics

Pilot operated pressure relief valves series R5V have a similar design to the subplate mounted R4V series. The SAE flanges allow to mount the valves directly on the outlet flanges of pumps or inlet flanges of actuators to achieve a very compact design.

Valves with SAE flanges can also be bolted together to combine functions without the need of a manifold block.

Features

- Pilot operated with manual adjustment
- Body with 3-ports
 - 4 sizes (SAE 3/4", 1", 1 1/4", 1 1/2")
 - SAE61 and SAE62 flange
- 3 pressure stages
- 3 adjustment modes
 - Hand knob
 - Acorn nut with lead seal
 - Cylinder lock
- With optional vent function

Characteristics

Pilot operated pressure unloading valves series R5U have a similar design to the subplate mounted R4U series. The SAE flanges allow to mount the valve directly on the outlet flanges of pumps.

A typical application is the unloading of a pump in an accumulator circuit. The combination of an R5U, C5V and R5V on a double pump generates a high pressure / low pressure pump system without the need of a manifold block or piping between the valves.

Features

- Pilot operated unloading valve
- 3-port body with SAE61 flange
- 4 sizes (SAE 3/4", 1", 1 1/4", 1 1/2")
- 3 pressure stages
- 3 adjustment modes
 - Hand knob
 - Acorn nut with lead seal
 - Cylinder lock
- With optional vent function

Proportional pressure relief valves series R5V*P2 are based on the mechanically adjusted series R5V. The additional proportional unit between the mechanical pilot valve and the main stage allows continuous pressure adjustment.

The optimum performance can be achieved in combination with the digital amplifier module PCD00A-400.

Features

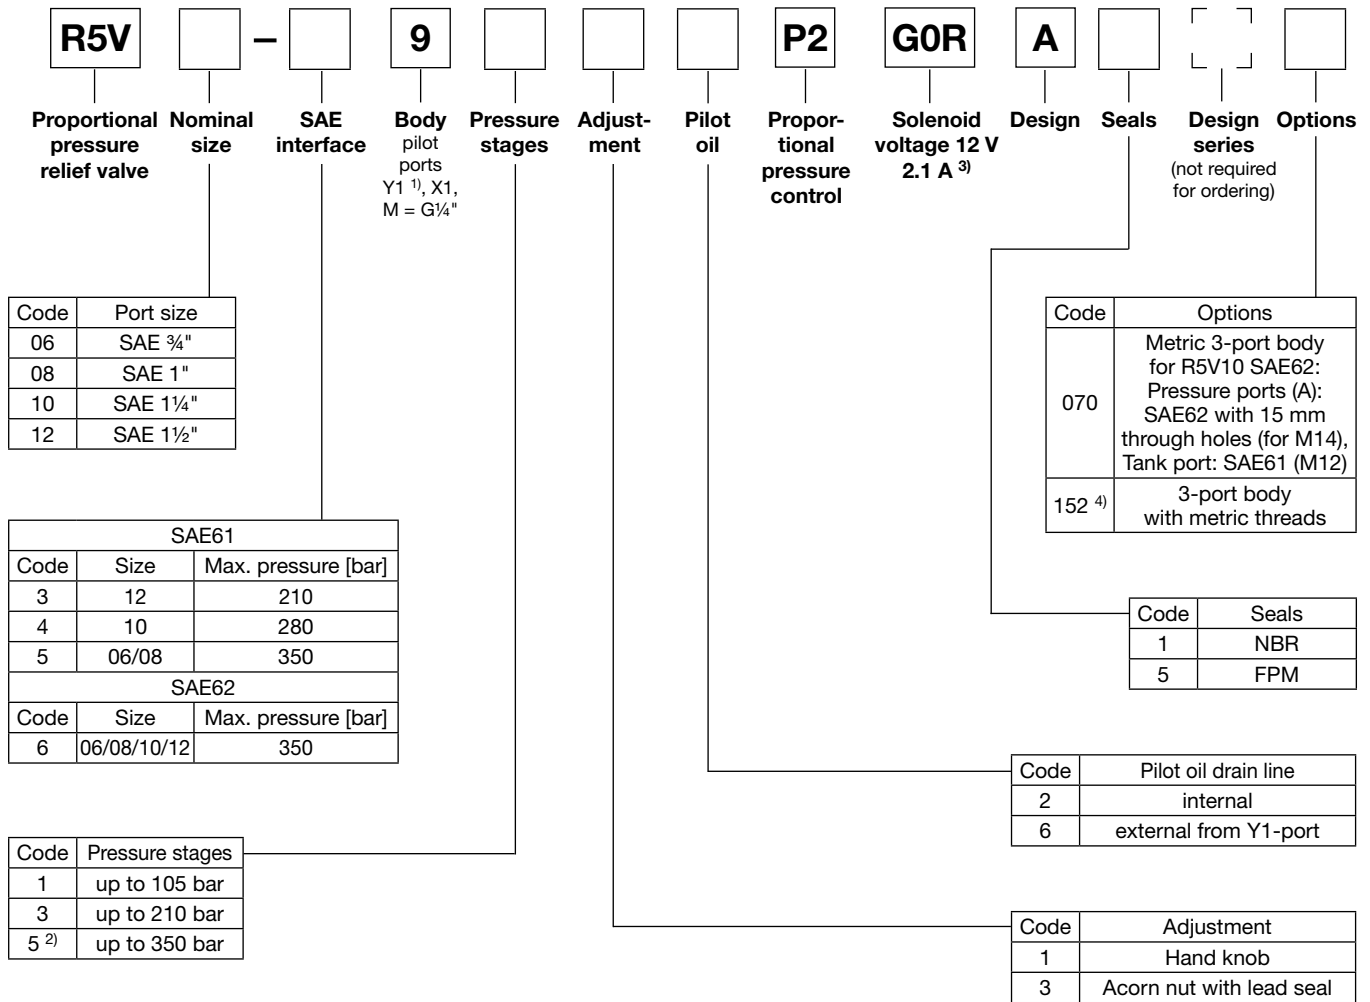

- Continuous adjustment by proportional solenoid
- R5V with 3-port body
 - 4 sizes (SAE 3/4", 1", 1 1/4", 1 1/2")
 - SAE61 and SAE62 flange
- 3 pressure stages
- With mechanical maximum pressure adjustment

Characteristics

Seat valves series D5S are designed for directional control functions. They enable individual hydraulic solutions for nominal flow up to 800 l/min due to a large variety of poppets, springs and covers, including shuttle valves, stroke limiters, solenoid valves (VV01) and position control.

A complete program is offered under the Parker brand:

Subplate mounted valves (Series D4S - chapter 6)

SAE flange valves (Series D5S - chapter 9)

Pipe mounted valves (Series D4S - chapter 10)

Slip-in cartridges (Series CAR - on request)

Features

- Leak-free seat valve design
- SAE61 flange with 3-port body
- Numerous pilot options
- 4 sizes, SAE 3/4", 1", 1 1/4", 1 1/2"
- 6 poppet types

Example: pilot oil external from A, pilot drain internal out of Y1

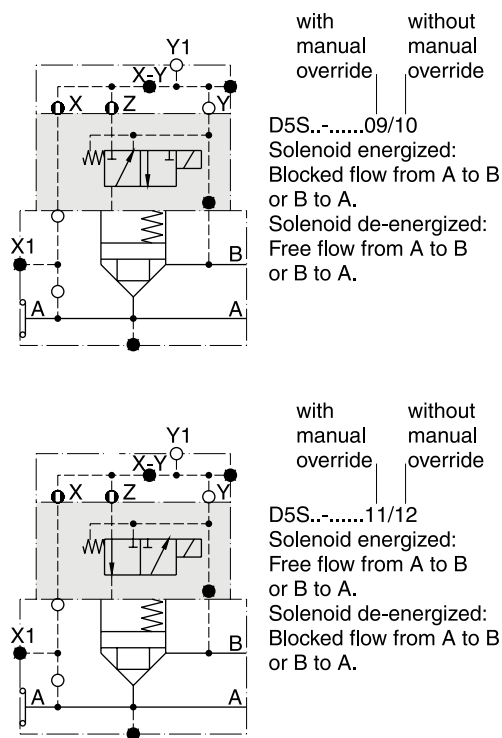

Function

Solenoid de-energized:
 pilot oil from A to Z blocks the connection from A to B or B to A.
 Solenoid energized:
 pilot pressure from A is blocked in the VV01. The oil in Z is internally drained to port Y1. Allowing flow from A to B, while B to A remains blocked.

Characteristics

Proportional throttle valves series F5C allow to adjust the flow in proportion to the input signal. The combination of the F5C with pressure compensators R5A or R5P serves as a flow control valve - providing load compensated flow.

The F5C is offered with two types of response time:

- standard 350 ms at 1 l/min pilot flow
- code A 250 ms at 2 l/min pilot flow

Features

- Spool type proportional throttle valve
- SAE61 flange
- Maximum flow 380 l/min
- 3 sizes, SAE 3/4", 1", 1 1/4"
- Load compensated flow in combination with R5A/R5P

Characteristics

Direct operated 3-way pressure compensators series R5P can be combined with any type of fixed or adjustable flow resistor (throttle) to provide a load compensated flow.

The combination with the proportional throttle valve F5C serves as a compact 3-way flow control unit in SAE flange design. The R5P is typically used as meter-in compensator in front of the flow resistor.

The R5P is additionally equipped with a pressure relief pilot, that controls the compensator cartridge and operates as system pressure relief valve. The R5P*P2 provides a proportional relief function.

Features

- Seated type 3-way pressure compensator
- SAE61 flange
- 8.4 bar control pressure
- Pressure relief function (optionally proportional)
- With optional vent function
- 3 sizes, SAE 3/4", 1", 1 1/4"
- Load compensated flow in combination with F5C

Direct operated check valves series C5V provide free flow in one direction and block the flow in the counter direction.

The SAE flanges allow to mount the C5V directly on the pressure port of pumps for protection against pressure shocks from the system.

Features

- Direct operated check valve
- SAE61 and SAE62 flange
- 4 sizes (SAE ¾", 1", 1¼", 1½")
- 3 springs
- 5 options for body sealing

Characteristics

Pilot operated pressure relief valves for in-line mounting series R4V have a similar design to the subplate mounted R4V series. For single functions – where no manifold blocks are used – the valves can be directly placed in the pipework.

The R4V valves are available with 2 ports (L-body) for in-line relief function or with 3 ports (T-body) for relief functions in the bypass.

Features

- Pilot operated with manual adjustment
- 2 interfaces:
 - L-body (R4V06-G $\frac{3}{4}$ ", R4V10-G1 $\frac{1}{4}$ ")
 - T-body (R4V03-G $\frac{1}{2}$ " , R4V06-G1")
- 3 pressure stages
- 3 adjustment modes
 - Hand knob

Characteristics

Pilot operated pressure reducing valves for in-line mounting series R4R have a similar design to the subplate mounted R4R series. For single functions – where no manifold blocks are used – the valves can be directly placed in the pipework.

The valves are available with 2 ports (L-body) or with 3 ports (T-body).

Features

- Pilot operated with manual adjustment
- Normally closed to avoid undesired motion
- 2 interfaces
 - L-body (R4R06-G $\frac{3}{4}$ ", R4R10-G1 $\frac{1}{4}$ ")
 - T-body (R4R03-G1 $\frac{1}{2}$ " , R4R06-G1")
- 3 pressure stages
- 3 adjustment modes
 - Hand knob
 - Acorn nut with lead seal
 - Cylinder lock
- With optional vent function

Characteristics

Proportional pressure relief valves series R4V*P2 are based on the mechanically adjusted series R4V. The additional proportional unit between the mechanical pilot valve and the main stage allows continuous pressure adjustment.

The optimum performance can be achieved in combination with the digital amplifier module PCD00A-400.

Features

- Continuous adjustment by proportional solenoid
- 2 interfaces
 - L-body (R4V06-G $\frac{3}{4}$ ", R4V10-G1 $\frac{1}{4}$ ")
 - T-body (R4V03-G $\frac{1}{2}$ ", R4V06-G1")
- 3 pressure stages
- With mechanical maximum pressure adjustment

Characteristics

Seat valves series D4S are designed for directional control functions. A large variety of poppets, springs and covers – including shuttle valves, stroke limiters, solenoid valves (VV01) and position control – allows to design individual hydraulic solutions for nominal flow up to 600 l/min.

A complete program is offered under the Parker brand: subplate mounted valves (D4S - chapter 6), SAE flange valves (D5S - chapter 9), pipe mounted valves (D4S - chapter 10), slip-in cartridges (CAR - on request).

D4S10 L-body

Features

- Leak-free seat valve design
- 2 body designs
 - L-body (2-port)
 - T-body (3-port)
- Numerous pilot options
- 4 port sizes
 - G 1/2", G 1" for T-body
 - G 3/4", G 1 1/4" for L-body
- 6 poppet types

Manatrol needle valve, optional with 30° poppet, V-notch, or rectangular slot. The form of the throttle opening influences the accuracy of the flow setting, which depends on pressure and viscosity. The needle is made of stainless steel and corresponds to a ring gap in the valve body.

Characteristics / Ordering Code

Manatrol stop and throttle valves with 2-stage needle cone. Fine adjustment for the first stage can be achieved with 3 rotations of the adjustment knob. The second stage with normal throttle characteristics is achieved with 3 further rotations. A cylindrical needle with a rectangular slot is provided to reduce the viscosity effect for sizes 200 up to 600. The flow is dependent on pressure and viscosity.

Characteristics / Ordering Code

Manatrol throttle check valves of series F with fine adjustment of the flow rate for a defined flow direction. The built-in check valve allows free flow in the counter direction with low flow resistance. A 2-stage needle provides very exact setting of smaller flow rates with the first three rotations of the adjustment knob. After 3 more rotations, the valve is completely open. The valve setting can be locked with the locking screw.

* For alternative thread design, see ordering code.

Pilot operated check valves series RH allow free flow in one direction (B to A). The counter flow is blocked (A to B). By applying pilot pressure the ball can be lifted from its seat and allow flow from A to B.

Most common use:

- Keeping cylinders leak-free in position, when spool type directional control valves are used
- Return line discharge, when return flow exceeds functional limits of directional control valve at differential cylinders
- As hydraulically activated drain or circulation valve

The valves are available without and with hydraulic pre-discharging.

Without pre-discharging

These valves have a ball as valve element, which quickly enables the full flow cross-section proportionally during pilot operation. A metering position in the pilot port dampens the control movement of the pilot spool so that pressure shocks (unloading shocks) are mostly suppressed.

With pre-discharging

For valves with pre-discharging a spherical polished valve spool (seat valve function) is built-in instead of a ball. The additional check valve achieves a pre-opening which provides shock-free unloading of the fluid, especially at high working pressure and large volumes.

EX-M05	Test unit for items with integrated electronics																	11-44

Characteristics / Ordering Code

Parker electronic modules PWD00A-400 for rail mounting are compact, easy to install and provide time-saving wiring by disconnectable terminals. The digital design of the circuit results in good accuracy and optimal adaptation for proportional directional control valves by a comfortable interface program.

Features

The described electronic unit combines all necessary functions for the optimal operation of proportional directional control valves without position sensor (series D*FB, D*1FB). The most important features are:

- Digital circuit design
- Four parameterizable command channels
- Constant current control
- Differential input stage
- Status output
- Four-quadrant ramp function
- Enable input for solenoid driver
- Status indicator
- Parametering by serial interface RS232C
- Connection by disconnectable terminals
- Compatible to the relevant European EMC standards
- Comfortable PC user software, free of charge:
www.parker.com/euro_hcd - see "Support", or directly at www.parker.com/propxd.

General		
Model		Module package for snap-on mounting on EN 50022 rail
Package material		Polycarbonate
Inflammability class		V0 acc. UL 94
Installation position		unrestricted
Ambient temperature range	[°C]	-20...+60
Protection class		IP 20 acc. EN 60529
MTTF _D value	[years]	150
Weight	[g]	160
Electrical		
Duty ratio	[%]	100
Supply voltage	[VDC]	18...30, ripple < 5 % eff., surge free ¹⁾
Current consumption max.	[A]	2.2
Pre-fusing	[A]	2.5, medium lag
Command signal	[V]	+10...0...-10, ripple < 0.01 % eff., surge free, Ri = 150 kOhm
Input signal resolution	[%]	0.025
Differential input voltage max.	[V]	30 for terminals 5 und 6 against PE (terminal 8)
Enable signal	[V]	0...4.0: Off / 9.0...30: On / Ri = 30 kOhm
Command channel signal	[V]	0...4.0: Off / 9.0...30: On / Ri = 30 kOhm
Status signal	[V]	0...0.5: Off / Us: On / rated max. 15 mA
Adjustment ranges		
Min	[%]	0...50
Max	[%]	50...100
Ramp	[s]	0...32.5
Zero offset	[%]	+100...-100
Current	[A]	0.8 / 1.3 / 1.8 / 2.7 / 3.5
Interface		RS 232C, DSub 9p. male for null modem cable
EMC		EN 50081-2, EN 50082-2
Connection		Screw terminals 0.2...2.5 mm ² , disconnectable
Cable specification	[mm ²]	1.5 overall braid shield for supply voltage and solenoids (AWG16)
	[mm ²]	0.5 overall braid shield for sensor and signal (AWG20)
Cable length	[m]	50

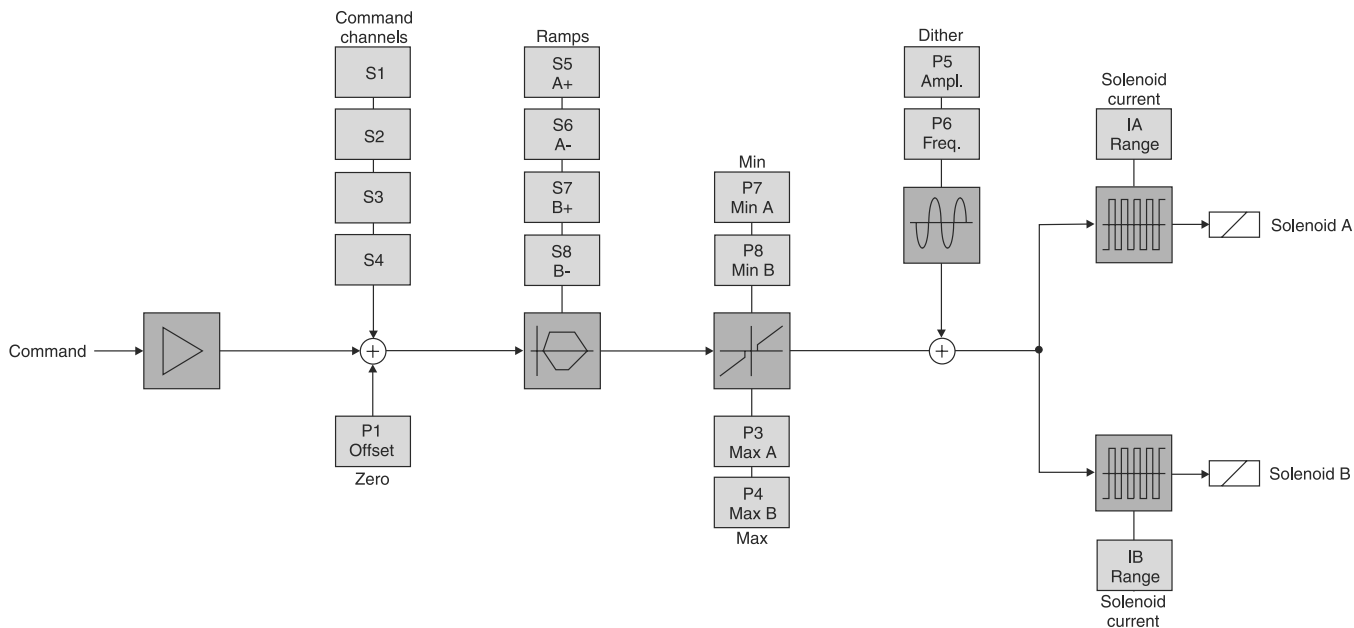

Block diagram

¹⁾ If solenoids with a nominal voltage of 24 V are connected, the supply voltage has to be raised to 29 V.

ProPxD interface program

The ProPxD software permits comfortable parameter setting for the module electronics. Via the clearly arranged entry mask the parameters can be monitored and modified. Storage of complete parameter sets is possible as well as printout or record as a text file for further documentation. Stored parameter sets may be loaded anytime and transmitted to other valves. Inside the electronics a nonvolatile memory stores the data with the option for recalling or modification.

The PC software can be downloaded free of charge at www.parker.com/euro_hcd – see page “Support” or directly at www.parker.com/propxd.

Features

- Comfortable editing of all parameters
- Depiction and documentation of parameter sets
- Storage and loading of optimized parameter adjustments
- Executable with all actual Windows® operating systems from Windows® XP upwards
- Plain communication between PC and electronics via serial interface RS232C

Characteristics / Ordering Code

Parker electronic modules PWDXXA-40* for rail mounting are compact, easy to install and provide time-saving wiring by disconnectable terminals. The digital design of the circuit results in good accuracy and optimal adaptation for proportional directional control valves with position sensor by a comfortable interface program.

Features

The described electronic unit combines all necessary functions for the optimal operation of proportional directional control valves with position transducer or valves in closed loop systems. The most important features are:

- Digital circuit design
- Parameterizable position control of valve spool
- Constant current control
- Differential input stage with different signal options
- Monitor output for spool stroke
- Four-quadrant ramp function
- Enable input for solenoid driver
- Status indicator
- Parametering by serial interface RS232C
- Connection by disconnectable terminals
- In combination with valves without spool feedback
 - Pressure control with proportional pressure valve and pressure sensor
 - Position control with proportional DC valve and actuator position transducer
- Optional technology function "linearization"
- Comfortable PC user software, free of charge: www.parker.com/euro_hcd - see "Support", or directly at www.parker.com/propxd.

Characteristics / Ordering Code

Parker electronic modules series PCD00A-400 for rail mounting are compact, easy to install and provide time-saving wiring by disconnectable terminals. The digital design of the circuit results in good accuracy and optimal adaption for proportional pressure/flow control valves by a comfortable interface program.

Features

The described electronic unit combines all necessary functions for the optimal operation of two proportional pressure/flow control valves (series R*R, R*V, RE*E*W, RE06M*W, DUR, PRPM, VBY, VMY, TDA, TEA).

The most important features are:

- Digital circuit design
- Two independent operable amplifiers
- Four parameterizable command channels
- Constant current control
- Two input stages 0...10 V
- Status output
- Two up/down ramp functions
- Enable input for solenoid driver
- Status indicator
- Parametering by serial interface RS232C
- Connection by disconnectable terminals
- Compatible to the relevant European EMC standards
- Comfortable PC user software, free of charge: www.parker.com/euro_hcd - see "Support", or directly at www.parker.com/propxd.

Characteristics / Ordering Code

Parker electronic modules PZD00A-40* for rail mounting are compact, easy to install and provide time-saving wiring by disconnectable terminals. The digital design of the circuit results in good accuracy and optimal adaptation for command signal processing by a comfortable interface program. The electronic unit may be connected in series to proportional valves with onboard electronic as well as to amplifier modules P*D.

Features

- Digital circuit design
- Six parameterizable command channels with optional additive or priority dependent signal processing
- Output stage with different signal options
- Input stage with different signal options
- Status output
- Four-quadrant ramp function
- Reference output for potentiometer supply
- Status indicator
- Parametering by serial interface RS232C
- Connection by disconnectable terminals
- Compatible to the relevant European EMC standards
- Optional technology function "linearization"
- Comfortable PC user software, free of charge: www.parker.com/euro_hcd - see "Support", or directly at www.parker.com/propxd.

- Plain communication between PC and electronics via serial interface RS232C

The Compax3F is a part of the servo drive family of Parker Hannifin. It is especially designed for the requirements of electrohydraulic systems and in particular for position and force control of electrohydraulic axis.

Attention:

For application support and customized software, please contact your local Parker representative.

Large drive range

- Valves:
 - Proportional direction control valves
 - Proportional pressure relief- and pressure reducing valves
 - Flow valves
- Drives:
 - Cylinders
 - Rotary drives
 - Motors

Range of application

- Closed loop position and force control of linear cylinders and rotary drives
- Switching between position and force control
- Synchronous run with up to 64 axes

Typical applications

- Feeder axis
- Position and force control of press cylinders in material forming machines
- Roller clearance control in roller presses
- Die casting machines
- Custom-designed software packages on request

Project development, commissioning and programming

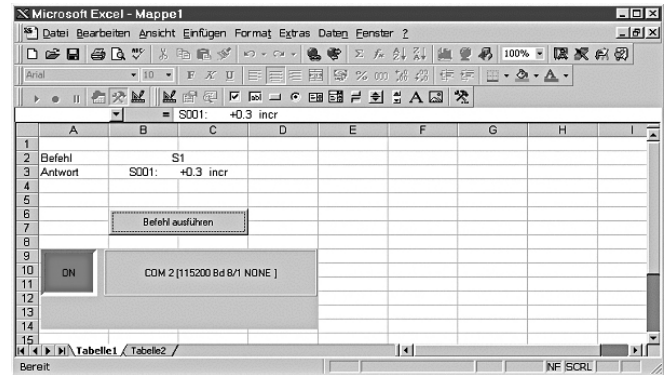

- Optimized co-ordination of complete mechatronic systems
- Valve and Drive manager
 - All technical data of Parker valves, cylinders and drives available
 - Additionally support through the Compax3F Hydraulics-Manager by configuration of user defined valves and drives.

Software download, free of charge:
http://solutions.parker.com/c3_support

ActiveX plug-in for Integration with the Office environment

- Office and industrial environments are constantly growing closer together.
- The use of ActiveX technology allows simple integration into Office application.

Interface - Field bus

- Profibus DP
- CANopen (CiADS402)
- DeviceNet
- PowerLink
- EtherCAT
- Profinet
- Address configurable via Dip switch

International standards in programming

- Programming system
 - CoDeSys
- Programming language
 - IEC61131-3
 - Function modules based on PLCopen

Jerk-limited set point generation, resulting in

- Gentle handling of the items being moved
- Increased service life of mechanical components
- Overshoot-free positioning
- Reduced excitation of mechanical resonance frequencies

Control

a) General

- 2 control loops for each axis for combined position and force/pressure control

b) Position control

- Automatic controller design for position control
 - User-oriented optimization of parameters
- Feed forward control of speed and acceleration which results in:
 - Optimization of the response behaviour
 - Minimization of the following error

c) Force/Pressure controller

- PID controller with feed forward control of speed

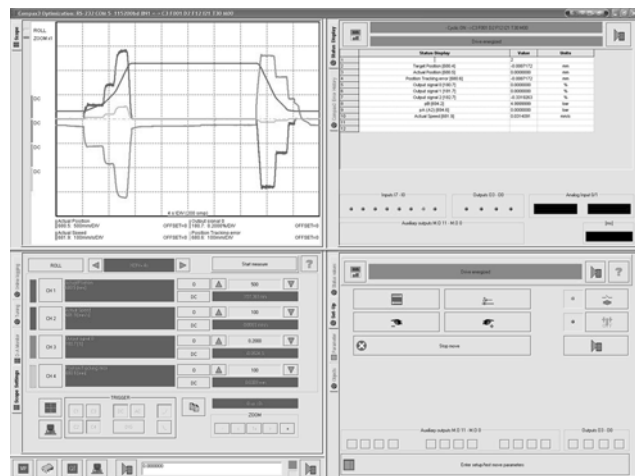

d) 2-axis synchronous run and hydraulic specific functions

- Realization of many different circuit concepts with up to 4 proportional valves possible
- Linearization functions:
 - Consideration of the area of differential cylinders
 - Inverting of the valve set value
 - Compensation of the load pressure (additional pressure sensors necessary)
 - Correction of the nonlinear flow characteristic of the valve
 - Overlap compensation
 - Valve zero point correction
 - Valve set value filters
 - Valve set value limitation
 - All functions for each valve individually available
 - Automatic configuration by component selection in the Compax3 ServoManager

e) Custom-designed software packages on request

Set up controller optimization

- Compax3F HydraulicsManager
 - All necessary technical data of Parker valves and drives are available
 - additional supported
- Test movement for automatic controller attitude
- Optimization with integrated oscilloscope function
- Automatic pre-setting of the controller for position control possible

11

Benefits

- No programming skills necessary
- Set table with various motion
- Full controller range available
- An ideal basis for many applications in high-performance motion automation

Function range T11

- Set tables for positioning, pressure and force control up to 31 motion profiles:
 - Absolute or relative positioning
 - Force/pressure control
 - Speed control
 - Electronic gearing
- Superimposed force and pressure control
- Controller switching between position and force/pressure control

Extended Function range

- Absolute force control
- Superimposed force and pressure control
- Controller switching between position and force/pressure control
- 2-axis synchronous

Absolute or relative positioning

A motion set defines a complete motion with all settable parameters

1. Target position
2. Travel speed
3. Maximum acceleration
4. Maximum deceleration
5. Maximum jerk

Stop movement

The Stop set interrupts the current motion set

Reg-related positioning

For registration mark-related positioning, 2 motions are defined:

- RegSearch: Search of an external signal, e.g. a registration mark on a product
- RegMove: The external signal interrupts the search movement and the second movement by an offset follows without transition
- Precision of the registration mark detection: <math><1\mu s</math>

Electronic Gearbox:

Motion synchronized to a master axis with any transmission ratio. The position of a master axis can be detected via:

- ± 10 V analog input
- Step/direction command Input
- the encoder input or
- HEDA, with Compax3 Master

Dynamic positioning

A new motion profile can be selected during a positioning sequence - a smooth transition takes place.

11

General

Due to its high flexibility and efficiency the Compax3 motion control according to PLCopen is for most applications the optimal basis for decentralized motion control.

Positioning with function modules based on PLCopen

- Programmable based on IEC61131-3
- Programming system: CoDeSys
- Up to 6500 instructions
- 500 16-bit variables / 150 32-bit variables
- Recipe table with 288 variables
- 3 16-bit saved variables (power failure protected) / 3 32-bit saved variables (power failure protected)
- PLCopen-function modules:
 - Positioning: absolute, relative, additive and continuous
 - Machine zero
 - Stop, energizing the power stage, quit
 - Position, device status, reading axis error
 - Electronic gearbox (Mc_GearIn)
- IEC61131-3-standard modules:
 - Up to 8 timers (TON, TOF, TP)
 - Trigger (R_TRIG, F_TRIG)
 - Flip-flops (RS, SR)
 - Counters (CTU, CTD, CTUD)
- Device-specific function modules:
 - C3_Input: reading digital inputs
 - C3_Output: writing digital outputs
 - C3_ReadArray: access to recipe table
- Inputs/outputs:
 - 8 digital inputs (24 V level)

- 4 digital outputs (24 V level)
- 6 analog inputs (14 bits)
- 4 analog outputs (16 bits)
- Optional addition of 12 digital inputs/outputs

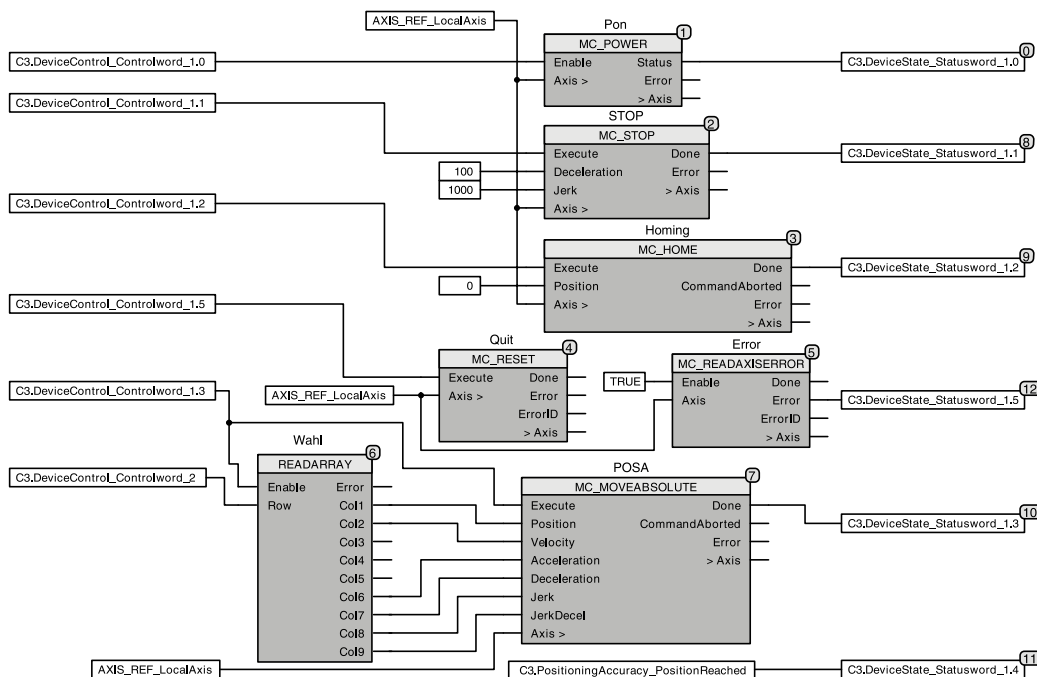

PLCopen function blocks

- Absolute positioning
- Relative positioning
- Additive positioning
- Continuous positioning
- Stop
- Machine zero
- Energizing the power output stage
- Reading device status
- Reading axis error
- Acknowledging errors
- Reading the current position
- Electronic gearbox (gearing)

Example of an field bus interface controlled IEC61131-application

- 2 control words are placed on the cyclic channel of the bus.
- The position data records (position, speed, acceleration etc.) are stored in a table (array).
- The desired position data record is selected with Controlword_2.
- The individual bits of Controlword_1 control positioning.
- A return message is sent via a status word on the cyclic channel of the bus.

Example of a bus interface controlled IEC61131 application

General

Compax3 T40 is able to simulate mechanical cams and cam switching mechanisms electronically. The T40 electronic cam was especially optimized for:

- The packaging machine industry
- The printing industry
- All applications, where a mechanical cam is to be replaced by a flexible, cyclic electronic solution

This helps to solve discontinuous material supply, flying-knife and similar drive applications using distributed drive technology.

Compax3 T40 supports both real and virtual master movements. In addition, the user can switch to other cam profiles or cam segments ,on the fly'.

Programming is carried out in the well-known IEC61131-3 environment.

With the aid of the cam function modules and CamDesigner, cam applications can be implemented very easily.

Function T40

- Technology functions of the T30 version fully integrated and available
- Master position acquisition
- Mark synchronization
- Cam switching mechanism
- Coupling and decoupling function
- Cam profiles
- Cam memory
- Cam creation with CamDesigner

Master position acquisition

- Acquisition by incremental encoder
- Acquisition by the HEDA real-time bus
- Virtual Master:

A second axis in the IEC program can be used to program a motion profile, which serves as a master for one or several axes.

Mark synchronization

- Master or slave oriented (simultaneous, cam-independent)
- Highly-precise mark recognition (accuracy <1µs; Touchprobe)

Cam switching mechanism

- 36 cams with individual profiles
- 4 fast cams (125 µs per cam) standard: 500 µs
- 32 serial cams, 16 ms/cam cycle (0.5 ms/cam)
- Delay-time compensated cams: Compax3 can advance the cam to compensate for delays in switching elements.

11

Coupling and decoupling functions

- By means of a set point generator
- By means of a change-over function
- Without overspeeding by coupling over several master cycles
- Virtually free set-up of the coupling and decoupling movement
- Master-guided coupling movement
- Random standstill position

Cam profiles

- Up to 20 cam segments can be produced by:
- Virtually random cam links (forwards and backwards)
- Freely programmable event-controlled cam branches
- Scalable cam segments and complete cam profiles

Cam memory

- 10,000 points (Master/Slave) in 24-bit format
- High-precision profile generation:
 - Variable point spacing with full backup of the current-master and slave coordinates (even if the power fails)
 - Linear interpolation between points
- Cam memory for up to 20 curves

Interfaces

Connection of high-level controllers

**a) Control via digital inputs/outputs
Compax3 I11T30 / I11T40 / I12T11**

The digital I/Os can be optionally extended by 12 I/Os (M10 and M12 option).

**b) Control via Profibus,
Compax3 I20T11 / I20T30 / I20T40**

Profibus-ratings	
DP-Versions	DPV0 / DPV1
Baud rate [MBit/s]	up to 12
Profibus ID	C320

c) Control via CANopen, Compax3 I21T30 / I21T40

CANopen-ratings	
Baud rate [kBit/s]	20, 50, 100, 125, 250, 500, 800, 1000
Service-Data-Object	SDO1
Process-Data-Objects	PDO1, ... PDO4

d) Control via DeviceNet, Compax3 I22T30 / I22T40

DeviceNet-ratings	
I/O - data	up to 32 bytes
Baud rate [kBit/s]	125...500
Nodes	up to 63 Slaves

**e) Control via Ethernet Powerlink,
Compax3 I30T30 / I30T40**

Ethernet Powerlink ratings	
Baud rate	100 Mbits (FastEthernet)
Cycle time	<200 µs; to 240 nodes

**f) Control via EtherCAT
Compax3 I31T30 / I31T40**

EtherCAT-ratings	
Bau drate	100 Mbits (FastEthernet)
Cycle time	<200 µs; to 240 nodes

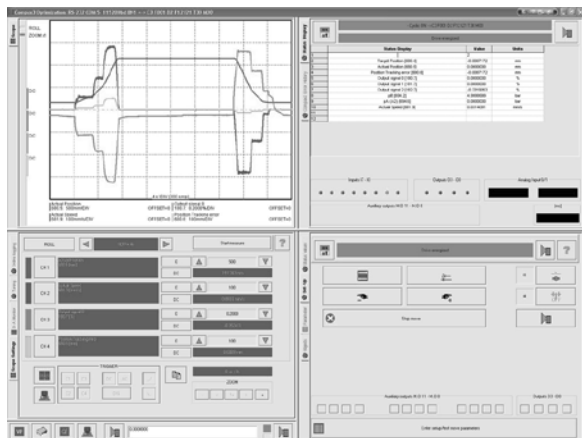

g) Control via Profinet I32T11 / I32T30 / I32T40

Profinet ratings	
Profinet version	Profinet IO (RT)
Transmission mode	100 BASE-TX (Full Duplex)
Profinet ID	C332

Software Tool C3 ServoManager

Configuration is carried out on a PC using the Compax3 ServoManager.

- Wizard-guided configuration
 - Automatic querying of all necessary entries
 - Graphically supported selection
- Setup mode
 - Moving individual axes
 - Predefined profiles
 - Convenient operation
 - Storage of defined profiles
 - Controller pre-setting possible
- Integrated 4-channel oscilloscope
 - Signal tracing directly on the PC
 - Various modes (single/normal/auto/roll)
 - Zoom function
 - Export as image or table (for example to Excel)

Software Tool HydraulicsManager

- Simple set up of customer valves, cylinders and drives.
- Technical data of all Parker valves, cylinders and drives available.

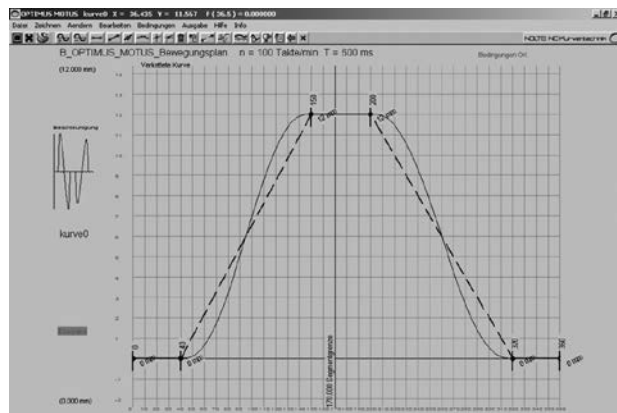

C3 HydraulicsManager valve database

Software Tool CamDesigner

- Standardized Nolte cam generating tool with:
 - Standard or extended range of functions
 - Evaluation of the motion profiles
 - Verification of the drive sizing
- Transition laws from VDI directive 2143:
 - Selection of motion laws
 - The CamDesigner basic version features 15 motion laws (based on the dwell-to-dwell (interpolation method))

Evaluation of the motion profile

Cam generation with the integrated CamEditor

IEC61131-3 Programming language

IEC61131-3 is the only company- and product-independent programming language with worldwide support for industrial automation devices.

- IEC61131-3 includes graphical and textual programming languages:
 - Instruction list
 - Structured text
 - Ladder diagram
 - Sequential function chart
 - Function block diagram

Integrated standards offer:

- A trusted programming environment
- Standardized programming

Integrated standards reduce:

- The overhead of development
- Maintenance costs
- Software upkeep
- Training overhead

Integrated standards increase:

- Productivity
- Software quality
- Concentration on core competence

Examples

- Program development in IL

- Function plan

Function modules based on PLCopen

PLCopen is a product- and company independent organization that plays a significant role in supporting the IEC61131-3 programming language. Its specific tasks also include defining basic processes relevant to motion. The PLCopen organization consists of both users and manufacturers of automation components.

Parker Hannifin is an active member of the “Motion Control” task force. This is a great advantage for the users of Parker drive technology, since they are constantly able to profit directly from the latest developments in PLCopen.

Professional development tool CoDeSys

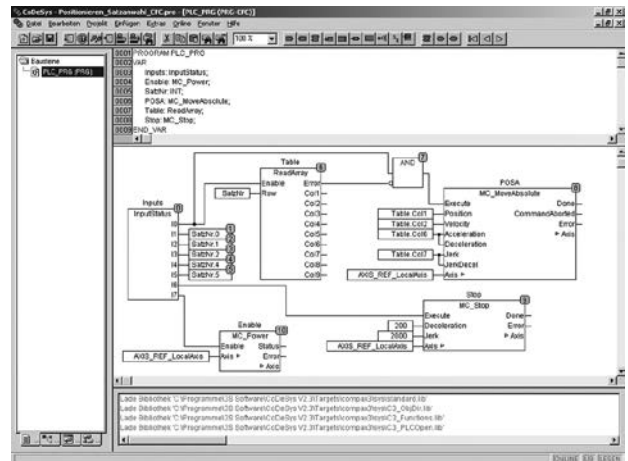

CoDeSys is a development environment for programming that saves a significant amount of time as applications are created.

- One of the most powerful development environments available, established world-wide
- Universal programming platform for various devices
- Visual elements
- Library management for user-defined applications
- Context-sensitive help wizard
- Data exchange between devices from different manufacturers
- Complete online functionality
- Sophisticated technological features
- Standard function modules deposited
- ... and all this free of charge

Parker is a member of the “CoDeSys Automation Alliance”.

Program development in CFC

Project management

Saving an entire project (source file) including symbols and comments to make service calls easier, because there is no need for any project data on the device itself

- Archiving projects as ZIP files
- Creating user-specific libraries that can be reused as tested sections of programs
 - These libraries can be protected
 - Examples include winders, synchronization components etc.
- Various user levels make it possible to lock sections of the program with passwords
- Depending on the task at hand, users can select from among 5 IEC languages plus CFC. These languages can also be mixed

Accessories

Connection set ZBH../.. (included in delivery)

Complete kit with mating plug connectors (X1, X2 and X3) for Compax3 connectors, special shield connecting terminal and snap-on foot for mounting rail.

Feedback cable GBK../..

Connection to the transducer:

Under the designation "REK.. + GBK.." (Feedback cable) we can deliver feedback connecting cables in various lengths to order.

- Prefabricated with plug and cable eye
- The plugs of the feedback cables contain a special surface area screening.
- Cable plans, if you wish to make up your own cables

Terminal block EAM06../..

For additional wiring of the inputs and outputs:

- Available with or without LED display
- Can be mounted in the control cabinet on a supporting rail
- Connection EAM06../.. via SSK23../..to X11, SSK24../.. to X12

RS232 cable SSK01../..

(in various lengths).

Configuration:

Via a PC with the aid of the Compax3 ServoManager.

Communication:

Communication with Compax3 either via RS232 or via RS485 in order to read or write into objects.

Servo Drive Series Compax3F

Profibus plug BUS08/01

- BUS08/01 with 2 cable inputs (1x BUS08/01 incoming, 1x BUS08/01 continuing) and screw terminals, as well as a switch for activating the terminating resistor. Set to ON for first and last bus node terminating resistor activated.

Profibus cable: SSL01../.. not prefabricated

- Special cable in any length for Profibus wiring (colors according to DESINA).

HEDA Bus

HEDA bus terminal connector (RJ45) BUS07/01:

- For the first and last Compax3 in the HEDA bus.

HEDA cable: SSK28../.. prefabricated in various lengths:

- Cable for HEDA bus wiring from Compax3-to-Compax3 or PC-to-Compax3 powerPLmC or wiring of
 - Ethernet Powerlink (I30)
 - EtherCAT (I51)
 - Profinet (I32)

CANbus plug BUS10/01

- BUS10/01 with 2 cable inputs (1x BUS10/01 incoming, 1x BUS10/01 continuing) and screw terminals, as well as a switch for activating the terminating resistor. Set to ON for first and last bus node terminating resistor activated

CANbus cable SSL02../.. not prefabricated

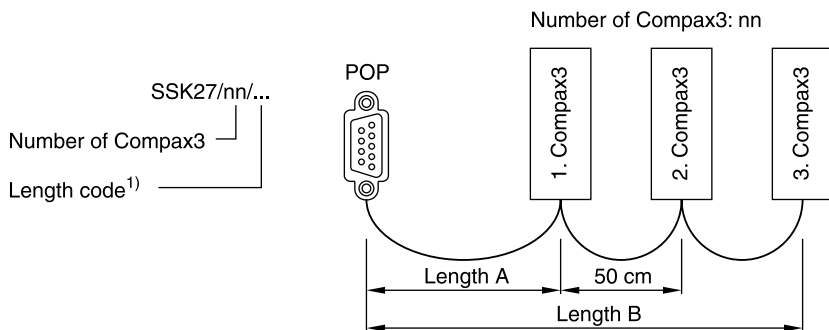

- Special cable in any length for CANbus wiring (colours according to DESINA)

Characteristics

The new Parker Automation Controller PAC120 is a PLC with integrated, programmable software and EtherCAT master function. It was developed for the automation of fast and precise hydraulic processes. Together with the control module PACHC, it enables the position and force/pressure control of up to 40 hydraulic axes. In combination with the PACIO modules it can take over complete control.

Due to its extremely compact dimensions and its modular design, the PAC120 can be used in many different applications. Data exchange with other systems is firstly possible via the on-board Industrial Ethernet and OPC UA interfaces. In addition, further communication links can be realized by use of interface and bus modules. This also facilitates system integration in existing control architectures. Using an extender module enables to actuate external EtherCAT slaves.

Technical features

- Fanless ARM processor technology
- CODESYS V3.5
- Connectors for Ethernet and EtherCAT
- Profinet IRT Slave
- OPC UA
- SD card slot and USB interface
- Digital interrupt input
- CODESYS WebVisu
- Expandable by Parker PACHC and PACIO modules

Ordering Code

Technical Data

General	
Function	Mini-IPC with integrated CODESYS SPS and EtherCAT master function for I/O modules systems PACHC and PACIO
Housing / protection class	Aluminium strap, plastic, IP20
Mounting	35 mm DIN rail
Mounting position	Vertical, stackable
Operation temperature	0 °C...+55 °C
MTTF _D value	33.6 a
Weight	0.2 kg
Electrical	
CPU	i.MX6 SoloX Freescale 1 GHz
RAM / remanent memory	256 MB / buffering in flash
Drives	256 MB internal flash memory, SD (HC) card slot
Operating system	Linux RT
Software	Application: CODESYS V3 Soft SPS with web visualization
Network	1 x Ethernet 10/100 MBit - RJ45, OPC UA
Field bus interfaces	Master: EtherCAT internal via E-Bus interface, external via extender module; 1 x CAN galvanic isolated Slave: Profinet I/O, IRT
Integrated I/Os	1x DI 1 ms
Clock	Real-time clock with battery buffering
Power supply	24 V DC (19.2... 28.8)
E-bus current supply	3 A
Output	Ca. 3.5 W (@ 24 V DC)
Potential separation	Modules are potential separated against each other and bus
CE conformity	2004/108/EC
Insulation requirements	Protection class III according to EN 601131-2 Power circuits class 2 according to EN 601131-2 Contact protection according to EN 601131-2 (IEC 60529) Overvoltage category zone 3 according to EN601131-2 Degree of contamination 2 according to EN 50178
EMC	2014/30/EU
Noise stability	Zone B according to EN61131-2, Mounting on grounded rail in grounded control cabinet
Environmental conditions	Relative humidity 5 % ... 95 % w/o dew
Storage temperature	-25 °C...+70 °C
UL certification	Certified: E-File-No. E506274

Development Environment CODESYS V3.5

CODESYS V3.5 is a device-independent system for programming control units designed to handle many tasks of industrial automation technology. It conforms to standard IEC 61131-3 and supports all standardized IEC programming languages and object-orientated programming.

In conjunction with runtime system CODESYS Control Win V3 it also allows the use "multi-device" and "multi-application" programs. Owing to its component-based architecture, it supports customer-specific configurations of and extensions to the user interface.

Applications can be optimized by using industry standard PLCopen Motion Control components for motion control programming, deploying to the powerful simulation runtime for faster development and using online variable watch and trending for logic analysis.

Dimensions

Accessories

Parker Control Module PACHC

The PACHC is a control module for high-dynamic and precise control of 1-2 hydraulic axes. It was developed for operation at the Parker Automation Controller PAC120. The device is an EtherCAT slave and is operated at the Parker E-Bus. In conjunction with the bus coupler PACIO-400-00 it can be used in a standard EtherCAT network. The PACHC is connected to local analog sensors like pressure and force sensors and digital position feedback systems for recording actual values. Hydraulic valves are controlled via the analog outputs.

For further information see separate catalogue file for the PACHC.

Parker Remote I/O System PACIO

The PACIO System comprises a variety of modules for digital, analog and temperature signals as well as communication interfaces. The modules connect directly to the controller via the built-in EtherCAT bus for local architectures and are extended to remote locations via the extender and bus coupler modules, thus supporting both local and distributed I/O architectures. PACIO communicates natively on the EtherCAT bus, therefore it provides the full functionality and throughput of high-speed EtherCAT to meet the most demanding real-time requirements. For further information see Parker catalogue 192-122003.

11

Characteristics

The new PACHC is a control module for operation at a Parker Automation Controller (PAC) for high-dynamic and precise control of hydraulic axes. The PACHC enables position, force and pressure control as well as change-over control. In conjunction with a PAC120 or PAC320 it is used as EtherCAT slave. It features analogue as well as digital sensor inputs.

The PACHC is connected to local analogue sensors like pressure and force sensors and digital position feedback systems for recording actual values. Hydraulic valves are controlled via the analogue outputs.

Features

- Position, force and pressure control for 1-2 axes
- Sampling time 250 µs
- Digital interfaces for position feedback systems (SSI, Encoder TTL/HTL/RS422, EnDAT)
- 4 analogue inputs (0... 10 V, 0... 20 mA)
- 4 analogue outputs (-10... 10 V, 0... 20 mA)
- Fail-safe storage of all device parameters in Flash
- Library with comprehensive motion functions
- Freely available application templates
 - Synchronization of 2 axes
 - Synchronization of 4 axes
 - Change-over position/force control
 - Table of records
- Application-specific software solutions (optional)

Parker Automation Controller PAC120

The new Parker Automation Controller PAC120 is a PLC with integrated, programmable software and EtherCAT master function. It was developed for the automation of fast and precise hydraulic processes. Together with the control module PACHC, it enables the position and force/pressure control of up to 40 hydraulic axes. In combination with the PACIO modules it can take over complete control. Through its compact dimensions and its modular design, it can be used in various applications.

For further information see separate catalogue file for the PAC120.

Parker Remote I/O System PACIO

The PACIO System comprises a variety of modules for digital, analog and temperature signals as well as communication interfaces. The modules connect directly to the controller via the built-in EtherCAT bus for local architectures and are extended to remote locations via the extender and bus coupler modules, thus supporting both local and distributed I/O architectures. PACIO communicates natively on the EtherCAT bus, therefore it provides the full functionality and throughput of high-speed EtherCAT to meet the most demanding real-time requirements.

For further information see Parker catalogue 192-122003.

Characteristics

The test unit EX00-M05 is suitable for testing and commissioning of all proportional and servo proportional valves with onboard electronics that are offered in this catalogue.

For easy on-site service all necessary cables are securely located inside of the rugged case. The test unit provides all command signal sources and measuring ports for concerted and time saving control and diagnosis of the valves. For operation of the hybrid regenerative valves an additional switchable 24 V output is available.

Features

- Control of valves incorporating integrated electronics and central plug acc. EN 175201-804 (6-pin + PE)
- Built-in fuses
- Cable set included
- Lockable rugged box

Characteristics / Ordering Code

Multi-station manifolds are used to save space when connecting several directional control valves to a common pressure and return line.

Diverse switching arrangements are possible in combination with sandwich and directional control valves.

Features

- Very low pressure drop due to large drilling parameters.
- P- and T-ports on both faces.
- Also available with gauge ports G¹/₄.

Characteristics / Ordering Code

Cartridge manifold blocks are bodies for 2/2-way slip-in cartridge valves. They are used in systems with only one cartridge valve without the need to design a specific manifold block.

The pilot ports X and Y can either be connected to A and B or vice versa by changing the mounting position of the cartridge cover.

The wide range of Parker slip-in cartridge valves allows to design solutions for all hydraulic requirements.

Features

- Flanges SAE62 respectively CETOP square flange
- 2 options for pilot oil supply and drain
- 6 sizes

Cartridge manifold blocks are supplied with a set of plugs and orifices.

The adaptor plates A10 and sandwich plates H10 allow energy saving circuits for differential cylinders using the following directional control valves NG10:

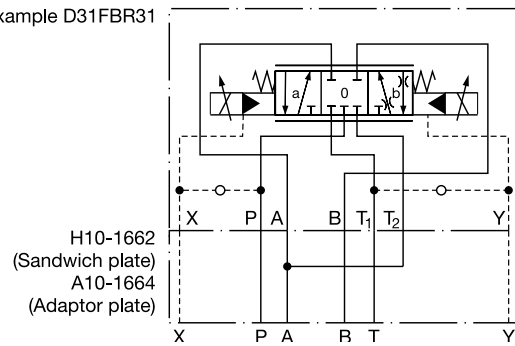

- | | | |
|---------|--------|---------|
| D3DWR* | D3FBR* | D31FBR* |
| D31NWR* | D3FPR* | D31FCR* |
| | | D31FPR* |

Features

- To be used in combination with the above-mentioned valves. See also series D31NWR in chapter 2 and series D3FB, D3FP, D31FB, D31FC and D31FP in chapter 3
- Port T1 is used as single tank port. Port T2 is separated from port T1 by the elimination of the tank bridge and is used for regeneration into the A port
- The circuit conception can be integrated into the manifold block as well

Regenerative function

Example D31FBR31

Hybrid function

Example D31FBR31

NG10 body without tank bridge – example D31FPR
T2 used as regenerative port.

¹⁾ The tightening torques refer to counter material steel, cast iron and SG iron by usage of impact wrenchs (with torsion bar) and impulse tools. The plugs have to be screwed in slightly oiled in bodys respectively blocks.

For aluminium plugs the specified torque above has to be reduced to one third.

For aluminium blocks should be used 75 % of specified above.

Characteristics / Ordering Code

The pressure gauge selector valve allows to connect up to 5 or 10 measuring points to one pressure gauge. When measuring is completed, the gauge is pressure-relieved to prevent it from being damaged by pressure surges. The accuracy and life time of the pressure gauge are thus increased considerably.

Design

Pressure gauge selector valve with locking, pressure-relieving piston. Measuring point selection by marked rotary handle and graduated dial.

Function

To select one of the measuring points from 1 to 5 or 1 to 10, the rotary handle is pulled out fully, and turned to the left or right. When the measuring point is selected by means of the handle marking and the dial, the handle is pushed in and the pressure gauge loaded with the pressure present. The piston is locked in the measuring position by a catch. When measuring is completed, the handle is pulled out, to relieve the pressure gauge via the drain line.

Features

- 5 or 10 measuring positions optional
- Extends the service life of the manometer by unloading the pressure

Mounting opening

Characteristics / Ordering Code

The electro-hydraulic pressure switch provides an electric signal when the sensed pressure goes above or below the selected setting.

Function

The spring loaded piston is hydraulically dampened. The PSB provides a very accurate hysteresis between the switching points (see diagram).

The required operating pressure is adjusted by the set-screw. Unauthorised adjustments can be prevented by the optional cylinder lock. The electric element is a micro switch with snap-action contact. Three terminals permit application as "On", "Off" or "Changeover" switch.

The electrical connection is made with a 3-pole plug-in connector to EN 175301-803 with ground.

Note

For inductive DC loads a spark discharger should be used to increase service life.

Features

- Flange or pipe mounting
- 4 pressure ranges
- Can be used as opener or closer
- Cylinder lock optional

Characteristics

- Compact
- Rugged
- Reliable
- Easy operation
- Long-term stability
- Excellent interference resistance
- Metal housing
- High protection class
- Many variants
- Rotatable
- Analogue output
- Password
- MPa, bar, psi

The Pressure Controller combines the functions of a pressure switch, a pressure sensor and a display instrument:

- Pressure display (manometer)
- Switching outputs
- Analogue signal

Simple operation, compact design and high reliability are the most important features of the SCPSD. The Pressure Controller offers excellent technical performance and optimum pressure management. It is ideal for permanent use in industrial applications.

Easy to operate

Parameter setting is carried out via the keys or with a programming module.

High functionality

Every switching output can be set individually:

- Normally closed/normally open contacts
- On and off switching pressures
- Delay times
- Hysteresis/window function
- Damping

Intelligent settings which are not possible with a mechanical switch can be achieved with these convenient switch functions. Several switches can be replaced by a single controller.

The analogue output is individually settable

- 0/4...20 mA switchable
- Settable initial pressure
- Settable final pressure

Reliable/safe

Pressure is captured by a measuring cell with long-term stability. Any functional error is monitored and can be processed in accordance with DESINA. Thanks to a password, unauthorized change of parameters is prevented.

Rugged

The housing is made of metal and is resistant to humidity, shock and vibrations. The electronics are protected from reverse polarity, overvoltage and short circuits.

Everything within view

The large illuminated display is readable even from a considerable distance. Pressures are shown in MPa, bar or psi.

Optimum installation possibilities

With its compact design and excellent interference resistance the SCPSD is suitable for installation under critical conditions.

With its directionally settable housing, the display can always be read very easily.

Universal

Many versions are available to suit a wide variety of applications.

- Optical interface
- Switch status display

Everything in view

- Chamfered display
- Digital display
- Large
- Luminescent
- Display
- psi/bar/Mpa
- Actual pressure
- Minimum pressure
- Maximum pressure
- Switching points

Easy to operate

- 3 large keys
- Display of units

Pressure connection

- Stainless steel
- Measuring cell stable long-term
- Wide media tolerance

Rugged

- Metal housing
- Watertight
- High interference resistance
- Vibration resistant
- Shockproof

Flexible installation

- Compact
- Rotatable 290°

Thread

- Internal thread
- External thread

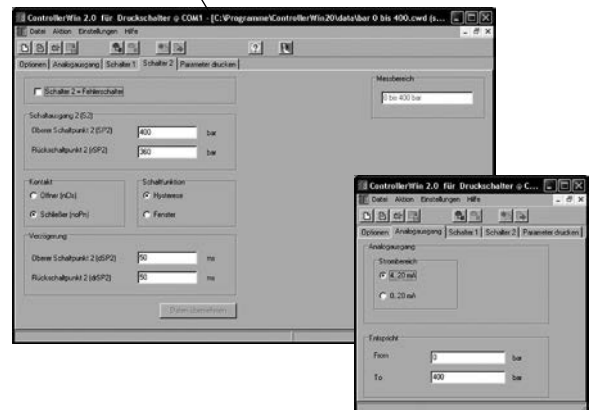

Tube clamp

- Safe mounting with a rugged SCSD-S27 clamp

Programming module

- Can be set with ControllerWIN software

Pressure range selection

With pressure switches the settable pressure is very relevant.

Because a 400 bar pressure switch shows the same resolution (1 bar) as a 600 bar pressure switch (also 1 bar), a 600 bar pressure switch can be deployed even at a smaller nominal pressure (eg. 315 bar).

The positive effects of this are the same accuracy with higher safety and fewer product variants.

Pressure intensifiers are used wherever a particular section of a hydraulic system has to be pressurized to a substantially higher pressure than the available primary pressure (clamping functions). With an intensification ratio of 1 : 4 (1 : 2, 1 : 6) it enables a cost-effective system solution especially in clamping applications, with primary pressures up to 125 bar. A pilot operated check valve can be flanged underneath the pressure intensifier for quick filling and decompression of the high pressure section.

Features

- Mounting pattern NG06, DIN 24 340 Design A, CETOP, ISO
- Check valve attachable to bottom flange
- High pressure up to 500 bar
- Volume flow formed with low pulsation
- Compact design

Design

Main functional parts of the pressure intensifier: piston, rocker mechanism, slide valve with lock, 4 check valves which separate the high pressure section from the low pressure section, check valve in the tank port to partition of the tank section from the primary pressure.

Function

After the high pressure section is filled with oil, (e.g. extension of a clamping cylinder), the pressure intensifier begins operation: The low pressure moves the intensifier piston because of the surface ratio and compresses the oil column in the high pressure section.

At the end of the intensifier's piston stroke, the rocker mechanism switches the directional slide valve to the crossed switching position, and the intensifier piston pumps oil from the piston rod area into the high pressure section. The process repeats itself until the pressure ratio corresponding to the surface ratio has led to a balance of force on the intensifier piston.

The pressure intensifier switches itself off and immediately on again when the high pressure (e.g. due to external leakage) begins to drop (pay attention to the flow characteristic). The switching speed of the slide valve is dependent on the operating speed of the intensifier piston.

Note

- To avoid exceeding the admissible maximum pressure, a pressure relief or pressure control valve must be fitted on the primary side (pressure setting, max. 125 bar / 1 : 4, max. 250 bar / 1 : 2 or max. 83 bar / 1 : 6).
- There must be no pressure peak on the primary side when operating in the maximum pressure range.
- It is recommended to mount a 10µm filter on the primary side to ensure damage-free operation.
